iv Introduction

Using this Manual

To quickly locate information about the vehicle, use the Index in the back of the manual. It is an alphabetical list of what is in the manual and the page number where it can be found.

Danger, Warnings, and Cautions

Warning messages found on vehicle labels and in this manual describe hazards and what to do to avoid or reduce them.

Danger indicates a hazard with a high level of risk which will result in serious injury or death.

Warning or Caution indicates a hazard that could result in injury or death.

⚠️ WARNING

These mean there is something that could hurt you or other people.

Notice: This means there is something that could result in property or vehicle damage. This would not be covered by the vehicle's warranty.

⚠️ WARNING

A circle with a slash through it is a safety symbol which means “Do Not,” “Do not do this,” or “Do not let this happen.”

Symbols

The vehicle has components and labels that use symbols instead of text. Symbols are shown along with the text describing the operation or information relating to a specific component, control, message, gauge, or indicator.

📖: This symbol is shown when you need to see your owner manual for additional instructions or information.

🔧: This symbol is shown when you need to see a service manual for additional instructions or information.
### Vehicle Symbol Chart

Here are some additional symbols that may be found on the vehicle and what they mean. For more information on the symbol, refer to the Index.

Initial Drive Information

This section provides a brief overview about some of the important features that may or may not be on your specific vehicle.

For more detailed information, refer to each of the features which can be found later in this owner manual.

Remote Keyless Entry (RKE) System

The RKE transmitter will work up to 20 m (65 ft) away from the vehicle.

Press the key release button to extend the key blade. The key can be used for the ignition and all locks.

Press 1 to unlock the driver door or all doors.

Press 1 to lock all doors.

Lock and unlock feedback can be personalized. See Vehicle Personalization on page 5-46.

Press and hold  to open the trunk.

Press and release  to locate the vehicle.

Press and hold  for at least two seconds to sound the panic alarm.

Press  again to cancel the panic alarm.

See Keys on page 2-2 and Remote Keyless Entry (RKE) System Operation on page 2-3.
Remote Vehicle Start

For vehicles with this feature, the engine can be started from outside the vehicle.

Starting the Vehicle

1. Aim the RKE transmitter at the vehicle.
2. Press and release Ơ.
3. Immediately after completing Step 2, press and hold Ơ until the turn signal lamps flash, or for about two seconds if the vehicle is not in view.

When the engine starts, the parking lamps will turn on and remain on as long as the engine is running. The doors will be locked and the climate control system may come on.

The engine will continue to run for 10 minutes. Repeat the steps for a 10-minute time extension. Remote start can be extended only once.

Canceling a Remote Start

To cancel a remote start, do one of the following:
• Aim the RKE transmitter at the vehicle and press and hold Ơ until the parking lamps turn off.
• Turn on the hazard warning flashers.
• Turn the vehicle on and then off.

See Remote Vehicle Start on page 2-5.

Door Locks

To lock or unlock a door:
• To lock the door from the inside, use the door lock knob on the top of the door.
• To unlock the door from inside, pull the handle once. Pulling the handle again unlatches the door.

From the outside turn the key clockwise or counterclockwise, or press Ơ or Ơ on the Remote Keyless Entry (RKE) transmitter. See Door Locks on page 2-7 or Remote Keyless Entry (RKE) System Operation on page 2-3.

Power Door Locks

There is a power door lock switch on the instrument panel and on the front door panels.
Ơ : Press to lock the doors.
Ơ : Press to unlock the doors.

See Power Door Locks on page 2-8.

Trunk Release

The trunk may be opened by pressing the remote trunk release button located on the lower portion of the driver door or Ơ on the Remote Keyless Entry (RKE) transmitter. See Trunk on page 2-9.
1-6  In Brief

Seat Adjustment

Manual Seats

To adjust the seat, if equipped:
1. Lift the handle under the seat to unlock it.
2. Slide the seat and release the handle.
3. Try to move the seat back and forth to be sure it is locked in place.

See Seat Adjustment on page 3-3.

Power Seats

To adjust the seat, if equipped:
• Move the seat forward or rearward by sliding the horizontal control forward or rearward.

• Raise or lower the front part of the seat cushion by moving the front of the horizontal control up or down.
• Raise or lower the entire seat by moving the entire horizontal control up or down.

See Power Seat Adjustment on page 3-4.

To raise or recline the seatback, tilt the vertical control forward or rearward. See Reclining Seatbacks on page 3-4.
Heated Seats

If available, press \( L \) or \( M \) to turn on the heated seat. A light indicates this feature is on.

To operate, the engine must be running.

Press the button once for the highest setting. With each press of the button, the heated seat will change to the next lower setting, and then the off setting. Two lights indicate the highest setting, and one light indicates the lowest.

See Heated Front Seats on page 3-6.

Head Restraint Adjustment

Do not drive until the head restraints for all occupants are installed and adjusted properly.

To achieve a comfortable seating position, change the seatback recline angle as little as necessary while keeping the seat and the head restraint height in the proper position.

See Head Restraints on page 3-2 and Seat Adjustment on page 3-3.

Safety Belts

Refer to the following sections for important information on how to use safety belts properly:

- Safety Belts on page 3-8.
- How to Wear Safety Belts Properly on page 3-9.
- Lap-Shoulder Belt on page 3-11.
- Lower Anchors and Tethers for Children (LATCH System) on page 3-41.
Passenger Sensing System

The passenger airbag status indicator will be visible on the overhead console when the vehicle is started. See Passenger Sensing System on page 3-25 for more information.

Mirror Adjustment

To adjust each mirror:
1. Press the switch to select the driver or passenger side mirror.
2. Press one of the four sides on the \( \text{control pad} \) to adjust the mirror.
3. Adjust each outside mirror so that a little of the vehicle and the area behind it can be seen.

See Power Mirrors on page 2-13.

Coupe Shown, Convertible Similar

Vehicles with outside power mirrors have controls located on the driver door armrest.

United States

Canada and Mexico

The passenger sensing system will turn off the right front passenger frontal airbag under certain conditions. The driver airbag and roof-rail airbags, if equipped, are not affected by the passenger sensing system.
Interior
Adjust the inside rearview mirror for a clear view of the area behind your vehicle. To avoid glare of the headlamps from behind, push the tab forward for daytime and pull it for nighttime use. See Manual Rearview Mirror on page 2-14.

On vehicles with an automatic dimming inside rearview mirror. The mirror reduces glare from the headlamps of the vehicle behind you. The dimming feature comes on and the indicator light illuminates each time the vehicle is started. See Automatic Dimming Rearview Mirror on page 2-14.

Steering Wheel Adjustment
To adjust the steering wheel:
1. Pull the lever down.
2. Move the steering wheel up or down.
3. Pull or push the steering wheel closer or away from you.
4. Pull the lever up to lock the steering wheel in place.
Do not adjust the steering wheel while driving.

Interior Lighting
Dome Lamps
The dome lamp buttons are located overhead near the rearview mirror.
To change the settings, press the following:

**: Turns the lamp off, even when a door is open.
**: Turns the lamp on automatically when a door is opened.
**: Turns the lamp on.

For more information on interior lighting, see Instrument Panel Illumination Control on page 6-6.
1-10  In Brief

Exterior Lighting

![Exterior Lighting Control](image)

The exterior lamps control is on the instrument panel, on the outboard side of the steering wheel.

The exterior lamps control has four positions:

- **P**: Briefly turn to this position to turn the automatic light control off or on again. When released, the control returns to the AUTO position.

- **AUTO**: Use to automatically turn on the headlamps, parking lamps, taillamps, sidemarker lamps, license plate lamps, and instrument panel lights.

- **D**: Use to turn on the parking lamps together with the taillamps, sidemarker lamps, license plate lamps, and instrument panel lights.

- **F**: Use to turn on the headlamps together with the parking lamps, taillamps, sidemarker lamps, license plate lamps, and instrument panel lights.

- **#: Use to turn the fog lamps on or off. The fog lamps come on together with the parking lamps, taillamps, sidemarker lamps, license plate lamps, and instrument panel lights.

For more information, see:

- Exterior Lamp Controls on page 6-1.
- Daytime Running Lamps (DRL) on page 6-3.
- Front Fog Lamps on page 6-5.

Windshield Wiper/Washer

The windshield wiper lever is on the side of the steering column. With the ignition in ACC/ACCESSORY or ON/RUN, move the windshield wiper lever to select the wiper speed.

- **2**: Use for fast wipes.
- **1**: Use for slow wipes.
**In Brief 1-11**

**Climate Controls**

The heating, cooling, defrosting, and ventilation for the vehicle can be controlled with this system.

- **A. Fan Control**
- **B. Heated Seats**
- **C. Temperature Control**
- **D. Air Delivery Mode Controls**
- **E. Air Conditioning**
- **F. Defrost**
- **G. Rear Window Defogger**
- **H. Recirculation**

See *Climate Control Systems on page 8-1.*

---

- Move the lever up to \( \uparrow \) for adjustable interval wipes, then turn the band up for more frequent wipes or down for less frequent wipes.

- Use to turn the windshield wipers off.

- To use for a single wipe, briefly move the wiper lever down. For several wipes, hold the wiper lever down.

- Pull the windshield wiper lever toward you to spray windshield washer fluid and activate the wipers.

See *Windshield Wiper/Washer on page 5-3.*
1-12 In Brief

Transmission

Automatic Transmission

Tap Shift
Tap Shift allows the driver to manually control the automatic transmission. To use Tap Shift, the shift lever must be in M (Manual Mode) or D (Drive). Vehicles with this feature have indicators on the steering wheel. The controls are on the back of the steering wheel. Tap the left control to downshift, and the right control to upshift. A Driver Information Center (DIC) message indicates the gear the vehicle is in.

Electronic Range Select (ERS) Mode
Vehicles with axle code GW8 have an ERS mode. ERS mode allows you to choose the top-gear limit of the transmission with fully automatic gear selection. This can help control the vehicle’s speed while driving downhill or towing a trailer. The vehicle has an electronic shift position indicator within the instrument panel cluster. When using the ERS mode a number will display next to the M, indicating the current maximum gear allowed.

To use this feature:
1. Move the shift lever to M (Manual Mode).
2. Press the plus/minus buttons located on the back of the steering wheel, to increase or decrease the gear range available.

See Manual Mode on page 9-34.

Manual Transmission

One to Four Shift Message (V8 Only)

When this message comes on, you can only shift from 1 (First) to 4 (Fourth) instead of 1 (First) to 2 (Second). The message will be displayed in the Driver Information Center. See Manual Transmission on page 9-37.
Vehicle Features

Radio(s)

**VOL/.volume**: Press to turn the system on and off. Turn to increase or decrease the volume.

**RADIO/BAND**: Press to choose between FM, AM, or XM™, if equipped.

**MENU/SELECT**: Turn to select radio stations.

**SEEK**: Press to seek the previous radio station or track.

**SEEK**: Press to seek the next radio station or track.

**Buttons 1–6**: Press to save and select favorite stations.

**INFO**: Press to show available information about the current station or track.

For more information about these and other radio features, see Overview on page 7-3.

Storing a Favorite Station

Stations from all bands can be stored in the favorite lists in any order. Up to six stations can be stored in each favorite page and the number of available favorite pages can be set.

To store the station to a position in the list, press the corresponding numeric button 1–6 until the station can be heard again.

For more information, see “Storing and Retrieving Favorites” in AM-FM Radio on page 7-8.

Setting the Clock

Adjusting the Time

The clock menu can only be used with the radio on while in ON/RUN or ACC/ACCESSORY.

1. Press the CONFIG button.
2. Select Time and Date Settings.
3. Select Set Time.
4. Turn the MENU/SELECT knob to adjust the highlighted value.
5. Press the MENU/SELECT knob to select the next value.
6. To save the time or date and return to the Time and Date Settings menu, press the BACK button at any time or press the MENU/SELECT knob after adjusting the minutes.

Setting the 12/24 Hour Format

1. Press the CONFIG button.
2. Select Time and Date Settings.
3. Highlight 12/24 Hour Format.
4. Press the MENU/SELECT knob to select the 12 hour or 24 hour display format.

For detailed instructions on setting the clock, see Clock on page 5-5.
1-14 In Brief

Satellite Radio
Vehicles with an XM™ satellite radio tuner and a valid XM satellite radio subscription can receive XM programming.

XM Satellite Radio Service
XM is a satellite radio service based in the 48 contiguous United States and 10 Canadian provinces. XM satellite radio has a wide variety of programming and commercial-free music, coast to coast, and in digital-quality sound. A fee is required to receive the XM service.

Refer to:
- www.xmradio.com or call 1-800-929-2100 (U.S.).
- www.xmradio.ca or call 1-877-438-9677 (Canada).

See Satellite Radio on page 7-10.

Portable Audio Devices
Some vehicles have a 3.5 mm (1/8 in) auxiliary input and a USB port located in the center console. External devices such as iPods®, laptop computers, MP3 players, CD changers, and USB drives may be connected, depending on the audio system.

See Auxiliary Devices on page 7-17.

Bluetooth®
The Bluetooth system allows users with a Bluetooth-enabled cell phone to make and receive hands-free calls using the vehicle audio system and controls.

The Bluetooth-enabled cell phone must be paired with the in-vehicle Bluetooth system before it can be used in the vehicle. Not all phones will support all functions.

See Bluetooth (Voice Recognition) on page 7-28 or Bluetooth (Infotainment Controls) on page 7-25 or Bluetooth (Overview) on page 7-23.

Steering Wheel Controls
Some audio steering wheel controls can be adjusted at the steering wheel.

Press to interact with the available Bluetooth or OnStar systems.
 swallowed

\boxed{\text{Press to silence the vehicle speakers only. Press again to turn the sound on. For vehicles with OnStar or Bluetooth systems, press to reject an incoming call, or end a current call.}}

\boxed{\text{SRC } \downarrow\text{ : Press to select an audio source.}}

Turn up or down to select the next or previous favorite radio station, CD, or MP3 track.

\boxed{\text{+ } \downarrow\text{ : Press + to increase the volume; press – to decrease the volume.}}

\boxed{\text{See Steering Wheel Controls on page 5-2.}}

\boxed{\text{Cruise Control}}

\boxed{\text{SET/- : Move the thumbwheel down to set a speed or to make the vehicle decelerate.}}

\boxed{\text{See Cruise Control on page 9-50.}}

\boxed{\text{Press to disengage cruise control without erasing the set speed from memory.}}

\boxed{\text{The cruise control buttons are located on the outboard side of the steering wheel.}}

\boxed{\text{Press to turn the cruise control system on and off. An indicator light comes on in the instrument panel cluster.}}
1-16 In Brief

Driver Information Center (DIC)
The DIC display is located in the center of the instrument panel cluster. It shows the status of many vehicle systems. The controls for the DIC are located on the turn signal lever.

A. **SET/CLR:** Press to set or clear the menu item when it is displayed.

B. **△ / ▼:** Use the thumbwheel to scroll through the items in each menu.

C. **MENU:** Press to display the Trip/Fuel menu and the Vehicle Information menu. This button is also used to return to or exit the last screen displayed on the DIC.

See Driver Information Center (DIC) on page 5-26.

Ultrasonic Parking Assist
If available, the Ultrasonic Rear Parking Assist (URPA) system uses sensors on the rear bumper to assist with parking and avoiding objects while in R (Reverse). It operates at speeds less than 8 km/h (5 mph). URPA uses audible beeps to provide distance and system information.

Keep the sensors on the vehicle's rear bumper clean to ensure proper operation.

See Ultrasonic Parking Assist on page 9-52.

Power Outlets
The vehicle has two accessory power outlets; one is located below the climate control system and the other is inside the center console storage. They can be used to plug in electrical equipment, such as a cell phone or an MP3 player.

The accessory power outlets do not work when the key is removed from the ignition and the driver door is opened. This helps to preserve the battery life of the vehicle.

See Power Outlets on page 5-5.
Universal Remote System

This system provides a way to replace up to three remote control transmitters used to activate devices such as garage door openers, security systems, and home automation devices.

Read the instructions completely before attempting to program the Universal Remote system. Because of the steps involved, it may be helpful to have another person available to assist you with programming the Universal Remote system.

See Universal Remote System on page 5-49.

Sunroof

The ignition must be in ON/RUN, ACC/ACCESSORY, or Retained Accessory Power (RAP) to operate the sunroof. See Retained Accessory Power (RAP) on page 9-25.

The sunroof switches are on the overhead console.

Open/Close: Press and hold the rear or front of the switch to open or close the sunroof.

Express-open: Press and release the rear of the switch two times to express-open the sunroof.

Vent: Press and release the rear of the switch to vent the sunroof.

Convertible

If equipped, the convertible top can be lowered and stowed under the tonneau cover behind the rear seat. For step-by-step instructions, see Convertible Top on page 2-19.
Performance and Maintenance

Traction Control System (TCS)

The traction control system limits wheel spin. The system turns on automatically every time the vehicle is started.

- To turn off traction control, press and release the TCS/StabiliTrak button located on the console in front of the shift lever. *illuminates.
- Press the TCS/StabiliTrak button again to turn traction control back on.

See Traction Control System (TCS) on page 9-41.

StabiliTrak® System

StabiliTrak assists with directional control of the vehicle in difficult driving conditions. The system turns on automatically every time the vehicle is started.

- To turn off both traction control and electronic stability control, press and hold the TCS/StabiliTrak button located on the console in front of the shift lever. * and * illuminate.
- Press the TCS/StabiliTrak button again to turn on both systems.

See StabiliTrak® System on page 9-43.

Tire Pressure Monitor

This vehicle may have a Tire Pressure Monitor System (TPMS).

The TPMS warning light alerts you to a significant loss in pressure of one of the vehicle’s tires. If the warning light comes on, stop as soon as possible and inflate the tires to the recommended pressure shown on the Tire and Loading Information label. See Vehicle Load Limits on page 9-14. The warning light will remain on until the tire pressure is corrected.
During cooler conditions, the low tire pressure warning light may appear when the vehicle is first started and then turn off. This may be an early indicator that the tire pressures are getting low and the tires need to be inflated to the proper pressure.

The TPMS does not replace normal monthly tire maintenance. It is the driver’s responsibility to maintain correct tire pressures.

See Tire Pressure Monitor System on page 10-64.

**Tire Sealant and Compressor Kit**

This vehicle may come with a spare tire and tire changing equipment or a tire sealant and compressor kit. The kit can be used to temporarily seal small punctures in the tread area of the tire.

See Tire Sealant and Compressor Kit on page 10-78 for complete operating information.

If the vehicle came with a spare tire and tire changing equipment, see If a Tire Goes Flat on page 10-77.

**Engine Oil Life System**

The engine oil life system calculates engine oil life based on vehicle use and displays the CHANGE ENGINE OIL SOON message when it is time to change the engine oil and filter. The oil life system should be reset to 100% only following an oil change.

**Resetting the Oil Life System**

1. Turn the ignition to ON/RUN with the engine off.
2. Fully press and release the accelerator pedal three times within five seconds.

See Engine Oil Life System on page 10-16.

**Driving for Better Fuel Economy**

Driving habits can affect fuel mileage. Here are some driving tips to get the best fuel economy possible.

- Avoid fast starts and accelerate smoothly.
- Brake gradually and avoid abrupt stops.
- Avoid idling the engine for long periods of time.
- When road and weather conditions are appropriate, use cruise control.
- Always follow posted speed limits or drive more slowly when conditions require.
- Keep vehicle tires properly inflated.
- Combine several trips into a single trip.
1-20 In Brief

- Replace the vehicle’s tires with the same TPC Spec number molded into the tire’s sidewall near the size.
- Follow recommended scheduled maintenance.

Keys

⚠️ WARNING

Leaving children in a vehicle with the ignition key is dangerous for many reasons. Children or others could be badly injured or even killed. They could operate the power windows or other controls or even make the vehicle move. The windows will function with the keys in the ignition and children could be seriously injured or killed if caught in the path of a closing window. Do not leave the keys in a vehicle with children.

The key that is part of the Remote Keyless Entry (RKE) transmitter can be used for the ignition and all locks.

If it becomes difficult to turn the key, inspect the key blade for debris. Periodically clean with a brush or pick.

Press the key release button on the RKE transmitter to extend the key blade. Press the button and the key blade to retract the key.

See your dealer if a new key is needed.

Notice: If the keys get locked in the vehicle, it may have to be damaged to get them out. Always carry a spare key.

If locked out of the vehicle, see Roadside Assistance Program (U.S. and Canada) on page 13-7 or Roadside Assistance Program (Mexico) on page 13-10.
With an active OnStar subscription, an OnStar Advisor may remotely unlock the vehicle. See OnStar Overview on page 14-1.

Remote Keyless Entry (RKE) System

If there is a decrease in the RKE operating range:
- Check the distance. The transmitter may be too far from the vehicle.
- Check the location. Other vehicles or objects may be blocking the signal.
- Check the transmitter's battery. See “Battery Replacement” later in this section.
- If the transmitter is still not working correctly, see your dealer or a qualified technician for service.

Remote Keyless Entry (RKE) System Operation

The Remote Keyless Entry (RKE) transmitter will work up to 20 m (65 ft) away from the vehicle.

Other conditions can affect the performance of the transmitter. See Remote Keyless Entry (RKE) System on page 2-3.

RKE without Remote Start Shown

The following may be available:

- (Lock): Press to lock all doors.

The turn signal indicators may flash and/or the horn may sound to indicate locking. See “Locking Feedback” under Vehicle Personalization on page 5-46.

If the passenger door is open when is pressed, all doors lock.

If the driver door is open when is pressed, all doors lock except the driver door, if enabled through vehicle personalization.
2-4 Keys, Doors, and Windows

Pressing \( \text{Q} \) may also arm the theft-deterrent system. See Anti-theft Alarm System on page 2-11.

\( \text{K} \) (Unlock): Press to unlock the driver door or all doors. See “Door Unlock Options” under Vehicle Personalization on page 5-46.

The turn signal indicators may flash and/or the horn may sound to indicate unlocking. See “Unlock Feedback (Lights)” under Vehicle Personalization on page 5-46.

Pressing \( \text{K} \) will disarm the theft-deterrent system. See Anti-theft Alarm System on page 2-11.

\( \text{Q} \) (Remote Trunk Release): Press and hold to unlock the trunk.

\( \text{V} \) (Vehicle Locator/Panic Alarm): Press and release one time to locate the vehicle. The exterior lamps flash and the horn chirps.

Press and hold \( \text{V} \) for at least two seconds to sound the panic alarm. The horn sounds and the turn signals flash until \( \text{V} \) is pressed again or the key is placed in the ignition and turned to ON/RUN.

\( \text{Q} \) (Remote Vehicle Start): For vehicles with this feature, press \( \text{Q} \) and then \( \text{Q} \) to start the engine from outside the vehicle using the RKE transmitter. See Remote Vehicle Start on page 2-5 for additional information.

The buttons on the keys are disabled when there is a key in the ignition.

Programming Transmitters to the Vehicle

Only RKE transmitters programmed to this vehicle will work. If a transmitter is lost or stolen, a replacement can be purchased and programmed through your dealer. When the replacement transmitter is programmed to this vehicle, all remaining transmitters must also be reprogrammed. Any lost or stolen transmitters will no longer work once the new transmitter is programmed.
Battery Replacement

The battery is not rechargeable. To replace the battery:

1. Extend the key blade and open the battery cover on the back of the transmitter by prying it with a finger.

2. Remove the used battery by pushing on the battery and sliding it toward the key blade.

3. Insert the new battery, positive side facing up. Push the battery down until it is held in place. Replace with a CR2032 or equivalent battery.

4. Snap the battery cover back on to the transmitter.

Remote Vehicle Start

Your vehicle may have this feature which allows you to start the engine from outside the vehicle.

Remote Vehicle Start: This button will be on the RKE transmitter if you have remote start.

During a remote start the climate control system will turn on with the fan speed, air delivery mode, and temperature settings that the system was set to when the vehicle was last turned off. If the fan is set to Off, the climate control system will not turn on.

Laws in some local communities may restrict the use of remote starters. For example, some laws may require a person using remote start to have the vehicle in view. Check local regulations for any requirements.

Other conditions can affect the performance of the transmitter. See Remote Keyless Entry (RKE) System on page 2-3.

Starting the Vehicle

To start the engine using the remote start feature:

1. Aim the RKE transmitter at the vehicle.

2. Press and release $\text{REMOTE}$. 

3. Immediately after completing Step 2, press and hold $\text{REMOTE}$ until the turn signal lamps flash, or for about two seconds if the vehicle is not in view.

When the engine starts, the parking lamps will turn on and remain on as long as the engine is running. The vehicle's doors will be locked and the climate control system may come on.

The engine will continue to run for 10 minutes. Repeat the steps for a 10-minute time extension. Remote start can be extended only once.

Insert the key and turn it to ON/RUN before driving.
Extending Engine Run Time

For a 10-minute extension, repeat Steps 1–3 while the engine is still running. The remote start can only be extended once.

When the remote start is extended, the second 10 minutes will start immediately.

For example, if the vehicle has been running for five minutes, and 10 minutes are added, the engine will run for a total of 15 minutes.

A maximum of two remote starts or remote start attempts are allowed between ignition cycles.

The vehicle's ignition switch must be turned to ON/RUN and then back to LOCK/OFF using the key before the remote start procedure can be used again.

Canceling a Remote Start

To cancel a remote start, do one of the following:

- Aim the RKE transmitter at the vehicle and press and hold \( \text{cancel} \) until the parking lamps turn off.
- Turn on the hazard warning flashers.
- Turn the vehicle on and then off.

Conditions in Which Remote Start Will Not Work

The remote start will not operate if:

- The key is in the ignition.
- The hood is not closed.
- The hazard warning flashers are on.
- There is an emission control system malfunction.
- The engine coolant temperature is too high.
- The oil pressure is low.
- Two remote vehicle starts, or a single remote start with an extension, have already been used.
- The vehicle is not in P (Park).
Door Locks

**WARNING**

Unlocked doors can be dangerous.

- Passengers, especially children, can easily open the doors and fall out of a moving vehicle. The chance of being thrown out of the vehicle in a crash is increased if the doors are not locked. So, all passengers should wear safety belts properly and the doors should be locked whenever the vehicle is driven.

(Continued)

**WARNING (Continued)**

- Young children who get into unlocked vehicles may be unable to get out. A child can be overcome by extreme heat and can suffer permanent injuries or even death from heat stroke. Always lock the vehicle whenever leaving it.
- Outsiders can easily enter through an unlocked door when slowing or stopping the vehicle. Lock the doors to help prevent this from happening.

**Manual Door Locks**

Lock the doors from inside the vehicle by pressing down on the door lock knob on the top of the door.

The doors can also be unlocked from the inside by pulling the door handle. Pulling the door handle again unlatches the door.

Only the driver door has a key cylinder. Unlock the door from the outside by turning the key counterclockwise.

Lock all doors from the outside by turning the key clockwise.
2-8  Keys, Doors, and Windows

The door lock cylinder turns freely when either the wrong key is used, or the correct key is not fully inserted. The free turning door lock feature prevents the lock from being forced open.

To reset the lock, turn it to the vertical position with the correct key fully inserted. Remove the key and insert it again.

If this does not reset the lock, turn the key half-way around in the cylinder and repeat the reset procedure.

Power Door Locks

- **Q (Lock):** Press to lock the doors.
- **K (Unlock):** Press to unlock the doors.

To program the power door locks, see *Vehicle Personalization on page 5-46*.

Lockout Protection

If the power door lock switch is pressed when the key is in the ignition and a door is open, all the doors will lock and only the driver door will unlock. If the doors are closed, they can be locked by using the Remote Keyless Entry (RKE) transmitter. Be sure to remove the key from the ignition when locking the vehicle. This feature can be overridden by pressing **Q** on the RKE transmitter or by pressing the power door lock switch a second time.

This feature can be disabled. See “Power Door Locks” in *Vehicle Personalization on page 5-46*. 
Doors

Trunk

WARNING

Exhaust gases can enter the vehicle if it is driven with the liftgate, trunk/hatch open, or with any objects that pass through the seal between the body and the trunk/hatch or liftgate. Engine exhaust contains carbon monoxide (CO) which cannot be seen or smelled. It can cause unconsciousness and even death.

If the vehicle must be driven with the liftgate, or trunk/hatch open:

• Close all of the windows.
• Fully open the air outlets on or under the instrument panel.

WARNING (Continued)

• Adjust the climate control system to a setting that brings in only outside air and set the fan speed to the highest setting. See “Climate Control Systems” in the Index.
• If the vehicle has a power liftgate, disable the power liftgate function.

For more information about carbon monoxide, see Engine Exhaust on page 9-29.

Remote Trunk Release

To open the trunk from the outside of the vehicle, press on the Remote Keyless Entry (RKE) transmitter.

From inside the vehicle, press on the lower portion of the driver door.
2-10 Keys, Doors, and Windows

Emergency Trunk Release Lock (Convertible Only)

If the trunk lid cannot be opened using the RKE transmitter or the trunk release button:

1. Locate the manual release beside the rear seatback cushion on the driver side.
2. Pull the cushion to the side, then fully insert the key into the lock cylinder.
3. Firmly turn the key clockwise to unlatch the trunk lid.
4. Remove the key.

Emergency Trunk Release Handle (Coupe Only)

Notice: Do not use the emergency trunk release handle as a tie-down or anchor point when securing items in the trunk as it could damage the handle. The emergency trunk release handle is only intended to aid a person trapped in a latched trunk, enabling them to open the trunk from the inside.

There is an emergency trunk release handle located inside the trunk on the liner, near the trunk latch. On some vehicles, the release handle can be accessed by folding the rear seatback down. See Rear Seats on page 3-7.

Pull the release handle to open the trunk from the inside.

Return the release handle to its original position for proper operation.
Vehicle Security
This vehicle has theft-deterrent features; however, they do not make it impossible to steal.

Anti-theft Alarm System
This vehicle has an anti-theft alarm system.

The security light is located on the instrument panel.

Arming the System
To arm the system, press 🟠 on the RKE transmitter.
The alarm automatically arms after about 30 seconds. The security light, located on the instrument panel, flashes.

Disarming the System
To disarm the system, do one of the following:

- Press 🟠 on the RKE transmitter.
- Turn the ignition to ON/RUN.
The security light stays on for approximately one second when the vehicle is disarming.

If the system is armed when there are people inside of the vehicle, pulling the door handle from the inside one time will unlock the door. Pulling the handle a second time will unlatch the door.

How the System Alarm is Activated
To activate the system if it is armed, open any door, the trunk, or hood. The horn will sound and the hazard warning flashers will flash.

How to Turn Off the System Alarm
To turn off the system alarm, do one of the following:

- Press 🟠 on the RKE transmitter.
- Turn the ignition to ON/RUN.
The theft-deterrent system is disarmed when the alarm is turned off.
2-12   Keys, Doors, and Windows

How to Detect a Tamper Condition

If the horn sounds and the turn signal lamps flash three times when \( \mathbf{1} \) is pressed, an attempted break-in has occurred while the system was armed. The vehicle may also display a message on the DIC. See Anti-theft Alarm System Messages on page 5-43 for more information.

Immobilizer

Immobilizer Operation

This vehicle has a passive theft-deterrent system.

The system does not have to be manually armed or disarmed.

The vehicle is automatically immobilized when the key is removed from the ignition.

The system is automatically disarmed when the vehicle is started with the correct key. The key uses a transponder that matches an immobilizer control unit in the vehicle and automatically disarms the system. Only the correct key starts the vehicle. The vehicle may not start if the key is damaged.

When trying to start the vehicle, the immobilizer light comes on briefly when the ignition is turned on.

If the engine does not start and the immobilizer light stays on, there is a problem with the system. Turn the ignition off and try again.

If the engine still does not start, and the key appears to be undamaged, try another ignition key.

If the engine still does not start and the light continues to stay on, try another key.

If the engine still does not start with the other key, the vehicle needs service. If the vehicle does start, the first key may be damaged. See your dealer who can service the theft-deterrent system and have a new key made.

Do not leave the key or device that disarms or deactivates the theft-deterrent system in the vehicle.

The immobilizer light, located in the instrument panel cluster, comes on if there is a problem with arming or disarming the theft-deterrent system. See Immobilizer Light on page 5-25.
Exterior Mirrors

Convex Mirrors

**WARNING**

A convex mirror can make things, like other vehicles, look farther away than they really are. If you cut too sharply into the right lane, you could hit a vehicle on the right. Check the inside mirror or glance over your shoulder before changing lanes.

The passenger side mirror is convex shaped. A convex mirror’s surface is curved so more can be seen from the driver seat.

Power Mirrors

**Coupe Shown, Convertible Similar**

Vehicles with outside power mirrors have controls located on the driver door armrest.

To adjust each mirror:

1. Press the switch to select the driver or passenger side mirror.
2. Press one of the four sides on the (control pad) to adjust the mirror.
3. Adjust each outside mirror so that a little of the vehicle and the area behind it can be seen.

Turn Signal Indicator

If the vehicle has a turn signal indicator on the mirror, an arrow on the mirror flashes in the direction of the turn or lane change.

Heated Mirrors

For vehicles with heated mirrors: (Rear Window Defogger): Press to heat the mirrors.

See “Rear Window Defogger” under Climate Control Systems on page 8-1.

Automatic Dimming Mirror

If the vehicle is equipped with an automatic dimming outside mirror on the driver side, the mirror will adjust for the glare of headlamps behind you.
2-14 Keys, Doors, and Windows

Interior Mirrors

Manual Rearview Mirror

Adjust the inside rearview mirror for a clear view of the area behind your vehicle. To avoid glare of the headlamps from behind, push the tab forward for daytime and pull it for nighttime use.

Vehicles with OnStar® have three control buttons at the bottom of the mirror. See your dealer for more information about OnStar and how to subscribe to it. See OnStar Overview on page 14-1.

Automatic Dimming Rearview Mirror

The vehicle may have an automatic dimming inside rearview mirror. Automatic dimming reduces the glare from the headlamps of the vehicle behind you. The dimming feature and the indicator light come on each time the vehicle is started.

Vehicles with OnStar have three control buttons located at the bottom of the mirror. See your dealer for more information about OnStar and how to subscribe to it. See OnStar Overview on page 14-1.

Cleaning the Mirror

Do not spray glass cleaner directly on the mirror. Use a soft towel dampened with water.

Windows

⚠️ WARNING

Leaving children, helpless adults, or pets in a vehicle with the windows closed is dangerous. They can be overcome by the extreme heat and suffer permanent injuries or even death from heat stroke. Never leave a child, a helpless adult, or a pet alone in a vehicle, especially with the windows closed in warm or hot weather.
Power Windows

The power window switches located on the driver door control all windows. The window switch on the passenger door is only for that window. Push the front of the switch down to open the window. Pull the switch up to close it.

The switches work when the ignition is in ON/RUN or ACC/ACCESSORY, or in Retained Accessory Power (RAP). See Retained Accessory Power (RAP) on page 9-25.

Window Indexing

This automatically lowers the window a small amount when the door is opened. When the door is closed, the window will raise fully.

If the vehicle loses power, you may need to reprogram the windows. Follow the procedure under "Programming the Power Windows" later in this section. If a message about the windows appears in the Driver Information Center (DIC), see Window Messages on page 5-45.

If the window freezes to the door, this feature may not work. To close a door with a frozen window, push the top of the window inward while closing the door so the top of the window goes under the roof seal.

Coupe Shown, Convertible Similar

The power window switches located on the driver door control all windows. The window switch on the passenger door is only for that window. Push the front of the switch down to open the window. Pull the switch up to close it.

The switches work when the ignition is in ON/RUN or ACC/ACCESSORY, or in Retained Accessory Power (RAP). See Retained Accessory Power (RAP) on page 9-25.
2-16 Keys, Doors, and Windows

Express Window Operation

Coupe and Convertible Top
The window switches have an express-up and down feature that raises or lowers the window without holding the switch. Pull the switch up or press it down all the way and release it. Stop the window by operating the switch in the same direction.

Convertible Top Only
To express-up a front window, the same side rear window must be closed.

To close all the windows, pull all window switches up fully and release within four seconds. This will result in the windows closing automatically.

Express Window Anti-Pinch Feature
When express-up is active, the window will auto-reverse if there is an obstruction or severe icing. The window returns to normal operation after the obstruction or condition is removed.

If conditions prevent a window from closing and it continues to auto-reverse, the window can be closed by having the ignition in ON/RUN and holding the window switch up until the window is closed.

Express Window Anti-Pinch Override

WARNING
If express override is activated, the window will not reverse automatically. You or others could be injured and the window could be damaged. Before you use express override, make sure that all people and obstructions are clear of the window path.

In an emergency, the anti-pinch feature can be overridden in a supervised mode. Hold the window switch all the way up to the second position. The window will rise for as long as the switch is held. Once the switch is released, the express mode is re-activated.

In this mode, the window can still close on an object in its path. Use care when using the override mode.
Programming the Power Windows

If the battery on the vehicle has been recharged or disconnected, or is not working, you may need to reprogram the windows for the express-up feature to work. Before reprogramming, replace or recharge the vehicle’s battery.

To program each front window:

1. With the ignition in ON/RUN, close all doors.
2. With the window partially open, pull the power window switch up until the window is fully closed.
3. Repeat Step 2 on all remaining windows.

The windows are now reprogrammed.

Sun Visors

Pull the sun visor down to block glare. Detach the sun visor from the center mount to pivot it to the side, if available.

Roof

Sunroof

On vehicles with a sunroof, the switch is located on the overhead console.

Express-open: Press and release the rear of the switch two times to express-open the sunroof.

Vent: Press and release the rear of the switch to vent the sunroof.

The sunroof only operates when the ignition is in ON/RUN or ACC/ACCESSORY, or if Retained Accessory Power (RAP) is active. See Retained Accessory Power (RAP) on page 9-25.

Open/Close: Press and hold the rear or front of the switch to open or close the sunroof.
Express Sunroof Operation

The sunroof can be opened without holding the switch down. Push the switch in the open direction until the second pause. The sunroof will fully open.

To stop the sunroof from moving, press either the open or close sunroof switch.

Press and release the back of the switch to open the sunroof to the vent position. Press it again to express-open the sunroof. To stop the sunroof from opening, press the switch again.

A deflector automatically raises when the sunroof is opened and retracts while the sunroof closes.

If the sunshade is closed, it opens automatically when the sunroof opens past the vented position.

Notice: Forcing the sunshade forward of the sliding glass panel may cause damage and the sunroof may not operate properly. Always close the glass panel before closing the sunshade.

To close the sunroof, press the front of the switch and hold it until the sunroof is closed. The sunroof will stop if the switch is released. Close the sunshade by hand.

The sunroof glass panel cannot be opened or closed if the vehicle has an electrical failure.

Dirt and debris may collect on the sunroof seal or in the track. This could cause an issue with sunroof operation or noise. It could also plug the water drainage system. Periodically open the sunroof and remove any obstacles or loose debris. Wipe the sunroof seal and roof sealing area using a clean cloth, mild soap, and water. Do not remove grease from the sunroof.
Convertible Top

Power Operation

A. Convertible Top
B. Tonneau Cover (In the Trunk)

To operate the convertible top use the following steps.

Notice: Leaving the convertible top down and exposing the interior of the vehicle to outdoor conditions may cause damage. Always close the convertible top if leaving the vehicle outdoors.

Notice: Lowering the convertible top when there are objects in the storage area could damage it or break the glass rear window. Always verify that no objects are in the storage area before lowering the convertible top.

Notice: Lowering the convertible top if it is damp, wet, or dirty can cause stains, mildew, and damage to the inside of the vehicle. Dry off the convertible top before lowering it.

Notice: If you lower the convertible top on the vehicle in cold weather (0°C (32°F) or lower), you may damage convertible top components. Do not lower the top in cold weather.

Notice: If you raise or lower the convertible top while the vehicle is in motion, you could damage the top or the top mechanism. The repairs would not be covered by the warranty. Always put an automatic transmission in P (Park) or a manual transmission in Neutral before raising or lowering the convertible top.

Lowering the Convertible Top

1. Park on a level surface. Place the vehicle in P (Park) with an automatic transmission and Neutral with a manual transmission. Set the parking brake.
2. Remove the tonneau cover from the trunk.
3. The rear trunk partition must be in the fastened position. See Rear Storage on page 4-1.
4. Remove all objects on or above the rear trunk partition.

5. Close the trunk.

6. Start the engine.

7. Release the convertible top front latch, located above the inside rearview mirror, by pulling down and turning it clockwise.

8. Return the convertible top front latch to the closed position.

9. Push and hold the rear of the convertible top button. The windows will automatically lower and the convertible top will lower into the rear of the vehicle. A chime will sound when the convertible top has lowered completely. If the radio is on the sound may be muted for a brief time so the chime can be heard.

10. Install the tonneau cover. See Tonneau Cover on page 4-3.

If the convertible top is operated multiple times, the engine should be running to prevent drain on the vehicle’s battery. Under certain conditions, the Driver Information Center (DIC) may display a message regarding the convertible top. See Convertible Top Messages on page 5-36.

Raising the Convertible Top

Notice: If you raise or lower the convertible top while the vehicle is in motion, you could damage the top or the top mechanism. The repairs would not be covered by the warranty. Always put an automatic transmission in P (Park) or a manual transmission in Neutral before raising or lowering the convertible top.
Notice: If you raise the top without removing the tonneau cover you may damage the top components and the tonneau cover. Remove the tonneau cover before operating the convertible top.

1. Park on a level surface. Place the vehicle in P (Park) with an automatic transmission and Neutral with a manual transmission. Set the parking brake.

2. Remove the tonneau cover if installed. See Tonneau Cover on page 4-3.

3. Move any objects that have fallen against the convertible top inside the trunk.

4. Close the trunk.

5. Start the engine.

6. Push and hold the front of the convertible top button. The top will raise and the windows will lower.

7. After the convertible top is completely raised, release the convertible top button.

8. Release the convertible top front latch from the lock position by pulling down and turning it clockwise.

9. Lock the convertible top front latch by pulling down and turning it counterclockwise, then push it up.

WARNING

Placing hands on the top of the windshield frame when closing the convertible soft top could cause fingers to be pinched and may cause injury. Keep hands below the windshield frame when closing the convertible top.
2-22 Keys, Doors, and Windows

If the convertible top has been opened repeatedly within a short time and is not working, wait five minutes before pressing the convertible top button again.

Operation of the convertible top cannot be attempted for five minutes after the last time the convertible top switch was pressed if the convertible top was opened repeatedly within a short time and the top has stopped functioning.

If the vehicle has lost power, the convertible top can still be raised by releasing pressure on the hydraulic pump.

Never attempt to open or close the convertible top manually without first releasing pressure.

Raising the Convertible Top Manually

Notice: If you raise the top without removing the tonneau cover you may damage the top components and the tonneau cover. Remove the tonneau cover before operating the convertible top.

1. Park on a level surface. Place the vehicle in P (Park) with an automatic transmission and Neutral with a manual transmission. Set the parking brake.

2. Remove the tonneau cover if installed. See Tonneau Cover on page 4-3.

3. Move any objects that have fallen against the convertible top inside the trunk.

4. Remove the trim cover to access the hydraulic pressure release bolt.
5. Locate the pressure release bolt (A) on the top of the hydraulic pump.

6. Using the provided wrench, turn the pressure release bolt counterclockwise one to one and a half turns.

7. Reinstall the trim cover.

8. Pull the front of the convertible top up and forward.

9. After the convertible top is completely raised, release the convertible top front latch from the lock position by pulling down and turning it clockwise.

10. Lock the convertible top front latch by pulling down and turning it counterclockwise, then push it up.

When power is restored to the vehicle, the pressure release bolt must be tightened using the provided wrench, by turning it clockwise. The convertible top button can then be used to lower or raise the convertible top.

If the convertible top is operated multiple times, the engine should be running to prevent drain on the vehicle’s battery. Under certain conditions, the Driver Information Center (DIC) may display a message regarding the convertible top. See Convertible Top Messages on page 5-36.

If the battery has been disconnected, the power windows must be initialized for the convertible top to operate. See Power Windows on page 2-15 for more information.
2-24 Keys, Doors, and Windows

Cleaning the Convertible Top

The convertible top should be cleaned often. High pressure car washes may cause water to enter the vehicle.

Hand wash the convertible top in the shade. Use a mild soap, lukewarm water, and a soft sponge. A chamois or cloth may leave lint on the top, and a brush can chafe the threads in the top fabric. Do not use detergents, harsh cleaners, solvents, or bleaching agents.

Wet the entire vehicle and wash the top evenly to avoid spots or rings. Let the soap remain on the fabric for a few minutes. When the top is very dirty, use a mild foam-type cleaner. Thoroughly rinse, then let the top dry in direct sunlight.

To protect the convertible top:

- After washing, the top must be completely dry before lowering.
- Do not get any cleaner on the painted finish; it could leave streaks.
- Before going through an automatic car wash, find out if the equipment could damage the convertible top.

Head Restraints
The vehicle's front seats have adjustable head restraints in the outboard seating positions.

⚠️ WARNING
With head restraints that are not installed and adjusted properly, there is a greater chance that occupants will suffer a neck/spinal injury in a crash. Do not drive until the head restraints for all occupants are installed and adjusted properly.

Adjust the head restraint so that the top of the restraint is at the same height as the top of the occupant's head. This position reduces the chance of a neck injury in a crash.

The height of the head restraint can be adjusted. Pull the head restraint up to raise it. Try to move the head restraint to make sure that it is locked in place.

To lower the head restraint, press the button, located on the top of the seatback, and push the restraint down. Try to move the head restraint after the button is released to make sure that it is locked in place.

The front seat outboard head restraints are not designed to be removed.

Seat Adjustment

![Seat Adjustment Diagram]

**WARNING**

You can lose control of the vehicle if you try to adjust a driver seat while the vehicle is moving. The sudden movement could startle and confuse you, or make you push a pedal when you do not want to. Adjust the driver seat only when the vehicle is not moving.

**Seat Position**

To adjust a manual seat, if equipped:

1. Lift the handle under the seat to unlock it.
2. Slide the seat and release the handle.
3. Try to move the seat back and forth to be sure it is locked in place.

**Height Adjustment**

If equipped, move the lever up or down repeatedly to manually raise or lower the seat.
### 3-4 Seats and Restraints

#### Power Seat Adjustment

To adjust a power seat, if equipped:
- Move the seat forward or rearward by sliding the horizontal control forward or rearward.
- Raise or lower the front part of the seat cushion by moving the front of the horizontal control up or down.
- Raise or lower the entire seat by moving the entire horizontal control up or down.

#### Power Reclining Seatbacks

To adjust the seatback:
- Tilt the top of the control rearward to recline.
- Tilt the top of the control forward to raise.

---

#### Reclining Seatbacks

#### Power Reclining Seatbacks

To adjust the seatback:
- Tilt the top of the control rearward to recline.
- Tilt the top of the control forward to raise.

---

#### WARNING

Sitting in a reclined position when the vehicle is in motion can be dangerous. Even when buckled up, the safety belts cannot do their job.

The shoulder belt will not be against your body. Instead, it will be in front of you. In a crash, you could go into it, receiving neck or other injuries.

The lap belt could go up over your abdomen. The belt forces would be there, not at your pelvic bones. This could cause serious internal injuries.

For proper protection when the vehicle is in motion, have the seatback upright. Then sit well back in the seat and wear the safety belt properly.
Do not have a seatback reclined if the vehicle is moving.

Seatback Latches

To access the rear seats, pull up on the latch on the rear of the driver or front passenger seatback. Fold the seatback forward.

**WARNING**

If either seatback is not locked, it could move forward in a sudden stop or crash. That could cause injury to the person sitting there. Always push and pull on the seatbacks to be sure they are locked.

To return the seatback to the upright position, lift the seatback and manually push it rearward until it locks in place. Push and pull on the seatback to make sure it is locked.

The power recline control is deactivated when the seatback is folded forward and will not function until the seatback has been manually returned to the upright, locked position. This is normal. Do not use the power recline control on the outboard side of the seat to raise the seatback. See Reclining Seatbacks on page 3-4.
### Seats and Restraints

#### Heated Front Seats

**WARNING**

If you cannot feel temperature change or pain to the skin, the seat heater may cause burns even at low temperatures. To reduce the risk of burns, people with such a condition should use care when using the seat heater, especially for long periods of time. Do not place anything on the seat that insulates against heat, such as a blanket, cushion, cover, or similar item. This may cause the seat heater to overheat. An overheated seat heater may cause a burn or may damage the seat.

To operate, the engine must be running.

Press the button once for the highest setting. With each press of the button, the heated seat will change to the next lower setting, and then the off setting. Two lights indicate the highest setting, and one light indicates the lowest.

If available, press 🔄 or 🔄 to turn on the heated seat. A light indicates this feature is on.
Rear Seats

Notice: On convertible models, there is a speaker between the two rear seating positions on the seatback. If someone leans on the speaker, if cargo is loaded on it, or if liquid is spilled on it, damage could occur. Do not lean against the speaker, place cargo on the speaker, or spill liquids on the speaker.

On coupe models, the rear seat has two designated seating positions and can be folded for more cargo space. Fold the seat only when the vehicle is parked.

To fold the seatback down:

1. Pull on the strap located on the top of the rear seatback.
2. Fold the seatback down.

\[\text{\textbf{WARNING}}\]

A safety belt that is improperly routed, not properly attached, or twisted will not provide the protection needed in a crash. The person wearing the belt could be seriously injured. After raising the rear seatback, always check to be sure that the safety belts are properly routed and attached, and are not twisted.

Lift the seatback up to raise it, and push it back to lock it into place. Make sure the safety belt is not twisted or caught in the seatback.
3-8 Seats and Restraints

Safety Belts
This section of the manual describes how to use safety belts properly. It also describes some things not to do with safety belts.

⚠️ WARNING

Do not let anyone ride where a safety belt cannot be worn properly. In a crash, if you or your passenger(s) are not wearing safety belts, injuries can be much worse than if you are wearing safety belts. You can be seriously injured or killed by hitting things inside the vehicle harder or by being ejected from the vehicle. In addition, anyone who is not buckled up can strike other passengers in the vehicle.

(Continued)

⚠️ WARNING (Continued)

It is extremely dangerous to ride in a cargo area, inside or outside of a vehicle. In a collision, passengers riding in these areas are more likely to be seriously injured or killed. Do not allow passengers to ride in any area of the vehicle that is not equipped with seats and safety belts.

Always wear a safety belt, and check that all passenger(s) are restrained properly too.

Why Safety Belts Work

This vehicle has indicators as a reminder to buckle the safety belts. See Safety Belt Reminders on page 5-15.

When riding in a vehicle, you travel as fast as the vehicle does. If the vehicle stops suddenly, you keep going until something stops you. It could be the windshield, the instrument panel, or the safety belts!
When you wear a safety belt, you and the vehicle slow down together. There is more time to stop because you stop over a longer distance and, when worn properly, your strongest bones take the forces from the safety belts. That is why wearing safety belts makes such good sense.

Questions and Answers About Safety Belts

Q: Will I be trapped in the vehicle after a crash if I am wearing a safety belt?
A: You could be — whether you are wearing a safety belt or not. Your chance of being conscious during and after a crash, so you can unbuckle and get out, is much greater if you are belted.

Q: If my vehicle has airbags, why should I have to wear safety belts?
A: Airbags are supplemental systems only; so they work with safety belts — not instead of them. Whether or not an airbag is provided, all occupants still have to buckle up to get the most protection.

Also, in nearly all states and in all Canadian provinces, the law requires wearing safety belts.

How to Wear Safety Belts Properly

This section is only for people of adult size.

There are special things to know about safety belts and children. And there are different rules for smaller children and infants. If a child will be riding in the vehicle, see Older Children on page 3-33 or Infants and Young Children on page 3-35. Follow those rules for everyone’s protection.

It is very important for all occupants to buckle up. Statistics show that unbelted people are hurt more often in crashes than those who are wearing safety belts.
There are important things to know about wearing a safety belt properly.

- Sit up straight and always keep your feet on the floor in front of you.
- Always use the correct buckle for your seating position.
- Wear the lap part of the belt low and snug on the hips, just touching the thighs. In a crash, this applies force to the strong pelvic bones and you would be less likely to slide under the lap belt. If you slid under it, the belt would apply force on your abdomen. This could cause serious or even fatal injuries.
- Wear the shoulder belt over the shoulder and across the chest. These parts of the body are best able to take belt restraining forces. The shoulder belt locks if there is a sudden stop or crash.

**WARNING**
You can be seriously injured, or even killed, by not wearing your safety belt properly.
- Never allow the lap or shoulder belt to become loose or twisted.
- Never wear the shoulder belt under both arms or behind your back.
- Never route the lap or shoulder belt over an armrest.
Lap-Shoulder Belt

All seating positions in the vehicle have a lap-shoulder belt.

The following instructions explain how to wear a lap-shoulder belt properly.

1. If the seat has a safety belt guide, and the safety belt is not routed through the guide, snap the guide around the belt webbing. Be sure the belt is not twisted.

2. Adjust the seat, if the seat is adjustable, so you can sit up straight. To see how, see “Seats” in the Index.

3. Pick up the latch plate and pull the belt across you. Do not let it get twisted. The lap-shoulder belt may lock if you pull the belt across you very quickly. If this happens, let the belt go back slightly to unlock it. Then pull the belt across you more slowly.

4. Push the latch plate into the buckle until it clicks. Pull up on the latch plate to make sure it is secure. If the belt is not long enough, see Safety Belt Extender on page 3-15.

If the shoulder portion of a passenger belt is pulled out all the way, the child restraint locking feature may be engaged. If this happens, let the belt go back all the way and start again.
3-12 Seats and Restraints

Position the release button on the buckle so that the safety belt could be quickly unbuckled if necessary.

5. To make the lap part tight, pull up on the shoulder belt.

It may be necessary to pull stitching on the safety belt through the latch plate to fully tighten the lap belt on smaller occupants.

Safety Belt Pretensioners

This vehicle has safety belt pretensioners for the front outboard occupants. Although the safety belt pretensioners cannot be seen, they are part of the safety belt assembly. They can help tighten the safety belts during the early stages of a moderate to severe frontal or near frontal crash if the threshold conditions for pretensioner activation are met. And, if the vehicle has side impact airbags, safety belt pretensioners can help tighten the safety belts in a side crash.

Pretensioners work only once. If the pretensioners activate in a crash, the pretensioners and probably other parts of the vehicle’s safety belt system will need to be replaced. See Replacing Safety Belt System Parts after a Crash on page 3-16.

To unlatch the belt, push the button on the buckle. The belt should return to its stowed position.

Before a door is closed, be sure the safety belt is out of the way. If a door is slammed against a safety belt, damage can occur to both the safety belt and the vehicle.
Rear Safety Belt Comfort Guides

Rear shoulder belt comfort guides may provide added safety belt comfort for older children who have outgrown booster seats and for some adults. When installed on a shoulder belt, the comfort guide positions the shoulder belt away from the neck and head.

There is one guide for each outboard passenger position in the rear seat. Here is how to install a comfort guide to the safety belt:

1. Pull the elastic cord out from between the edge of the seatback and the interior body to remove the guide from its storage clip.

2. Place the guide over the belt and insert the two edges of the belt into the slots of the guide.
3-14 Seats and Restraints

3. Be sure that the belt is not twisted and it lies flat. The elastic cord must be under the belt and the guide on top.

4. Buckle, position, and release the safety belt as described previously in this section. Make sure the shoulder portion of the belt is on the shoulder and not falling off of it. The belt should be close to, but not contacting, the neck.

⚠️ WARNING

A safety belt that is not properly worn may not provide the protection needed in a crash. The person wearing the belt could be seriously injured. The shoulder belt should go over the shoulder and across the chest. These parts of the body are best able to take belt restraining forces.
To remove and store the comfort guide, squeeze the belt edges together so that the safety belt can be removed from the guide. Slide the guide onto the clip, leaving only the loop of the elastic cord exposed. Properly secure the guide before folding the seatback.

**Safety Belt Use During Pregnancy**

Safety belts work for everyone, including pregnant women. Like all occupants, they are more likely to be seriously injured if they do not wear safety belts.

A pregnant woman should wear a lap-shoulder belt, and the lap portion should be worn as low as possible, below the rounding, throughout the pregnancy.

The best way to protect the fetus is to protect the mother. When a safety belt is worn properly, it is more likely that the fetus will not be hurt in a crash. For pregnant women, as for anyone, the key to making safety belts effective is wearing them properly.

**Safety Belt Extender**

If the vehicle's safety belt will fasten around you, you should use it. But if a safety belt is not long enough, your dealer will order you an extender. When you go in to order it, take the heaviest coat you will wear, so the extender will be long enough for you. To help avoid personal injury, do not let someone else use it, and use it only for the seat it is made to fit. The extender has been designed for adults. Never use it for securing child seats. To wear it, attach it to the regular safety belt. See the instruction sheet that comes with the extender.
3-16 Seats and Restraints

Safety System Check

Now and then, check that the safety belt reminder light, safety belts, buckles, latch plates, retractors, and anchorages are all working properly. Look for any other loose or damaged safety belt system parts that might keep a safety belt system from doing its job. See your dealer to have it repaired. Torn or frayed safety belts may not protect you in a crash. They can rip apart under impact forces. If a belt is torn or frayed, get a new one right away.

Make sure the safety belt reminder light is working. See Safety Belt Reminders on page 5-15.

Keep safety belts clean and dry. See Safety Belt Care on page 3-16.

Safety Belt Care

Keep belts clean and dry.

⚠️ WARNING

Do not bleach or dye safety belts. It may severely weaken them. In a crash, they might not be able to provide adequate protection. Clean safety belts only with mild soap and lukewarm water.

Replacing Safety Belt System Parts after a Crash

⚠️ WARNING

A crash can damage the safety belt system in the vehicle. A damaged safety belt system may not properly protect the person using it, resulting in serious injury or even death in a crash. To help make sure the safety belt systems are working properly after a crash, have them inspected and any necessary replacements made as soon as possible.

After a minor crash, replacement of safety belts may not be necessary. But the safety belt assemblies that were used during any crash may have been stressed or damaged.
See your dealer to have the safety belt assemblies inspected or replaced.

New parts and repairs may be necessary even if the safety belt system was not being used at the time of the crash.

Have the safety belt pretensioners checked if the vehicle has been in a crash, or if the airbag readiness light stays on after you start the vehicle or while you are driving. See Airbag Readiness Light on page 5-16.

Airbag System

The vehicle has the following airbags:
- A frontal airbag for the driver.
- A frontal airbag for the right front passenger.
- A seat-mounted side impact airbag for the driver.
- A seat-mounted side impact airbag for the right front passenger.

The vehicle may also have the following airbags:
- A roof-rail airbag for the driver and the passenger seated directly behind the driver.
- A roof-rail airbag for the right front passenger and the passenger seated directly behind the right front passenger.

All of the airbags in your vehicle will have the word AIRBAG embossed in the trim or on an attached label near the deployment opening.

For frontal airbags, the word AIRBAG will appear on the middle part of the steering wheel for the driver and on the instrument panel for the right front passenger.

With seat-mounted side impact airbags, the word AIRBAG will appear on the side of the seatback closest to the door.

With roof-rail airbags, the word AIRBAG will appear along the headliner or trim.

Airbags are designed to supplement the protection provided by safety belts. Even though today’s airbags are also designed to help reduce the risk of injury from the force of an inflating bag, all airbags must inflate very quickly to do their job.
3-18 Seats and Restraints

Here are the most important things to know about the airbag system:

⚠️ WARNING

You can be severely injured or killed in a crash if you are not wearing your safety belt, even with airbags. Airbags are designed to work with safety belts, not replace them. Also, airbags are not designed to inflate in every crash. In some crashes safety belts are the only restraint. See When Should an Airbag Inflate? on page 3-21.

Wearing your safety belt during a crash helps reduce the chance of hitting things inside the vehicle or being ejected from it. Airbags are “supplemental restraints” to the safety belts. Everyone in the vehicle should wear a safety belt properly, whether or not there is an airbag for that person.

⚠️ WARNING

Because airbags inflate with great force and faster than the blink of an eye, anyone who is up against, or very close to any airbag when it inflates can be seriously injured or killed. Do not sit unnecessarily close to any airbag, as you would be if sitting on the edge of the seat or leaning forward. Safety belts help keep you in position before and during a crash. Always wear a safety belt, even with airbags. The driver should sit as far back as possible while still maintaining control of the vehicle.

Occupants should not lean on or sleep against the door or side windows in seating positions with seat-mounted side impact airbags and/or roof-rail airbags.

⚠️ WARNING

Children who are up against, or very close to, any airbag when it inflates can be seriously injured or killed. Airbags plus lap-shoulder belts offer protection for adults and older children, but not for young children and infants. Neither the vehicle’s safety belt system nor its airbag system is designed for them. Young children and infants need the protection that a child restraint system can provide. Always secure children properly in the vehicle. To read how, see Older Children on page 3-33 or Infants and Young Children on page 3-35.
There is an airbag readiness light on the instrument panel, which shows the airbag symbol.

The system checks the airbag electrical system for malfunctions. The light tells you if there is an electrical problem. See Airbag Readiness Light on page 5-16 for more information.

**Where Are the Airbags?**

The driver frontal airbag is in the middle of the steering wheel.

The right front passenger frontal airbag is in the instrument panel on the passenger side.

**Warnings**

If something is between an occupant and an airbag, the airbag might not inflate properly or it might force the object into that person causing severe injury or even death. The path of an inflating airbag must be kept clear. Do not put anything between an occupant and an airbag, and do not attach or put anything on the steering wheel hub or on or near any other airbag covering.

Do not use seat accessories that block the inflation path of a seat-mounted side impact airbag.

Never secure anything to the roof of a vehicle with roof-rail airbags by routing a rope or tie-down through any door or window opening. If you do, the path of an inflating roof-rail airbag will be blocked.

---

**When Should an Airbag Inflate?**

Frontal airbags are designed to inflate in moderate to severe frontal or near frontal crashes to help reduce the potential for severe injuries mainly to the driver's or right front passenger's head and chest. However, they are only designed to inflate if the impact exceeds a predetermined deployment threshold. Deployment thresholds are used to predict how severe a crash is likely to be in time for the airbags to inflate and help restrain the occupants.

Whether the frontal airbags will or should deploy is not based on how fast your vehicle is traveling. It depends largely on what you hit, the direction of the impact, and how quickly your vehicle slows down.

---

Frontal airbags may inflate at different crash speeds. For example:

- If the vehicle hits a stationary object, the airbags could inflate at a different crash speed than if the vehicle hits a moving object.
- If the vehicle hits an object that deforms, the airbags could inflate at a different crash speed than if the vehicle hits an object that does not deform.
- If the vehicle hits a narrow object (like a pole), the airbags could inflate at a different crash speed than if the vehicle hits a wide object (like a wall).
- If the vehicle goes into an object at an angle, the airbags could inflate at a different crash speed than if the vehicle goes straight into the object.

Thresholds can also vary with specific vehicle design.
3-22 Seats and Restraints

Frontal airbags are not intended to inflate during vehicle rollovers, rear impacts, or many side impacts.

In addition, the vehicle has dual-stage frontal airbags. Dual-stage airbags adjust the restraint according to crash severity. The vehicle has electronic frontal sensors, which help the sensing system distinguish between a moderate frontal impact and a more severe frontal impact. For moderate frontal impacts, dual-stage airbags inflate at a level less than full deployment. For more severe frontal impacts, full deployment occurs.

The vehicle has seat-mounted side impact airbags. The vehicle may or may not have roof-rail airbags. See Airbag System on page 3-17.

Seat-mounted side impact and roof-rail airbags are intended to inflate in moderate to severe side crashes. In addition, these roof-rail airbags are intended to inflate during a rollover or in a severe frontal impact. Seat-mounted side impact and roof-rail airbags will inflate if the crash severity is above the system’s designed threshold level. The threshold level can vary with specific vehicle design.

A seat-mounted side impact airbag is intended to deploy on the side of the vehicle that is struck. Both roof-rail airbags will deploy when either side of the vehicle is struck, or if the sensing system predicts that the vehicle is about to roll over, or in a severe frontal impact.

In any particular crash, no one can say whether an airbag should have inflated simply because of the damage to a vehicle or because of what the repair costs were. For frontal airbags, inflation is determined by what the vehicle hits, the angle of the impact, and how quickly the vehicle slows down. For seat-mounted side impact and roof-rail airbags, deployment is determined by the location and severity of the side impact.

In a rollover event, roof-rail airbag deployment is determined by the direction of the roll. In a rollover event, both roof-rail airbags will deploy.
What Makes an Airbag Inflate?

In a deployment event, the sensing system sends an electrical signal triggering a release of gas from the inflator. Gas from the inflator fills the airbag causing the bag to break out of the cover and deploy. The inflator, the airbag, and related hardware are all part of the airbag module.

Frontal airbag modules are located inside the steering wheel and instrument panel. For vehicles with seat-mounted side impact airbags, there are airbag modules in the side of the front seatbacks closest to the door. For vehicles with roof-rail airbags, there are airbag modules in the ceiling of the vehicle, near the side windows that have occupant seating positions.

How Does an Airbag Restrain?

In moderate to severe frontal or near frontal collisions, even belted occupants can contact the steering wheel or the instrument panel. In moderate to severe side collisions, even belted occupants can contact the inside of the vehicle.

Airbags supplement the protection provided by safety belts. Frontal airbags distribute the force of the impact more evenly over the occupant's upper body, stopping the occupant more gradually. Seat-mounted side impact and roof-rail airbags distribute the force of the impact more evenly over the occupant's upper body.

Rollover-capable roof-rail airbags are designed to help contain the head and chest of occupants in the outboard seating positions in the first and second rows. The rollover-capable roof-rail airbags are designed to help reduce the risk of full or partial ejection in rollover events, although no system can prevent all such ejections. But airbags would not help in many types of collisions, primarily because the occupant's motion is not toward those airbags. See When Should an Airbag Inflate? on page 3-21 for more information.

Airbags should never be regarded as anything more than a supplement to safety belts.
3-24 Seats and Restraints

What Will You See after an Airbag Inflates?

After the frontal airbags and seat-mounted side impact airbags inflate, they quickly deflate, so quickly that some people may not even realize an airbag inflated. Roof-rail airbags may still be at least partially inflated for some time after they inflate. Some components of the airbag module may be hot for several minutes. For location of the airbags, see Where Are the Airbags? on page 3-19.

The parts of the airbag that come into contact with you may be warm, but not too hot to touch. There may be some smoke and dust coming from the vents in the deflated airbags. Airbag inflation does not prevent the driver from seeing out of the windshield or being able to steer the vehicle, nor does it prevent people from leaving the vehicle.

⚠️ WARNING
When an airbag inflates, there may be dust in the air. This dust could cause breathing problems for people with a history of asthma or other breathing trouble. To avoid this, everyone in the vehicle should get out as soon as it is safe to do so. If you have breathing problems but cannot get out of the vehicle after an airbag inflates, then get fresh air by opening a window or a door. If you experience breathing problems following an airbag deployment, you should seek medical attention.

The vehicle has a feature that may automatically unlock the doors, turn the interior lamps on, turn the hazard warning flashers on, and shut off the fuel system after the airbags inflate. You can lock the doors, turn the interior lamps off, and turn the hazard warning flashers off by using the controls for those features.

⚠️ WARNING
A crash severe enough to inflate the airbags may have also damaged important functions in the vehicle, such as the fuel system, brake and steering systems, etc. Even if the vehicle appears to be drivable after a moderate crash, there may be concealed damage that could make it difficult to safely operate the vehicle.

Use caution if you should attempt to restart the engine after a crash has occurred.
In many crashes severe enough to inflate the airbag, windshields are broken by vehicle deformation. Additional windshield breakage may also occur from the front outboard passenger airbag.

- Airbags are designed to inflate only once. After an airbag inflates, you will need some new parts for the airbag system. If you do not get them, the airbag system will not be there to help protect you in another crash. A new system will include airbag modules and possibly other parts. The service manual for the vehicle covers the need to replace other parts.

- The vehicle has a crash sensing and diagnostic module which records information after a crash. See Vehicle Data Recording and Privacy on page 13-20 and Event Data Recorders on page 13-20.

- Let only qualified technicians work on the airbag systems. Improper service can mean that an airbag system will not work properly. See your dealer for service.

## Passenger Sensing System

The vehicle has a passenger sensing system for the right front passenger position. The passenger airbag status indicator will be visible on the overhead console when the vehicle is started.
3-26 Seats and Restraints

The passenger sensing system will turn off the right front passenger frontal airbag under certain conditions. The driver airbags and roof-rail airbags (if equipped) are not affected by the passenger sensing system.

The passenger sensing system works with sensors that are part of the right front passenger seat. The sensors are designed to detect the presence of a properly seated occupant and determine if the right front passenger frontal airbag should be enabled (may inflate) or not.

According to accident statistics, children are safer when properly secured in a rear seat in the correct child restraint for their weight and size.

We recommend that children be secured in a rear seat, including: an infant or a child riding in a rear-facing child restraint; a child riding in a forward-facing child seat; an older child riding in a booster seat; and children, who are large enough, using safety belts.

A label on the sun visor says, "Never put a rear-facing child seat in the front." This is because the risk to the rear-facing child is so great if the airbag deploys.

A child in a rear-facing child restraint can be seriously injured or killed if the right front passenger airbag inflates. This is because the back of the rear-facing child restraint would be very close to the inflating airbag. A child in a forward-facing child restraint can be seriously injured or killed if the right front passenger airbag inflates and the passenger seat is in a forward position.

(WARNING)

Even if the passenger sensing system has turned off the right front passenger frontal airbag, no system is fail-safe. No one can guarantee that an airbag will not deploy under some unusual circumstance, even though the airbag is turned off.

Secure rear-facing child restraints in a rear seat, even if the airbag is off. If you secure a forward-facing child restraint in the right front seat, always move the front passenger seat as far back as it will go. It is better to secure the child restraint in a rear seat.
The passenger sensing system is designed to turn off the right front passenger frontal airbag if:

- The right front passenger seat is unoccupied.
- The system determines that an infant is present in a rear-facing infant seat.
- The system determines that a small child is present in a child restraint.
- The system determines that a small child is present in a booster seat.
- A right front passenger takes his/her weight off of the seat for a period of time.
- The right front passenger seat is occupied by a smaller person, such as a child who has outgrown child restraints.
- Or, if there is a critical problem with the airbag system or the passenger sensing system.

When the passenger sensing system has turned off the right front passenger frontal airbag, the off indicator will light and stay lit to remind you that the airbag is off. See Passenger Airbag Status Indicator on page 5-17.

The passenger sensing system is designed to turn on (may inflate) the right front passenger frontal airbag any time the system senses that a person of adult size is sitting properly in the right front passenger seat. When the passenger sensing system has allowed the airbag to be enabled, the on indicator will light and stay lit to remind you that the airbag is active.

For some children who have outgrown child restraints and for very small adults, the passenger sensing system may or may not turn off the right front passenger frontal airbag, depending upon the person’s seating posture and body build. Everyone in the vehicle who has outgrown child restraints should wear a safety belt properly — whether or not there is an airbag for that person.

**WARNING**

If the airbag readiness light ever comes on and stays on, it means that something may be wrong with the airbag system. To help avoid injury to yourself or others, have the vehicle serviced right away. See Airbag Readiness Light on page 5-16 for more information, including important safety information.

**If the On Indicator is Lit for a Child Restraint**

If a child restraint has been installed and the on indicator is lit:
1. Turn the vehicle off.
2. Remove the child restraint from the vehicle.
3-28 Seats and Restraints

3. Remove any additional items from the seat such as blankets, cushions, seat covers, seat heaters, or seat massagers.

4. Reinstall the child restraint following the directions provided by the child restraint manufacturer and refer to Securing Child Restraints (Right Front Passenger Seat) on page 3-49 or Securing Child Restraints (Rear Seat) on page 3-47.

5. If, after reinstalling the child restraint and restarting the vehicle, the on indicator is still lit, turn the vehicle off. Then slightly recline the vehicle seatback and adjust the seat cushion, if adjustable, to make sure that the vehicle seatback is not pushing the child restraint into the seat cushion.

6. Restart the vehicle.

If the on indicator is still lit, secure the child in the child restraint in a rear seat position in the vehicle, and check with your dealer.

If the Off Indicator is Lit for an Adult-Size Occupant

If a person of adult-size is sitting in the right front passenger seat, but the off indicator is lit, it could be because that person is not sitting properly in the seat. If this happens, use the following steps to allow the system to detect that person and enable the right front passenger frontal airbag:

1. Turn the vehicle off.
2. Remove any additional material from the seat, such as blankets, cushions, seat covers, seat heaters, or seat massagers.
3. Place the seatback in the fully upright position.
4. Have the person sit upright in the seat, centered on the seat cushion, with legs comfortably extended.
5. Restart the vehicle and have the person remain in this position for one minute after the on indicator is lit.
Additional Factors Affecting System Operation

Safety belts help keep the passenger in position on the seat during vehicle maneuvers and braking, which helps the passenger sensing system maintain the passenger airbag status. See "Safety Belts" and "Child Restraints" in the Index for additional information about the importance of proper restraint use.

A thick layer of additional material, such as a blanket or cushion, or aftermarket equipment such as seat covers, seat heaters, and seat massagers can affect how well the passenger sensing system operates. We recommend that you not use seat covers or other aftermarket equipment except when approved by GM for your specific vehicle. See Adding Equipment to the Airbag-Equipped Vehicle on page 3-30 for more information about modifications that can affect how the system operates.

The passenger sensing system may turn on the passenger airbag when liquid soaks into the seat. If this happens, the on indicator will be lit. If the passenger seat gets wet, dry the seat immediately. If the airbag readiness light is lit, do not install a child restraint or allow anyone to occupy the seat. See Airbag Readiness Light on page 5-16 for important safety information.

⚠️ WARNING

Stowing of articles under the passenger seat or between the passenger seat cushion and seatback may interfere with the proper operation of the passenger sensing system.
3-30 Seats and Restraints

Servicing the Airbag-Equipped Vehicle

Airbags affect how the vehicle should be serviced. There are parts of the airbag system in several places around the vehicle. Your dealer and the service manual have information about servicing the vehicle and the airbag system. To purchase a service manual, see Service Publications Ordering Information on page 13-18.

⚠️ WARNING

For up to 10 seconds after the vehicle is turned off and the battery is disconnected, an airbag can still inflate during improper service. You can be injured if you are close to an airbag when it inflates. Avoid yellow connectors. They are probably part of the airbag system. Be sure to follow proper service procedures, and make sure the person performing work for you is qualified to do so.

Adding Equipment to the Airbag-Equipped Vehicle

Q: Is there anything I might add to or change about the vehicle that could keep the airbags from working properly?

A: Yes. If you add things that change the vehicle’s frame, bumper system, height, front end or side sheet metal, they may keep the airbag system from working properly. Changing or moving any parts of the front seat, safety belts, the airbag sensing and diagnostic module, steering wheel, instrument panel, roof-rail airbag modules, ceiling headliner or pillar garnish trim, front sensors, side impact sensors, or airbag wiring can affect the operation of the airbag system.
In addition, the vehicle has a passenger sensing system for the right front passenger position, which includes sensors that are part of the passenger seat. The passenger sensing system may not operate properly if the original seat trim is replaced with non-GM covers, upholstery or trim, or with GM covers, upholstery or trim designed for a different vehicle. Any object, such as an aftermarket seat heater or a comfort enhancing pad or device, installed under or on top of the seat fabric, could also interfere with the operation of the passenger sensing system.

This could either prevent proper deployment of the passenger airbag(s) or prevent the passenger sensing system from properly turning off the passenger airbag(s). See Passenger Sensing System on page 3-25.

If you have questions, call Customer Assistance. The phone numbers and addresses for Customer Assistance are in Step Two of the Customer Satisfaction Procedure in this manual. See Customer Satisfaction Procedure (U.S. and Canada) on page 13-1 or Customer Satisfaction Procedure (Mexico) on page 13-3.

Q: Because I have a disability, I have to get my vehicle modified. How can I find out whether this will affect my airbag system?

In addition, your dealer and the service manual have information about the location of the airbag sensors, sensing and diagnostic module and airbag wiring.
3-32 Seats and Restraints

Airbag System Check

The airbag system does not need regularly scheduled maintenance or replacement. Make sure the airbag readiness light is working. See Airbag Readiness Light on page 5-16.

Notice: If an airbag covering is damaged, opened, or broken, the airbag may not work properly. Do not open or break the airbag coverings. If there are any opened or broken airbag covers, have the airbag covering and/or airbag module replaced. For the location of the airbags, see Where Are the Airbags? on page 3-19. See your dealer for service.

Replacing Airbag System Parts after a Crash

⚠️ WARNING

A crash can damage the airbag systems in the vehicle. A damaged airbag system may not work properly and may not protect you and your passenger(s) in a crash, resulting in serious injury or even death. To help make sure the airbag systems are working properly after a crash, have them inspected and any necessary replacements made as soon as possible.

If an airbag inflates, you will need to replace airbag system parts. See your dealer for service.

If the airbag readiness light stays on after the vehicle is started or comes on when you are driving, the airbag system may not work properly. Have the vehicle serviced right away. See Airbag Readiness Light on page 5-16.
Child Restraints

Older Children

Older children who have outgrown booster seats should wear the vehicle safety belts.

The manufacturer's instructions that come with the booster seat state the weight and height limitations for that booster. Use a booster seat with a lap-shoulder belt until the child passes the fit test below:

- Sit all the way back on the seat. Do the knees bend at the seat edge? If yes, continue. If no, return to the booster seat.
- Buckle the lap-shoulder belt. Does the shoulder belt rest on the shoulder? If yes, continue. If no, try using the rear safety belt comfort guide. See “Rear Safety Belt Comfort Guides” under Lap-Shoulder Belt on page 3-11 for more information. If the shoulder belt still does not rest on the shoulder, then return to the booster seat.
- Does the lap belt fit low and snug on the hips, touching the thighs? If yes, continue. If no, return to the booster seat.

- Can proper safety belt fit be maintained for the length of the trip? If yes, continue. If no, return to the booster seat.

Q: What is the proper way to wear safety belts?

A: An older child should wear a lap-shoulder belt and get the additional restraint a shoulder belt can provide. The shoulder belt should not cross the face or neck. The lap belt should fit snugly below the hips, just touching the top of the thighs. This applies belt force to the child's pelvic bones in a crash. It should never be worn over the abdomen, which could cause severe or even fatal internal injuries in a crash.

Also see “Rear Safety Belt Comfort Guides” under Lap-Shoulder Belt on page 3-11.
3-34 Seats and Restraints

According to accident statistics, children and infants are safer when properly restrained in a child restraint system or infant restraint system secured in a rear seating position.

In a crash, children who are not buckled up can strike other people who are buckled up, or can be thrown out of the vehicle. Older children need to use safety belts properly.

⚠️ WARNING

Never allow more than one child to wear the same safety belt. The safety belt cannot properly spread the impact forces. In a crash, they can be crushed together and seriously injured. A safety belt must be used by only one person at a time.

⚠️ WARNING

Never allow a child to wear the safety belt with the shoulder belt behind their back. A child can be seriously injured by not wearing the lap-shoulder belt properly. In a crash, the child would not be restrained by the shoulder belt. The child could move too far forward increasing the chance of head and neck injury. The child might also slide under the lap belt. The belt force would then be applied right on the abdomen. That could cause serious or fatal injuries. The shoulder belt should go over the shoulder and across the chest.
Infants and Young Children

Everyone in a vehicle needs protection! This includes infants and all other children. Neither the distance traveled nor the age and size of the traveler changes the need, for everyone, to use safety restraints. In fact, the law in every state in the United States and in every Canadian province says children up to some age must be restrained while in a vehicle.

WARNING

Children can be seriously injured or strangled if a shoulder belt is wrapped around their neck and the safety belt continues to tighten. Never leave children unattended in a vehicle and never allow children to play with the safety belts.

Airbags plus lap-shoulder belts offer protection for adults and older children, but not for young children and infants. Neither the vehicle’s safety belt system nor its airbag system is designed for them. Every time infants and young children ride in vehicles, they should have the protection provided by appropriate child restraints.

Children who are not restrained properly can strike other people, or can be thrown out of the vehicle.

Q: What are the different types of add-on child restraints?

A: Add-on child restraints, which are purchased by the vehicle owner, are available in four basic types. Selection of a particular restraint should take into consideration not only the child's weight, height, and age but also whether or not the restraint will be compatible with the motor vehicle in which it will be used. For most basic types of child restraints, there are many different models available. When purchasing a child restraint, be sure it is designed to be used in a motor vehicle. If it is, the restraint will have a label saying that it meets federal motor vehicle safety standards.

The restraint manufacturer's instructions that come with the restraint state the weight and height limitations for a particular child restraint. In addition, there are many kinds of restraints available for children with special needs.

⚠️ WARNING

A young child's hip bones are still so small that the vehicle's regular safety belt may not remain low on the hip bones, as it should. Instead, it may settle up around the child's abdomen. In a crash, the belt would apply force on a body area that is unprotected by any bony structure. This alone could cause serious or fatal injuries. To reduce the risk of serious or fatal injuries during a crash, young children should always be secured in appropriate child restraints.

⚠️ WARNING

To reduce the risk of neck and head injury during a crash, infants need complete support. In a crash, if an infant is in a rear-facing child restraint, the crash forces can be distributed across the strongest part of an infant's body, the back and shoulders. Infants should always be secured in rear-facing child restraints.
3-38 Seats and Restraints

Child Restraint Systems

(A) Rear-Facing Infant Seat
A rear-facing infant seat (A) provides restraint with the seating surface against the back of the infant.

The harness system holds the infant in place and, in a crash, acts to keep the infant positioned in the restraint.

(B) Forward-Facing Child Seat
A forward-facing child seat (B) provides restraint for the child’s body with the harness.

(C) Booster Seats
A booster seat (C) is a child restraint designed to improve the fit of the vehicle’s safety belt system. A booster seat can also help a child to see out the window.
Securing an Add-On Child Restraint in the Vehicle

⚠️ WARNING

A child can be seriously injured or killed in a crash if the child restraint is not properly secured in the vehicle. Secure the child restraint properly in the vehicle using the vehicle safety belt or LATCH system, following the instructions that came with that child restraint and the instructions in this manual.

To help reduce the chance of injury, the child restraint must be secured in the vehicle. Child restraint systems must be secured in vehicle seats by lap belts or the lap belt portion of a lap-shoulder belt, or by the LATCH system. See Lower Anchors and Tethers for Children (LATCH System) on page 3-41.

Children can be endangered in a crash if the child restraint is not properly secured in the vehicle.

When securing an add-on child restraint, refer to the instructions that come with the restraint which may be on the restraint itself or in a booklet, or both, and to this manual. The child restraint instructions are important, so if they are not available, obtain a replacement copy from the manufacturer.

Keep in mind that an unsecured child restraint can move around in a collision or sudden stop and injure people in the vehicle. Be sure to properly secure any child restraint in the vehicle—even when no child is in it.

In some areas of the United States and Canada, Certified Child Passenger Safety Technicians (CPSTs) are available to inspect and demonstrate how to correctly use and install child restraints. In the U.S., refer to the National Highway Traffic Safety Administration (NHTSA) website to locate the nearest child safety seat inspection station. For CPST availability in Canada, check with Transport Canada or the Provincial Ministry of Transportation office.

Securing the Child Within the Child Restraint

⚠️ WARNING

A child can be seriously injured or killed in a crash if the child is not properly secured in the child restraint. Secure the child properly following the instructions that came with that child restraint.
3-40 Seats and Restraints

Where to Put the Restraint

According to accident statistics, children and infants are safer when properly restrained in a child restraint system or infant restraint system secured in a rear seating position.

We recommend that children and child restraints be secured in a rear seat, including: an infant or a child riding in a rear-facing child restraint; a child riding in a forward-facing child seat; an older child riding in a booster seat; and children, who are large enough, using safety belts.

Never put a rear-facing child seat in the front. This is because the risk to the rear-facing child is so great if the airbag deploys.

⚠️ WARNING

A child in a rear-facing child restraint can be seriously injured or killed if the right front passenger airbag inflates. This is because the back of the rear-facing child restraint would be very close to the inflating airbag. A child in a forward-facing child restraint can be seriously injured or killed if the right front passenger airbag inflates and the passenger seat is in a forward position.

Even if the passenger sensing system has turned off the right front passenger frontal airbag, no system is fail-safe. No one can guarantee that an airbag will not deploy under some unusual circumstance, even though it is turned off.

(Continued)

⚠️ WARNING (Continued)

Secure rear-facing child restraints in a rear seat, even if the airbag is off. If you secure a forward-facing child restraint in the right front seat, always move the front passenger seat as far back as it will go. It is better to secure the child restraint in a rear seat.

See Passenger Sensing System on page 3-25 for additional information.

When securing a child restraint in a rear seating position, study the instructions that came with the child restraint to make sure it is compatible with this vehicle.

Child restraints and booster seats vary considerably in size, and some may fit in certain seating positions better than others. Always make sure the child restraint is properly secured.
Depending on where you place the child restraint and the size of the child restraint, you may not be able to access adjacent safety belt assemblies or LATCH anchors for additional passengers or child restraints. Adjacent seating positions should not be used if the child restraint prevents access to or interferes with the routing of the safety belt. Wherever a child restraint is installed, be sure to secure the child restraint properly.

Keep in mind that an unsecured child restraint can move around in a collision or sudden stop and injure people in the vehicle. Be sure to properly secure any child restraint in the vehicle — even when no child is in it.

**Lower Anchors and Tethers for Children (LATCH System)**

The LATCH system holds a child restraint during driving or in a crash. This system is designed to make installation of a child restraint easier. The LATCH system uses anchors in the vehicle and attachments on the child restraint that are made for use with the LATCH system. Make sure that a LATCH-compatible child restraint is properly installed using the anchors, or use the vehicle’s safety belts to secure the restraint, following the instructions that came with that restraint, as well as the instructions in this manual. When installing a child restraint with a top tether, you must also use either the lower anchors or the safety belts to properly secure the child restraint. A child restraint must never be installed using only the top tether and anchor.

In order to use the LATCH system in the vehicle, you need a child restraint that has LATCH attachments. The child restraint manufacturer will provide you with instructions on how to use the child restraint and its attachments. The following explains how to attach a child restraint with these attachments in the vehicle.

Not all vehicle seating positions or child restraints have lower anchors and attachments or top tether anchors and attachments. Some child restraints with a top tether are designed to be used whether the top tether is anchored or not. Other child restraints require that the top tether be anchored. A national or local law may require that the top tether be anchored.

In Canada, the law requires that forward-facing child restraints have a top tether, and that the tether be attached.
3-42 Seats and Restraints

Convertible models do not have top tether anchors to secure a child restraint. If a national or local law requires that the top tether be anchored, do not use a child restraint in this vehicle because a top tether cannot be properly anchored.

Lower Anchors

Lower anchors (A) are metal bars built into the vehicle. There are two lower anchors for each LATCH seating position that will accommodate a child restraint with lower attachments (B).

Top Tether Anchor

A top tether (A, C) anchors the top of the child restraint to the vehicle. A top tether anchor is built into the vehicle. The top tether attachment (B) on the child restraint connects to the top tether anchor in the vehicle in order to reduce the forward movement and rotation of the child restraint during driving or in a crash.

The child restraint may have a single tether (A) or a dual tether (C). Either will have a single attachment (B) to secure the top tether to the anchor.

Some child restraints that have a top tether are designed for use with or without the top tether being attached. Others require the top tether always to be attached. In Canada, the law requires that forward-facing child restraints have a top tether, and that the tether be attached. Be sure to read and follow the instructions for the child restraint.
Lower Anchor and Top Tether Anchor Locations

Rear Seat — Coupe Model

(Top Tether Anchor): Seating positions with top tether anchors.

(Lower Anchor): Seating positions with two lower anchors.

Rear Seat — Convertible Model

(Lower Anchor): Seating positions with two lower anchors.

Lower Anchors

To assist in locating the lower anchors, each seating position with lower anchors has two labels, near the crease between the seatback and the seat cushion.

Top Tether Anchors

On coupe models, the top tether anchors are on the rear seatback filler panel. To assist in locating the top tether anchors, the top tether anchor symbol is on the cover of the anchor.
3-44 Seats and Restraints

Convertible top models do not have top tether anchors to be used to secure a child restraint in any seating position.

Be sure to use an anchor on the same side of the vehicle as the seating position where the child restraint will be placed.

Do not secure a child restraint in a position without a top tether anchor if a national or local law requires that the top tether be attached, or if the instructions that come with the child restraint say that the top tether must be attached.

According to accident statistics, children and infants are safer when properly restrained in a child restraint system or infant restraint system secured in a rear seating position. See Where to Put the Restraint on page 3-40 for additional information.

Securing a Child Restraint Designed for the LATCH System

⚠️ WARNING

If a LATCH-type child restraint is not attached to anchors, the child restraint will not be able to protect the child correctly. In a crash, the child could be seriously injured or killed. Install a LATCH-type child restraint properly using the anchors, or use the vehicle safety belts to secure the restraint, following the instructions that came with the child restraint and the instructions in this manual.
**WARNING**

Do not attach more than one child restraint to a single anchor. Attaching more than one child restraint to a single anchor could cause the anchor or attachment to come loose or even break during a crash. A child or others could be injured. To reduce the risk of serious or fatal injuries during a crash, attach only one child restraint per anchor.

**WARNING**

Children can be seriously injured or strangled if a shoulder belt is wrapped around their neck and the safety belt continues to tighten. Buckle any unused safety belts behind the child restraint so children cannot reach them. Pull the shoulder belt all the way out of the retractor to set the lock, if the vehicle has one, after the child restraint has been installed.

Notice: Do not let the LATCH attachments rub against the vehicle’s safety belts. This may damage these parts. If necessary, move buckled safety belts to avoid rubbing the LATCH attachments.

Do not fold the empty rear seat with a safety belt buckled. This could damage the safety belt or the seat. Unbuckle and return the safety belt to its stowed position, before folding the seat.

1. Attach and tighten the lower attachments to the lower anchors. If the child restraint does not have lower attachments, secure the child restraint with the safety belts and top tether, if equipped. Refer to the child restraint manufacturer instructions and the instructions in this manual.

1.1. Find the lower anchors for the desired seating position.

1.2. Put the child restraint on the seat.

1.3. Attach and tighten the lower attachments on the child restraint to the lower anchors.
2. On coupe models, if the child restraint manufacturer recommends that the top tether be attached, attach and tighten the top tether to the top tether anchor, if equipped. Refer to the child restraint instructions and the following steps:

2.1. Find the top tether anchor.

2.2. Route, attach, and tighten the top tether according to the child restraint instructions and the following instructions:

- If the child restraint has a single tether, route the tether over the seatback.
- If the child restraint has a dual tether, route the tether over the seatback.

3. Before placing a child in the child restraint, make sure it is securely held in place. To check, grasp the child restraint at the LATCH path and attempt to move it side to side and back and forth. There should be no more than 2.5 cm (1 in) of movement, for proper installation.

**Replacing LATCH System Parts After a Crash**

**WARNING**

A crash can damage the LATCH system in the vehicle. A damaged LATCH system may not properly secure the child restraint, resulting in serious injury or even death in a crash. To help make sure the LATCH system is working properly after a crash, see your dealer to have the system inspected and any necessary replacements made as soon as possible.

If the vehicle has the LATCH system and it was being used during a crash, new LATCH system parts may be needed. New parts and repairs may be necessary even if the LATCH system was not being used at the time of the crash.
Securing Child Restraints (Rear Seat)

When securing a child restraint in a rear seating position, study the instructions that came with the child restraint to make sure it is compatible with this vehicle.

If the child restraint has the LATCH system, see Lower Anchors and Tethers for Children (LATCH System) on page 3-41 for how and where to install your child restraint using LATCH. If a child restraint is secured in the vehicle using a safety belt and it uses a top tether, see Lower Anchors and Tethers for Children (LATCH System) on page 3-41 for top tether anchor locations.

Do not secure a child restraint in a position without a top tether anchor if a national or local law requires that the top tether be anchored, or if the instructions that come with the child restraint say that the top strap must be anchored.

In Canada, the law requires that forward-facing child restraints have a top tether, and that the tether be attached.

If the child restraint does not have the LATCH system, you will be using the safety belt to secure the child restraint in this position. Be sure to follow the instructions that came with the child restraint. Secure the child in the child restraint when and as the instructions say.

If more than one child restraint needs to be installed in the rear seat, be sure to read Where to Put the Restraint on page 3-40.

1. Put the child restraint on the seat.
2. Pick up the latch plate, and run the lap and shoulder portions of the vehicle’s safety belt through or around the restraint. The child restraint instructions will show you how.

3. Push the latch plate into the buckle until it clicks.

Position the release button on the buckle so that the safety belt could be quickly unbuckled if necessary.
4. Pull the shoulder belt all the way out of the retractor to set the lock. When the retractor lock is set, the belt can be tightened but not pulled out of the retractor.

5. To tighten the belt, push down on the child restraint, pull the shoulder portion of the belt to tighten the lap portion of the belt, and feed the shoulder belt back into the retractor. When installing a forward-facing child restraint, it may be helpful to use your knee to push down on the child restraint as you tighten the belt. Try to pull the belt out of the retractor to make sure the retractor is locked. If the retractor is not locked, repeat Steps 4 and 5.

6. If the child restraint has a top tether, follow the child restraint manufacturer’s instructions regarding the use of the top tether. See Lower Anchors and Tethers for Children (LATCH System) on page 3-41 for more information.

7. Before placing a child in the child restraint, make sure it is securely held in place. To check, grasp the child restraint at the safety belt path and attempt to move it side to side and back and forth. When the child restraint is properly installed, there should be no more than 2.5 cm (1 in) of movement.

To remove the child restraint, unbuckle the vehicle safety belt and let it return to the stowed position. If the top tether is attached to a top tether anchor, disconnect it.
Securing Child Restraints  
(Right Front Passenger Seat)

This vehicle has airbags. A rear seat is a safer place to secure a forward-facing child restraint. See Where to Put the Restraint on page 3-40.

In addition, the vehicle has a passenger sensing system which is designed to turn off the right front passenger frontal airbag under certain conditions. See Passenger Sensing System on page 3-25 and Passenger Airbag Status Indicator on page 5-17 for more information, including important safety information.

A label on the sun visor says, “Never put a rear-facing child seat in the front.” This is because the risk to the rear-facing child is so great if the airbag deploys.

A WARNING

A child in a rear-facing child restraint can be seriously injured or killed if the right front passenger airbag inflates. This is because the back of the rear-facing child restraint would be very close to the inflating airbag. A child in a forward-facing child restraint can be seriously injured or killed if the right front passenger airbag inflates and the passenger seat is in a forward position.

Even if the passenger sensing system has turned off the right front passenger frontal airbag, no system is fail-safe. No one can guarantee that an airbag will not deploy under some unusual circumstance, even though it is turned off.

(Continued)

WARNING (Continued)

Secure rear-facing child restraints in a rear seat, even if the airbag is off. If you secure a forward-facing child restraint in the right front seat, always move the front passenger seat as far back as it will go. It is better to secure the child restraint in a rear seat.

See Passenger Sensing System on page 3-25 for additional information.

If the child restraint has the LATCH system, see Lower Anchors and Tethers for Children (LATCH System) on page 3-41 for how and where to install the child restraint using LATCH. If a child restraint is secured using a safety belt and it uses a top tether, see Lower Anchors and Tethers for Children (LATCH System) on page 3-41 for top tether anchor locations.
3-50 Seats and Restraints

Do not secure a child seat in a position without a top tether anchor if a national or local law requires that the top tether be anchored, or if the instructions that come with the child restraint say that the top strap must be anchored.

In Canada, the law requires that forward-facing child restraints have a top tether, and that the tether be attached.

You will be using the lap-shoulder belt to secure the child restraint in this position. Follow the instructions that came with the child restraint.

1. Move the seat as far back as it will go before securing the forward-facing child restraint.

   When the passenger sensing system has turned off the right front passenger frontal airbag, the off indicator on the passenger airbag status indicator should light and stay lit when the vehicle is started. See Passenger Airbag Status Indicator on page 5-17.

2. Put the child restraint on the seat.

   If the seat has a safety belt guide, remove the safety belt from the guide by unsnapping the guide on the seat. Do not secure the child restraint with the safety belt routed through the guide.

3. Pick up the latch plate, and run the lap and shoulder portions of the vehicle's safety belt through or around the restraint. The child restraint instructions will show you how.

4. Push the latch plate into the buckle until it clicks.

   Position the release button on the buckle, so that the safety belt could be quickly unbuckled if necessary.
5. Pull the shoulder belt all the way out of the retractor to set the lock. When the retractor lock is set, the belt can be tightened but not pulled out of the retractor.

6. To tighten the belt, push down on the child restraint, pull the shoulder portion of the belt to tighten the lap portion of the belt, and feed the shoulder belt back into the retractor. When installing a forward-facing child restraint, it may be helpful to use your knee to push down on the child restraint as you tighten the belt. Try to pull the belt out of the retractor to make sure the retractor is locked. If the retractor is not locked, repeat Steps 5 and 6.

7. Before placing a child in the child restraint, make sure it is securely held in place. To check, grasp the child restraint at the safety belt path and attempt to move it side to side and back and forth. When the child restraint is properly installed, there should be no more than 2.5 cm (1 in) of movement.

If the airbag is off, the off indicator in the passenger airbag status indicator will come on and stay on when the vehicle is started.

If a child restraint has been installed and the on indicator is lit, see “If the On Indicator is Lit for a Child Restraint” under Passenger Sensing System on page 3-25 for more information.

To remove the child restraint, unbuckle the vehicle safety belt and let it return to the stowed position.

If the seat has a safety belt guide, return the safety belt into the guide by snapping the guide around the webbing.

Controls

Steering Wheel Adjustment

To adjust the steering wheel:
1. Pull the lever down.
2. Move the steering wheel up or down.
3. Pull or push the steering wheel closer or away from you.
4. Pull the lever up to lock the steering wheel in place.

Do not adjust the steering wheel while driving.

Steering Wheel Controls

Some audio controls can be adjusted at the steering wheel.
(Push to Talk): For vehicles with Bluetooth® or OnStar®, press to interact with those systems. See Bluetooth (Voice Recognition) on page 7-28 or Bluetooth (Infotainment Controls) on page 7-25 or Bluetooth (Overview) on page 7-23 or OnStar Overview on page 14-1.

(Mute/End Call): Press to reject an incoming call, or end a current call. Press to silence the vehicle speakers while using the infotainment system. Press again to turn the sound on.

(Toggle Switch): Press to select an audio source.

Turn up or down to select the next or previous favorite radio station or CD, or MP3 track.

(Volume): Press + or − to increase or decrease the volume.

Horn

Press 🅀 on the steering wheel pad to sound the horn.

Windshield Wiper/Washer

The windshield wiper lever is on the side of the steering column. With the ignition in ACC/ACCESSORY or ON/RUN, move the windshield wiper lever to select the wiper speed.

2: Use for fast wipes.

1: Use for slow wipes.

(Adjustable Interval Wipes): Move the lever up to 🅃 for adjustable interval wipes, then turn the band up for more frequent wipes or down for less frequent wipes.

(Off): Use to turn the windshield wipers off.

(Mist): To use for a single wipe, briefly move the wiper lever down. For several wipes, hold the wiper lever down.

(Windshield Washer): Pull the windshield wiper lever toward you to spray windshield washer fluid and activate the wipers.

The wipers will continue until the lever is released or the maximum wash time is reached.
5-4 Instruments and Controls

When the windshield wiper lever is released, additional wipes may occur depending on how long the windshield washer had been activated. See "Washer Fluid on page 10-32" for information on filling the windshield washer fluid reservoir.

**WARNING**

In freezing weather, do not use the washer until the windshield is warmed. Otherwise the washer fluid can form ice on the windshield, blocking your vision.

Clear ice and snow from the wiper blades before using them. If they are frozen to the windshield, carefully loosen or thaw them. Damaged wiper blades should be replaced. See "Wiper Blade Replacement on page 10-38".

Heavy snow or ice can overload the wipers. A circuit breaker stops them until the motor cools.

**Wipe Parking**

If the ignition is turned to LOCK/OFF while the wipers are on 1, 2, or 3, they will immediately stop.

If the windshield wiper lever is then moved to before the driver door is opened, or within 10 minutes, the wipers will restart and move to the base of the windshield.

If the ignition is turned to LOCK/OFF during a windshield wash, the wipers will stop when they reach the base of the windshield.

**Compass**

The vehicle may have a compass display on the Driver Information Center (DIC). The compass receives its heading and other information from the Global Positioning System (GPS) antenna, StabiliTrak, and vehicle speed information.

Avoid covering the GPS antenna for long periods of time with objects that may interfere with the antenna’s ability to receive a satellite signal. See "Backglass Antenna on page 7-14" and "Satellite Radio Antenna on page 7-14" for the location of the vehicle’s antennas. The compass system is designed to operate for a certain number of miles or degrees of turn before needing a signal from the GPS satellites. When the compass display shows CAL, drive the vehicle for a short distance in an open area where it can receive a GPS signal. The compass system will automatically determine when the GPS signal is restored and provide a heading again. See "Compass Messages on page 5-36" for more information on the messages that may be displayed for the compass.
Clock
The infotainment system controls are used to access the time and date settings through the menu system. The clock menu can only be used with the radio on while in ON/RUN or ACC/ACCESSORY. See Operation on page 7-4 for information about how to use the menu system.

Setting the Time and Date
1. Press the CONFIG button.
2. Select Time and Date Settings.
3. Select Set Time or Set Date.
4. Turn the MENU/SELECT knob to adjust the highlighted value.
5. Press the MENU/SELECT knob to select the next value.
6. To save the time or date and return to the Time and Date Settings menu, press the \( \text{BACK} \) button at any time or press the MENU/SELECT knob after adjusting the minutes or year.

Setting the 12/24 Hour Format
1. Press the CONFIG button.
2. Select Time and Date Settings.
3. Highlight 12/24 Hour Format.
4. Press the MENU/SELECT knob to select the 12 hour or 24 hour display format.

Setting the Month & Day Format
1. Press the CONFIG button.
2. Select Time and Date Settings.
3. Highlight Month & Day Format.
4. Press the MENU/SELECT knob to select MM/DD (month/day) or DD/MM (day/month).

Power Outlets
The vehicle has two accessory power outlets; one is located below the climate control system and the other is inside the center console storage. They can be used to plug in electrical equipment, such as a cell phone or an MP3 player.

The accessory power outlets do not work when the key is removed from the ignition and the driver door is opened. This helps to preserve the battery life of the vehicle.
Certain power accessory plugs may not be compatible with the accessory power outlet and could overload vehicle and adapter fuses. If a problem is experienced, see your dealer.

When adding electrical equipment, be sure to follow the proper installation instructions included with the equipment. See Add-On Electrical Equipment on page 9-68.

Notice: Hanging heavy equipment from the power outlet can cause damage not covered by the vehicle warranty. The power outlets are designed for accessory power plugs only, such as cell phone charge cords.

Warning Lights, Gauges, and Indicators

Warning lights and gauges can signal that something is wrong before it becomes serious enough to cause an expensive repair or replacement. Paying attention to the warning lights and gauges could prevent injury.

Warning lights come on when there could be a problem with a vehicle function. Some warning lights come on briefly when the engine is started to indicate they are working.

Gauges can indicate when there could be a problem with a vehicle function. Often gauges and warning lights work together to indicate a problem with the vehicle.

When one of the warning lights comes on and stays on while driving, or when one of the gauges shows there may be a problem, check the section that explains what to do. Follow this manual's advice. Waiting to do repairs can be costly and even dangerous.
Instrument Cluster

V8 English Shown, V6, Metric, and Manual Transmission Similar
5-8 Instruments and Controls

ZL1 English Shown, Metric and Manual Transmission Similar
Speedometer
The speedometer shows the vehicle's speed in either kilometers per hour (km/h) or miles per hour (mph).

Odometer
The odometer shows how far the vehicle has been driven, in either kilometers or miles.
This vehicle has a tamper-resistant odometer. If the vehicle needs a new odometer installed, the new one is set to the mileage of the old odometer. If this is not possible, it is set at zero and a label is put on the driver door to show the old mileage reading.

Trip Odometer
The trip odometer shows how far the vehicle has been driven since the trip odometer was last set to zero.
Set the odometer using the Driver Information Center (DIC).
To set the trip odometer to zero, press and hold the SET button while the trip odometer display is showing.

Tachometer
The tachometer displays the engine speed in revolutions per minute (rpm).

Fuel Gauge
Metric
When the fuel tank is low on fuel, a FUEL LEVEL LOW message will appear on the Driver Information Center (DIC). For more information see Fuel System Messages on page 5-39.

Here are some situations that can occur with the fuel gauge. None of these indicate a problem with the fuel gauge.

- At the gas station, the fuel pump shuts off before the gauge reads full.
- It takes a little more or less fuel to fill up than the fuel gauge indicated. For example, the gauge may have indicated the tank was half full, but it actually took a little more or less than half the tank's capacity to fill the tank.
- The pointer on the fuel gauge is on empty when the ignition is off.
This gauge, located near the shift lever, indicates vacuum during light to moderate throttle and boost under heavier throttle. It displays the air pressure level in the intake manifold before it enters the engine's combustion chamber.

The gauge is automatically centered at zero every time the engine is started. Actual vacuum or boost is displayed from this zero point. Changes in ambient pressure, such as driving in mountains and changing weather, will slightly change the zero reading.

**Engine Oil Pressure Gauge**

**English**

For vehicles with the oil pressure gauge, it is located near the shift lever, and shows the engine oil pressure in kPa (kilopascals) or psi (pounds per square inch) when the engine is running.
Oil pressure may vary with engine speed, outside temperature, and oil viscosity, but readings above the low pressure zone indicate the normal operating range. When the oil pressure reaches the low pressure zone, a message appears in the Driver Information Center (DIC). See Engine Oil Messages on page 5-38 and Engine Oil on page 10-13 for more information.

**WARNING**

Do not keep driving if the oil pressure is low. The engine can become so hot that it catches fire. Someone could be burned. Check the oil as soon as possible and have the vehicle serviced.

*Notice:* Lack of proper engine oil maintenance can damage the engine. Driving with the engine oil low can also damage the engine. The repairs would not be covered by the vehicle warranty. Check the oil level as soon as possible. Add oil if required, but if the oil level is within the operating range and the oil pressure is still low, have the vehicle serviced. Always follow the maintenance schedule for changing engine oil.

A reading in the low pressure zone can be caused by a dangerously low oil level or some other problem causing low oil pressure. Check the oil as soon as possible.
For vehicles with this gauge, it is near the shift lever and indicates engine oil temperature. If the gauge pointer moves to the higher end of the gauge, the engine oil temperature is operating hotter than normal. It is acceptable if this happens during aggressive driving or racetrack usage. The DIC will display a warning message if the engine oil temperature exceeds an acceptable level. See Engine Oil Messages on page 5-38 in DIC.

This gauge indicates the engine coolant temperature. If the gauge pointer moved to the H or the shaded area, the engine coolant is operating hotter than normal. It is acceptable if this happens during aggressive driving or racetrack usage. The DIC will display a warning message if the engine oil temperature exceeds an acceptable level. See Engine Cooling System Messages on page 5-37 in DIC.
5-14 Instruments and Controls

Transmission Temperature Gauge (Except ZL1)

For vehicles with this gauge, it is located near the shift lever, and shows the transmission oil temperature when the ignition is on.

If the gauge is reading in the red area and/or a message appears in the Driver Information Center (DIC), the vehicle must be stopped and the cause checked. One possible cause is a low fluid level in the transmission.

For information on the DIC messages see Transmission Messages on page 5-44.

Notice: If the vehicle is driven with the transmission temperature gauge above the normal operating range, the transmission can be damaged. This could lead to costly repairs that would not be covered by the vehicle warranty. Do not drive the vehicle while the transmission temperature gauge reading is above normal. See your dealer for service.

Voltmeter Gauge

For vehicles with this gauge, it is located near the shift lever, and shows the battery's state of charge in DC volts.
When the engine is running, and the ignition is on, this gauge shows the condition of the charging system. The vehicle’s charging system regulates voltage based on the state of charge of the battery. It is normal for the voltmeter to fluctuate. Readings between the low and high warning zones indicate the normal operating range.

Readings in the low warning zone can occur when a large number of electrical accessories are operating in the vehicle and the engine is left idling for an extended period.

If there is a problem with the battery charging system, a message appears in the Driver Information Center (DIC) and/or the charging system light comes on. See Battery Voltage and Charging Messages on page 5-35 and Charging System Light on page 5-18 for more information.

However, readings in either warning zone can indicate a possible problem in the electrical system. Have the vehicle serviced as soon as possible.

**Safety Belt Reminders**

**Driver Safety Belt Reminder Light**

There is a driver safety belt reminder light on the instrument panel cluster.

When the vehicle is started, this light flashes and a chime may come on to remind the driver to fasten their safety belt. Then the light stays on solid until the belt is buckled.

**Passenger Safety Belt Reminder Light**

When the vehicle is started, this light flashes and a chime may come on to remind front passengers to fasten their safety belt. Then the light stays on solid until the belt is buckled.

This cycle may continue several times if the driver remains or becomes unbuckled while the vehicle is moving.

If the driver safety belt is buckled, neither the light nor the chime comes on.

See Passenger Airbag Status Indicator on page 5-17.
5-16 Instruments and Controls

This cycle continues several times if the front passenger remains or becomes unbuckled while the vehicle is moving.

If the front passenger safety belt is buckled, neither the chime nor the light comes on.

The front passenger safety belt reminder light and chime may turn on if an object is put on the seat such as a briefcase, handbag, grocery bag, laptop, or other electronic device. To turn off the reminder light and/or chime, remove the object from the seat or buckle the safety belt.

**Airbag Readiness Light**

This light shows if there is an electrical problem with the airbag system. The system check includes the airbag sensor(s), passenger sensing system, the pretensioners, the airbag modules, the wiring, and the crash sensing and diagnostic module. For more information on the airbag system, see *Airbag System on page 3-17.*

The airbag readiness light comes on for several seconds when the vehicle is started. If the light does not come on then, have the vehicle fixed immediately.

**WARNING**

If the airbag readiness light stays on after the vehicle is started or comes on while driving, it means the airbag system might not be working properly. The airbags in the vehicle might not inflate in a crash, or they could even inflate without a crash. To help avoid injury, have the vehicle serviced right away.
Passenger Airbag Status Indicator
The vehicle has a passenger sensing system. See Passenger Sensing System on page 3-25 for important safety information. The overhead console has a passenger airbag status indicator.

When the vehicle is started, the passenger airbag status indicator will light ON and OFF, or the symbol for on and off, for several seconds as a system check. If you are using remote start, if equipped, to start your vehicle from a distance, you may not see the system check. Then, after several seconds, the status indicator will light either ON or OFF, or either the on or off symbol, to let you know the status of the right front passenger frontal airbag.

If the word ON or the on symbol is lit on the passenger airbag status indicator, it means that the right front passenger frontal airbag is enabled (may inflate).

If the word OFF or the off symbol is lit on the passenger airbag status indicator, it means that the passenger sensing system has turned off the right front passenger frontal airbag.

If, after several seconds, both status indicator lights remain on, or if there are no lights at all, there may be a problem with the lights or the passenger sensing system. See your dealer for service.

⚠️ WARNING
If the airbag readiness light ever comes on and stays on, it means that something may be wrong with the airbag system. To help avoid injury to yourself or others, have the vehicle serviced right away. See Airbag Readiness Light on page 5-16 for more information, including important safety information.
5-18 Instruments and Controls

Charging System Light

The charging system light comes on briefly when the ignition is turned on, but the engine is not running, as a check to show the light is working. It should go out when the engine is started.

If the light stays on, or comes on while driving, there may be a problem with the electrical charging system. Have it checked by your dealer. Driving while this light is on could drain the battery.

When this light comes on, the Driver Information Center (DIC) also displays a message.

See Battery Voltage and Charging Messages on page 5-35.

Malfunction Indicator Lamp

A computer system called OBD II (On-Board Diagnostics-Second Generation) monitors the operation of the vehicle to ensure emissions are at acceptable levels, to produce a cleaner environment. This light comes on when the vehicle is placed in ON/RUN, as a check to show it is working. If it does not, have the vehicle serviced by your dealer. See Ignition Positions on page 9-20 for more information.

If a short distance must be driven with the light on, be sure to turn off all accessories, such as the radio and air conditioner.

If the malfunction indicator lamp comes on and stays on while the engine is running, this indicates that there is an OBD II problem and service is required.

Malfunctions often are indicated by the system before any problem is apparent. Being aware of the light can prevent more serious damage to the vehicle. This system assists the service technician in correctly diagnosing any malfunction.

Notice: If the vehicle is continually driven with this light on, the emission controls might not work as well, the vehicle fuel economy might not be as good, and the engine might not run as smoothly. This could lead to costly repairs that might not be covered by the vehicle warranty.
Notice: Modifications made to the engine, transmission, exhaust, intake, or fuel system of the vehicle or the replacement of the original tires with other than those of the same Tire Performance Criteria (TPC) can affect the vehicle’s emission controls and can cause this light to come on. Modifications to these systems could lead to costly repairs not covered by the vehicle warranty. This could also result in a failure to pass a required Emission Inspection/Maintenance test. See Accessories and Modifications on page 10-4.

This light comes on during a malfunction in one of two ways:

Light Flashing: A misfire condition has been detected. A misfire increases vehicle emissions and could damage the emission control system on the vehicle. Diagnosis and service might be required.

To prevent more serious damage to the vehicle:
- Reduce vehicle speed.
- Avoid hard accelerations.
- Avoid steep uphill grades.

If the light continues to flash, stop and park the vehicle. Turn the vehicle off, wait at least 10 seconds, and restart the engine. If the light is still flashing, follow the previous steps and see your dealer for service as soon as possible.

Light On Steady: An emission control system malfunction has been detected on the vehicle. Diagnosis and service might be required.

The following may correct an emission system malfunction:
- Check that the fuel cap is fully installed. See Filling the Tank on page 9-59. The diagnostic system can determine if the fuel cap has been left off or improperly installed. A loose or missing fuel cap allows fuel to evaporate into the atmosphere. A few driving trips with the cap properly installed should turn the light off.
- Check that good quality fuel is used. Poor fuel quality causes the engine not to run as efficiently as designed and may cause stalling after start-up, stalling when the vehicle is changed into gear, misfiring, hesitation on acceleration, or stumbling on acceleration. These conditions might go away once the engine is warmed up.
If one or more of these conditions occurs, change the fuel brand used. It will require at least one full tank of the proper fuel to turn the light off. See *Recommended Fuel on page 9-56.*

If none of the above have made the light turn off, your dealer can check the vehicle. The dealer has the proper test equipment and diagnostic tools to fix any mechanical or electrical problems that might have developed.

**Emissions Inspection and Maintenance Programs**

Some local governments may have programs to inspect the on-vehicle emission control equipment. For the inspection, the emission system test equipment is connected to the vehicle’s Data Link Connector (DLC).

The DLC is under the instrument panel on the outboard side of the steering wheel. See your dealer if assistance is needed.

The vehicle may not pass inspection if:

- The malfunction indicator lamp is on with the engine running, or if the light does not come on when the ignition is turned to ON/RUN while the engine is off.
- The OBD II (On-Board Diagnostics) system determines that critical emission control systems have not been completely diagnosed. The vehicle would be considered not ready for inspection. This can happen if the 12-volt battery has recently been replaced or run down. The diagnostic system is designed to evaluate critical emission control systems during normal driving. This can take several days of routine driving. If this has been done and the vehicle still does not pass the inspection for lack of OBD II system readiness, your dealer can prepare the vehicle for inspection.
Brake System Warning Light

The vehicle brake system consists of two hydraulic circuits. If one circuit is not working, the remaining circuit can still work to stop the vehicle. For normal braking performance, both circuits need to be working.

If the warning light comes on, there is a brake problem. Have the brake system inspected right away.

When the ignition is on, the brake system warning light also comes on when the parking brake is set. The light stays on if the parking brake does not fully release. If it stays on after the parking brake is fully released, it means the vehicle has a brake problem.

If, while driving, the light comes on and a brake message comes on the Driver Information Center (DIC), pull off the road and stop carefully. The pedal could be harder to push or the pedal can go closer to the floor. It could take longer to stop. If the light is still on, have the vehicle towed for service. See Antilock Brake System (ABS) Warning Light on page 5-22 and Towing the Vehicle on page 10-96.

The brake message remains on until the MENU button is pressed. The brake light remains until the problem is fixed. See Brake System Messages on page 5-35 for more information.

---

**WARNING**

The brake system might not be working properly if the brake system warning light is on. Driving with the brake system warning light on can lead to a crash. If the light is still on after the vehicle has been pulled off the road and carefully stopped, have the vehicle towed for service.
5-22  Instruments and Controls

Antilock Brake System (ABS) Warning Light

This light comes on briefly when the engine is started. If the light does not come on, have it fixed so it will be ready to warn if there is a problem. If the ABS light stays on, turn the ignition off. If the light comes on while driving, stop as soon as it is safely possible and turn off the vehicle. Then start the engine again to reset the system. If the ABS light stays on, or comes on again while driving, the vehicle needs service. A chime may also sound when the light comes on steady.

If the ABS light is the only light on, the vehicle has regular brakes, but the antilock brakes are not functioning.

If both the ABS and the brake system warning light are on, the vehicle's antilock brakes are not functioning and there is a problem with the regular brakes. See your dealer for service.

See Brake System Warning Light on page 5-21 and Brake System Messages on page 5-35.

Traction Off Light

This light comes on when the Traction Control System (TCS) has been turned off by pressing and releasing the TCS/StabiliTrak button. This light also comes on and the system turns off if there is a problem with the TCS.

If the light comes on and stays on for an extended period of time while the system is turned on, the vehicle needs service.

See Traction Control System (TCS) on page 9-41 and StabiliTrak System on page 9-43.
**Traction Control System (TCS)/StabiliTrak® Light**

The StabiliTrak system or the Traction Control System (TCS) indicator/warning light comes on briefly while starting the engine.

If it does not, have the vehicle serviced by your dealer. If the system is working normally, the indicator light will then go off.

The indicator/warning light flashes while the StabiliTrak or TCS system is working to control the vehicle on a low traction surface.

If the TCS indicator/warning light comes on and stays on while driving, the vehicle needs service.

See **Traction Control System (TCS) on page 9-41 and StabiliTrak® System on page 9-43** for more information.

**Traction Control System (TCS) OFF/StabiliTrak® OFF Light**

This light should come on briefly as the engine is started. If it does not come on, have the vehicle serviced by your dealer.

This light comes on when the StabiliTrak system is turned off. If the TCS is off, wheel spin is not limited. If the StabiliTrak system is off, the system does not assist in controlling the vehicle. Turn on the TCS and the StabiliTrak system and the warning light turns off.

For SS models, when both TCS and StabiliTrak lights are on, the vehicle is in Competitive Mode. A warning also appears in the DIC for StabiliTrak Competitive Mode. See **Ride Control System Messages on page 5-40**.

For ZL1, when both TCS and StabiliTrak lights are on, the vehicle is in Performance Traction Management or both TCS and StabiliTrak systems are disabled.

See **Traction Control System (TCS) on page 9-41, StabiliTrak® System on page 9-43 and Competitive Driving Mode on page 9-44**.
5-24 Instruments and Controls

Tire Pressure Light

For vehicles with the Tire Pressure Monitor System (TPMS), this light comes on briefly when the engine is started. It provides information about tire pressures and the TPMS.

When the Light Is On Steady
This indicates that one or more of the tires are significantly underinflated.

A Driver Information Center (DIC) tire pressure message may also display. See Tire Messages on page 5-43. Stop as soon as possible, and inflate the tires to the pressure value shown on the Tire and Loading Information label. See Tire Pressure on page 10-62.

When the Light Flashes First and Then Is On Steady
If the light flashes for about a minute and then stays on, there may be a problem with the TPMS. If the problem is not corrected, the light will come on at every ignition cycle. See Tire Pressure Monitor Operation on page 10-65.

Engine Oil Pressure Light

Notice: Lack of proper engine oil maintenance can damage the engine. Driving with the engine oil low can also damage the engine. The repairs would not be covered by the vehicle warranty. Check the oil level as soon as possible. Add oil if required, but if the oil level is within the operating range and the oil pressure light remains lit, have the vehicle serviced. Always follow the maintenance schedule for changing engine oil.
Immobilizer Light

The immobilizer light should come on briefly as the engine is started. If it does not come on, have the vehicle serviced by your dealer. If the system is working normally, the indicator light turns off.

If the light stays on and the engine does not start, there could be a problem with the theft-deterrent system. See Vehicle Security on page 2-11.

High-Beam On Light

This light comes on when the high-beam headlamps are in use. See Headlamp High/Low-Beam Changer on page 6-2.

Front Fog Lamp Light

The front fog lamp light comes on when the fog lamps are in use.

The light goes out when the fog lamps are turned off. See Front Fog Lamps on page 6-5.

Taillamp Indicator Light

This light comes on when the taillamps are in use.

Cruise Control Light

This light is white when the cruise control is active and green when the system is set.

The light goes out when the cruise control is turned off. See Cruise Control on page 9-50.
5-26 Instruments and Controls

Information Displays

Driver Information Center (DIC)

The vehicle may have a DIC. The DIC displays information about your vehicle. It also displays warning messages if a system problem is detected. See Vehicle Messages on page 5-35. All messages appear in the DIC display located in the center of the instrument panel cluster.

The vehicle may also have features that can be customized through the controls on the radio. See Vehicle Personalization on page 5-46.

DIC Operation and Displays

The DIC has different displays which can be accessed by using the DIC buttons on the turn signal lever located on the left side of the steering wheel. The DIC displays trip, fuel, vehicle system information, and warning messages if a system problem is detected.

The bottom of the DIC display shows what position the shift lever is in (Automatic Transmission Only), the odometer, and the direction the vehicle is driving.

DIC Buttons

A. SET/CLR: Use this button to set or clear the menu item when it is displayed.

B. △ / ▽ (Thumbwheel): Use the thumbwheel to scroll through the items in each menu.

C. Menu: Press this button to get to the Trip/Fuel Menu and the Vehicle Information Menu. Some models may also have a Performance Menu.

Trip/Fuel Menu Items

Press the MENU button on the turn signal lever until Trip/Fuel Information Menu is displayed. Use the thumbwheel to scroll through the following menu items:

- Digital Speedometer
- Trip 1
- Trip 2
- Fuel Range
- Average Fuel Economy
- Average Vehicle Speed
- Turn-by-Turn
- Blank

Digital Speedometer

The speedometer shows how fast the vehicle is moving in either kilometers per hour (km/h) or miles per hour (mph). The speedometer cannot be reset.
Trip 1 and Trip 2
The Trip display shows the current distance traveled, in either kilometers (km) or miles (mi), since the last reset for the trip odometer. The trip odometer can be reset to zero by pressing the trip reset stem or the SET/CLR button while the trip odometer display is showing.

Fuel Range
The Fuel Range display shows the approximate distance the vehicle can be driven without refueling. The fuel range estimate is based on an average of the vehicle's fuel economy over recent driving history and the amount of fuel remaining in the fuel tank. Fuel range cannot be reset.

Average Fuel Economy
The Average Fuel Economy display shows the approximate average liters per 100 kilometers (L/100 km) or miles per gallon (mpg). This number is calculated based on the number of L/100 km (mpg) recorded since the last time this menu item was reset. The fuel economy can be reset by pressing the SET/CLR button while the Average Fuel Economy display is showing.

Average Vehicle Speed
The Average Vehicle Speed display shows the average speed of the vehicle in kilometers per hour (km/h) or miles per hour (mph). This average is calculated based on the various vehicle speeds recorded since the last reset of this value. The average speed can be reset by pressing the SET/CLR button while the Average Vehicle Speed display is showing.

Turn-by-Turn
This display is used for the OnStar Turn-by-Turn guidance. See OnStar Overview on page 14-1.

Blank Display
This display shows no information.

Vehicle Information Menu Items
Press the MENU button on the turn signal lever until Vehicle Information Menu is displayed. Use the thumbwheel to scroll through the following menu items:
- Unit
- Tire Pressure
- Remaining Oil Life
- Coolant Temp
- Battery Voltage
- Speed Warning
**5-28 Instruments and Controls**

**Unit**
Move the thumbwheel up or down to switch between US or Metric when the Unit display is active. Press SET/CLR to confirm the setting. This will change the displays on the cluster and DIC to either English (US) or metric measurements.

**Tire Pressure**
The display will show a vehicle with the approximate pressures of all four tires. Tire pressure is displayed in either kilopascal (kPa) or in pounds per square inch (psi). See Tire Pressure Monitor System on page 10-64 and Tire Pressure Monitor Operation on page 10-65.

**Remaining Oil Life**
This display shows an estimate of the oil's remaining useful life. If REMAINING OIL LIFE 99% is displayed, that means 99% of the current oil life remains.

When the remaining oil life is low, the CHANGE ENGINE OIL SOON message will appear on the display. See Engine Oil Messages on page 5-38. The oil should be changed as soon as possible. See Engine Oil on page 10-13. In addition to the engine oil life system monitoring the oil life, additional maintenance is recommended in the Maintenance Schedule. See Maintenance Schedule on page 11-3.

Remember, the Oil Life display must be reset after each oil change. It will not reset itself. Also, be careful not to reset the Oil Life display accidentally at any time other than when the oil has just been changed. It cannot be reset accurately until the next oil change. To reset the engine oil life system press the SET/CLR button while the Oil Life display is active. See Engine Oil Life System on page 10-16.

**Coolant Temperature**
This display, available on some vehicles, shows the temperature of the engine cooling system fluid in either degrees Celsius (°C) or degrees Fahrenheit (°F).

**Battery Voltage**
This display, available on some vehicles, shows the current battery voltage. If the voltage is in the normal range, the value will display. For example, the display may read Battery Voltage 15.0 Volts. The vehicle’s charging system regulates voltage based on the state of the battery. The battery voltage can fluctuate while viewing this information on the DIC. This is normal. See Charging System Light on page 5-18. If there is a problem with the battery charging system, the DIC will display a message. See Battery Voltage and Charging Messages on page 5-35.
**Speed Warning**

Speed Warning allows the driver to set a speed that they do not want to exceed. To set the Speed Warning, press SET/CLR when Speed Warning is displayed.

**Performance Menu**

Some vehicles may have a performance menu. Press the MENU button on the turn signal lever until Performance Menu is displayed. Use the thumbwheel to scroll through the following menu items:

- Lap Timer
- Coolant Temperature and Battery Voltage

**Lap Timer**

The Lap Timer display shows total time, lap times, top speed, average speed, and average time when active.

While in this display, press SET/CLR to activate the lap timer function. While timer is active, press MENU to store the current lap time and start timer for new lap. Press SET/CLR to pause or resume lap timer. Press and hold SET/CLR to clear and exit the lap timer function.

**Coolant Temperature and Battery Voltage**

The coolant temperature display shows the temperature of the engine cooling system fluid in either degrees Celsius (°C) or degrees Fahrenheit (°F).

The battery voltage display shows the current battery voltage. The vehicle’s charging system regulates voltage based on the state of the battery. The battery voltage can fluctuate while viewing this information on the DIC. This is normal. See Charging System Light on page 5-18. If there is a problem with the battery charging system, the DIC will display a message. See Battery Voltage and Charging Messages on page 5-35.

**Compass**

The vehicle may have a compass display in the Driver Information Center (DIC). See Compass on page 5-4.
5-30 Instruments and Controls

Head-Up Display (HUD)

⚠️ WARNING

If the HUD image is too bright or too high in your field of view, it may take you more time to see things you need to see when it is dark outside. Be sure to keep the HUD image dim and placed low in your field of view.

For vehicles with the Head-Up Display (HUD), some information concerning the operation of the vehicle is projected onto the windshield. This includes but is not limited to the speedometer reading, rpm reading, transmission position, outside air temperature, compass heading, and a brief display of the current radio station, including XM information or CD track. It will also display turn-by-turn information if the vehicle has OnStar® service.

The images are projected through the HUD lens located on the driver side of the instrument panel.

Notice: If you try to use the HUD image as a parking aid, you may misjudge the distance and damage your vehicle. Do not use the HUD image as a parking aid.

The tap shift gear will also appear on the HUD if the vehicle has tap shift and it is active. The shift timing lights and a lateral acceleration (G-Force) indicator appear on ZL1 models only.

The HUD information can be displayed in one of three languages: English, French, or Spanish. The speedometer reading and other numerical values can be displayed in either English or metric units.

The language selection is changed through the radio and the units of measurement selection is changed through the trip computer in the Driver Information Center (DIC).

See AM-FM Radio on page 7-8 and Driver Information Center (DIC) on page 5-26.

HUD Display on the Vehicle Windshield

The HUD information appears as an image focused out toward the front of the vehicle.

When the ignition key is turned to ON/RUN, the HUD will display an introductory message for a short time, until the HUD is ready.
The following indicator lights come on the instrument panel when activated and may also appear on the HUD:

- Turn Signal Indicators
- High-Beam Indicator Symbol

The HUD temporarily displays ICE POSSIBLE DRIVE WITH CARE when this message is on the DIC trip computer.

The HUD also temporarily displays the following messages on vehicles with these systems, when they are active:

- Check Tire Pressure
- Cruise Set To
- Low Fuel
- Speed Limited To
- Traction Control Active
- Stability Control Active

When the HUD is on, the speedometer reading is continually displayed. The current radio station or CD track number may display for a short period of time after the radio or CD track status changes. This may happen whenever radio information is changed. The speedometer size is reduced when radio, CD information, or warnings are displayed on the HUD.

When the phone feature is activated, the HUD will briefly display phone information, if available.

The HUD control is located to the right of the steering wheel.

To adjust the HUD image so that items are properly displayed:

1. Adjust the driver seat to a comfortable position.
2. Start the engine.
3. Adjust the HUD controls.
5-32 Instruments and Controls

Use the following settings to adjust the HUD.

**OFF:** Turn the HUD dimming knob fully counterclockwise until the HUD display turns off.

**Brightness:** Turn the dimming knob clockwise or counterclockwise to brighten or dim the display.

∧ *(Up): V *(Down): Press the up or down arrows to center the HUD image in your view. The HUD image can only be adjusted up and down, not side to side.

**PAGE:** Press to select the display formats. Release the PAGE button when the format number with the desired display is shown on the HUD. If vehicle messages are displayed, pressing PAGE may clear the message.

The four formats are as follows:

**Format One:** This display gives the speedometer reading (in English or metric units), turn signal indication, high-beam indication, transmission positions, outside air temperature, and compass heading.

**Format Two:** This display includes the information in Format One without the transmission information, the outside air temperature, and compass heading.
Format Three: This display includes the information in Format One along with a circular tachometer, but without outside air temperature and compass heading.

Format Four: This display appears on ZL1 models only. It gives the speedometer reading (in English or metric units), transmission positions (automatic transmission only), Shift Timing Light Position and lateral acceleration (G) indicators. The radio, CD, navigation, and phone information do not appear in the format four HUD display.

The shift timing lights at the top of the display will appear with increase in engine RPM. See Automatic Transmission on page 9-37 or Manual Transmission on page 9-37 for more information.

When you near your destination, the HUD will display a distance bar that will empty the closer you get to your destination.
5-34 Instruments and Controls

All navigation information is provided to the HUD by the OnStar® service, for vehicles with this feature.

The HUD image displayed on the windshield will automatically dim and brighten to compensate for outside lighting. However, the HUD brightness control can still be adjusted as needed.

The HUD image can temporarily light up depending on the angle and position of the sunlight on the HUD display. This is normal and will change when the angle of the sunlight on the HUD display changes.

Polarized sunglasses could make the HUD image harder to see.

Care of the HUD
Clean the inside of the windshield as needed to remove any dirt or film that could reduce the sharpness or clarity of the HUD image.

To clean the HUD lens, use a soft, clean cloth that has household glass cleaner sprayed on it. Wipe the HUD lens gently, then dry it. Do not spray cleaner directly on the lens because the cleaner could leak into the unit.

If You Cannot See the HUD Image When the Ignition Is On
- Is anything covering the HUD lens?
- Is the HUD dimmer setting bright enough?
- Is the HUD image adjusted to the proper height?
- Are you wearing polarized sunglasses?

If the HUD Image Is Not Clear
- Is the HUD image too bright?
- Are the windshield and HUD lens clean?

If the HUD image is not correct, contact your dealer.

Keep in mind that the windshield is part of the HUD system.
Vehicle Messages
Messages displayed on the DIC indicate the status of the vehicle or some action that may be needed to correct a condition. Multiple messages may display one after the other.

The messages that do not require immediate action can be acknowledged and cleared by pressing SET/CLR. The messages that require immediate action cannot be cleared until that action is performed. All messages should be taken seriously and clearing the messages does not correct the problem.

Battery Voltage and Charging Messages

BATTERY SAVER ACTIVE
This message displays when the vehicle has detected that the battery voltage is dropping beyond a reasonable point. The battery saver system starts reducing certain features of the vehicle that you may be able to notice. At the point that features are disabled, this message is displayed. It means that the vehicle is trying to save the charge in the battery. Turn off unnecessary accessories to allow the battery to recharge.

LOW BATTERY
This message is displayed when the battery voltage is low. See Battery on page 10-35.

SERVICE BATTERY CHARGING SYSTEM
This message is displayed when there is a fault in the battery charging system. Take the vehicle to your dealer for service.

Brake System Messages

BRAKE FLUID LOW
This message is displayed when the brake fluid level is low; see Brake Fluid on page 10-34.

RELEASE PARKING BRAKE
This message is displayed as a reminder that the parking brake is on. Release it before you attempt to drive.
5-36 Instruments and Controls

Compass Messages

**CAL**
This message is displayed when the compass needs to be calibrated. See *Compass* on page 5-4.

---

Dashes will be displayed if the compass needs service. See your dealer for service.

Convertible Top Messages

**BATTERY VOLTAGE TOO LOW – TOP DISABLED**
This message displays when the battery voltage is too low to operate the convertible top.

**EXTEND CARGO SHADE TO OPERATE**
This message displays if the rear trunk partition is not extended and engaged.

**CLOSE TRUNK TO OPERATE TOP**
This message displays if the trunk is open while you are trying to operate the convertible top. Make sure the trunk is closed before operating the convertible top. See *Convertible Top on page 2-19.*

**COMPLETE TOP MOTION TO OPEN TRUNK**
This message displays if attempting to open the trunk before the top has been fully opened or closed.

**REDUCE VEHICLE SPEED TO OPERATE TOP**
This message is displayed when the vehicle is moving too fast to safely operate the convertible top. Reduce the vehicle speed.

**TEMPERATURE TOO LOW – TOP DISABLED**
This message displays and a sound will be heard when the power convertible top button is pressed and the power convertible top pump motor temperature is below 0°C (32°F). Wait for the power convertible top pump motor to warm up before using the power convertible top.

**TOP NOT SECURE**
This message displays when the power convertible top is closed without the convertible top front latch engaged or when the folding top is not fully stowed. Press and hold the convertible top button in the open direction until a beep is heard or close the top and engage the latch.
TOP SYSTEM OVERHEATED, PLEASE WAIT
This message displays and a sound will be heard when the power convertible top button is pressed and the power convertible top pump motor is overheated. Wait for the power convertible top pump motor to cool down before using the power convertible top.

UNLATCH TOP
This message displays and a sound will be heard if you try to lower the convertible top without first releasing the front latch. See Convertible Top on page 2-19.

Cruise Control Messages
CRUISE SET TO XXX
This message displays when the cruise control is set and shows the speed it was set to. See Cruise Control on page 9-50.

Door Ajar Messages
DRIVER DOOR OPEN
This message will display when the driver door is open. Close the door completely.

HOOD OPEN
This message will display when the hood is open. Close the hood completely.

PASSENGER DOOR OPEN
This message will display when the passenger door is open. Close the door completely.

TRUNK OPEN
This message will display when the trunk is open. Close the trunk completely.

Engine Cooling System Messages
A/C OFF DUE TO HIGH ENGINE TEMP
This message displays when the engine coolant becomes hotter than the normal operating temperature. To avoid added strain on a hot engine, the air conditioning compressor automatically turns off. When the coolant temperature returns to normal, the air conditioning compressor turns back on. You can continue to drive the vehicle.

If this message continues to appear, have the system repaired by your dealer as soon as possible to avoid damage to the engine.
5-38  Instruments and Controls

COOLANT LEVEL LOW ADD COOLANT
This message will display if the coolant is low. See Engine Coolant on page 10-24.

ENGINE OVERHEATED — IDLE ENGINE
This message displays when the engine coolant temperature is too hot. Stop and allow the vehicle to idle until it cools down.

ENGINE OVERHEATED — STOP ENGINE
This message displays and a continuous chime sounds if the engine cooling system reaches unsafe temperatures for operation. Stop and turn off the vehicle as soon as it is safe to do so to avoid severe damage. This message clears when the engine has cooled to a safe operating temperature.

Engine Oil Messages

CHANGE ENGINE OIL SOON
This message displays when the engine oil needs to be changed. When you change the engine oil, be sure to reset the Oil Life System. See Engine Oil Life System on page 10-16, Driver Information Center (DIC) on page 5-26, Engine Oil on page 10-13 and Maintenance Schedule on page 11-3.

ENGINE OIL HOT, IDLE ENGINE
This message displays when the engine oil temperature is too hot. Stop and allow the vehicle to idle until it cools down.

ENGINE OIL LOW — ADD OIL
This message displays when the engine oil level is too low. Check the oil level. See Engine Oil on page 10-13.

OIL PRESSURE LOW — STOP ENGINE
This message displays if low oil pressure levels occur. Stop the vehicle as soon as safely possible and do not operate it until the cause of the low oil pressure has been corrected. Check the oil as soon as possible and have the vehicle serviced by your dealer.

Engine Power Messages

ENGINE POWER IS REDUCED
This message displays when the vehicle’s engine power is reduced. Reduced engine power can affect the vehicle’s ability to accelerate. If this message is on, but there is no reduction in performance, proceed to your destination. The performance may be reduced the next time the vehicle is driven. The vehicle may be driven at a reduced speed while this message is on, but maximum acceleration and speed may be reduced.
Anytime this message stays on, the vehicle should be taken to your dealer for service as soon as possible.

**Fuel System Messages**

**FUEL LEVEL LOW**
This message displays when the vehicle is low on fuel. Refuel as soon as possible.

**TIGHTEN GAS CAP**
This message displays when the fuel cap is not on tight. Tighten the fuel cap.

**Key and Lock Messages**

**NUMBER OF KEYS PROGRAMMED**
This message displays when programming new keys to the vehicle.

**Replace Battery in Remote Key**
This message displays when the battery in the Remote Keyless Entry (RKE) transmitter needs to be replaced.

**Lamp Messages**

**Automatic Light Control On**
This message is displayed when the automatic light control has been turned on. See Automatic Headlamp System on page 6-3.

**Automatic Light Control Off**
This message is displayed when the automatic light control has been turned off. See Automatic Headlamp System on page 6-3.

**Left Front Turn Indicator Failure**
This message is displayed if the turn signal bulb needs to be replaced. See Headlamps, Front Turn Signal and Parking Lamps (Uplevel Vehicle) on page 10-43 or Headlamps, Front Turn Signal and Parking Lamps (Base Vehicle) on page 10-42 and Replacement Bulbs on page 10-46.

**Left Rear Turn Indicator Failure**
This message is displayed if the turn signal bulb needs to be replaced. See Bulb Replacement on page 10-41.
5-40 Instruments and Controls

RIGHT FRONT TURN INDICATOR FAILURE
This message is displayed if the turn signal bulb needs to be replaced. See Headlamps, Front Turn Signal and Parking Lamps (Uplevel Vehicle) on page 10-43 or Headlamps, Front Turn Signal and Parking Lamps (Base Vehicle) on page 10-42 and Replacement Bulbs on page 10-46.

RIGHT REAR TURN INDICATOR FAILURE
This message is displayed if the turn signal bulb needs to be replaced. See Bulb Replacement on page 10-41.

TURN SIGNAL ON
This message is displayed if the turn signal has been left on. Turn off the turn signal.

Object Detection System Messages

PARK ASSIST OFF
This message displays when the park assist system has been turned off or when there is a temporary condition causing the system to be disabled. See Ultrasonic Parking Assist on page 9-52.

SERVICE PARK ASSIST
This message displays if there is a problem with the Ultrasonic Rear Parking Assist (URPA) system. Do not use this system to help you park. See Ultrasonic Parking Assist on page 9-52. See your dealer for service.

Ride Control System Messages

PERF TRACTION 1 – WET
ACTIVE HANDLING ON
SUSPENSION MODE TOUR
(ZL1 Only)
This message displays when this Performance Traction Management mode is selected. The instrument panel cluster light will also be on when this mode is selected. Once this message is acknowledged, PTM1 – WET ESC = ON displays on the bottom of the digital speed page. Launch Control is available when this mode is selected. In this mode, the Traction Control and Active Handling System are available but intended for use on wet race track conditions. Adjust your driving accordingly. See “Performance Traction Management (PTM) (ZL1 Only)” and “Launch Control (V8 with Manual Transmission Only)” under Competitive Driving Mode on page 9-44.
**Instruments and Controls 5-41**

**PERF TRACTION 2 – DRY**

**ACTIVE HANDLING ON**

**SUSPENSION MODE TOUR**

(ZL1 Only)

This message displays when this Performance Traction Management mode is selected. The instrument panel cluster light will also be on when this mode is selected. Once this message is acknowledged, PTM2 – DRY ESC = ON displays on the bottom of the digital speed page. Launch Control is available when this mode is selected. In this mode, the Traction Control and Active Handling System are available but intended for use on dry race track conditions. Adjust your driving accordingly. See “Performance Traction Management (PTM) (ZL1 Only)” and “Launch Control (V8 with Manual Transmission Only)” under Competitive Driving Mode on page 9-44.

**PERF TRACTION 3 – SPORT1**

**ACTIVE HANDLING ON**

**SUSPENSION MODE SPORT**

(ZL1 Only)

This message displays when this Performance Traction Management mode is selected. The instrument panel cluster light will also be on when this mode is selected. Once this message is acknowledged, PTM3 – SPORT1 ESC = ON displays on the bottom of the digital speed page. Launch Control is available when this mode is selected. In this mode, the Traction Control and Active Handling System are available but intended for use on dry race track conditions. Adjust your driving accordingly. See “Performance Traction Management (PTM) (ZL1 Only)” and “Launch Control (V8 with Manual Transmission Only)” under Competitive Driving Mode on page 9-44.

**PERF TRACTION 4 – SPORT2**

**ACTIVE HANDLING OFF**

**SUSPENSION MODE SPORT**

(ZL1 Only)

This message displays when this Performance Traction Management mode is selected. The instrument panel cluster light will also be on when this mode is selected. Once this message is acknowledged, PTM4 – SPORT2 ESC = OFF displays on the bottom of the digital speed page. Launch Control is available when this mode is selected. In this mode, the Traction Control is available but intended for use on dry race track conditions. The Active Handling System is disabled when this mode is selected. This mode will require more driver skill than modes 1–3. Adjust your driving accordingly. See “Performance Traction Management (PTM) (ZL1 Only)” and “Launch Control (V8 with Manual Transmission Only)” under Competitive Driving Mode on page 9-44.
5-42 Instruments and Controls

PERF TRACTION 5 – RACE
ACTIVE HANDLING OFF
SUSPENSION MODE TRACK
(ZL1 Only)

This message displays when this Performance Traction Management mode is selected. The instrument panel cluster light will also be on when this mode is selected. Once this message is acknowledged, PTM5 – RACE ESC = OFF displays on the bottom of the digital speed page. Launch Control is available when this mode is selected. In this mode, the Traction Control is available but intended for use on dry race track conditions. The Active Handling System is disabled when this mode is selected. This mode will require more driver skill than modes 1–4. Adjust your driving accordingly. See “Performance Traction Management (PTM) (ZL1 Only)” and “Launch Control (V8 with Manual Transmission Only)” under Competitive Driving Mode on page 9-44.

SERVICE STABILITRAK

This message displays if there is a problem with the StabiliTrak® system. If this message appears, try to reset the system. Stop; turn off the engine and remove the key from the ignition; open and close the driver door and wait for at least one minute. During this time you should notice the lights on the cluster turn off. After a minute has passed, start the engine again. If this message still comes on, it means there is a problem. See your dealer for service. The vehicle is safe to drive; however, you do not have the benefit of StabiliTrak, so reduce your speed and drive accordingly.

SERVICE SUSPENSION SYSTEM (ZL1 Only)

This message displays when the Selective Ride Control system has detected a malfunction and the vehicle speed will be limited. The system must be serviced. See your dealer. See Selective Ride Control on page 9-49 and “SPEED LIMITED TO XXX (ZL1 Only)” under Vehicle Speed Messages on page 5-45.

SERVICE TRACTION CONTROL

This message displays when there is a problem with the Traction Control System (TCS). When this message is displayed, the system will not limit wheel spin. Adjust your driving accordingly. See your dealer for service.
STABILITRAK COMPETITIVE MODE (LS3 and L99 Only)
This message displays when Competitive Mode is selected. See “Competitive Driving Mode (Non ZL1)” under Competitive Driving Mode on page 9-44.

TRACTION CONTROL OFF
This message displays when the traction control system has been disabled. See Traction Control System (TCS) on page 9-41.

Airbag System Messages

SERVICE AIRBAG
This message displays if there is a problem with the airbag system. Take the vehicle to your dealer for service.

Anti-theft Alarm System Messages

THEFT ATTEMPTED
This message displays if the vehicle detects a tamper condition.

Service Vehicle Messages

SERVICE AC SYSTEM
This message is displayed if there is a problem with the air conditioning system. Take the vehicle to your dealer for service.

SERVICE POWER STEERING
This message is displayed if there is a problem with the power steering system. Take the vehicle to your dealer for service.

SERVICE VEHICLE SOON
This message is displayed if there is a problem with the vehicle. Take the vehicle to your dealer for service.

Tire Messages

CHECK XXX TIRE PRESSURE or TIRE PRESSURE LOW ADD AIR TO TIRE
This message displays if the vehicle detects low pressure in one or more tires.

This message also displays LEFT FRONT, RIGHT FRONT, LEFT REAR, or RIGHT REAR to indicate the location of the low tire.

The low tire pressure warning light will also come on. See Tire Pressure Light on page 5-24.

If a tire pressure message appears on the DIC, stop as soon as you can. Inflate the tires by adding air until the tire pressure is equal to the values shown on the Tire and Loading Information label. See Tires on page 10-54, Vehicle Load Limits on page 9-14, and Tire Pressure on page 10-62.
5-44 Instruments and Controls

The DIC also shows the tire pressure values. See Driver Information Center (DIC) on page 5-26.

SERVICE TIRE MONITOR SYSTEM
This message displays if there is a problem with the Tire Pressure Monitor System (TPMS). See Tire Pressure Monitor Operation on page 10-65.

TIRE LEARNING ACTIVE
This message displays when the system is learning new tires. See Tire Pressure Monitor Operation on page 10-65.

TIRE PRESSURE SYSTEM RESET
This message displays when resetting the TPMS. See Tire Pressure Monitor Operation on page 10-65.

Transmission Messages

1 – 4 SHIFT
This message displays when you can only shift from 1 (First) to 4 (Fourth) instead of 1 (First) to 2 (Second). See Manual Transmission on page 9-37.

PRESS CLUTCH TO START
This message displays when attempting to start a vehicle with a manual transmission without pressing on the clutch pedal.

SERVICE TRANSMISSION
This message displays if there is a problem with the transmission. See your dealer.

SHIFT DENIED
This message displays when attempting to use the automatic transmission manual mode to shift to too low of a gear. See Manual Mode on page 9-34.

SHIFT TO PARK
This message displays when the transmission needs to be shifted to P (Park). This may appear when attempting to remove the key from the ignition if the vehicle is not in P (Park).

TRANSMISSION HOT – IDLE ENGINE
This message displays and a chime sounds if the transmission fluid in the vehicle gets hot. Driving with the transmission fluid temperature high can cause damage to the vehicle. Stop the vehicle and let it idle to allow the transmission to cool. This message clears when the fluid temperature reaches a safe level.
Vehicle Reminder Messages

ICE POSSIBLE DRIVE WITH CARE
This message is displayed when ice conditions are possible.

TURN WIPER CONTROL TO INTERMITTENT FIRST
This message is displayed when attempting to adjust the intermittent wiper speed without intermittent selected on the wiper control. See Windshield Wiper/Washer on page 5-3.

Vehicle Speed Messages

DRIVER SELECTED SPEED LIMIT EXCEEDED
This message is displayed when the vehicle speed is greater than the set speed. See “Speed Warning” under Driver Information Center (DIC) on page 5-26.

SPEED LIMITED TO XXX (ZL1 Only)
This message displays when a malfunction is present in the Selective Ride Control system. The vehicle speed will be limited to a value determined by the vehicle when the shock absorber system has failed and the shocks are in their full soft mode. Have the vehicle serviced by your dealer as soon as possible.

Window Messages

OPEN, THEN CLOSE DRIVER WINDOW
This message is displayed when the window needs to be reprogrammed. If the vehicle’s battery has been recharged or disconnected, you will need to reprogram each front window for the express-up feature to work. See Power Windows on page 2-15.

OPEN, THEN CLOSE PASSENGER WINDOW
This message is displayed when the window needs to be reprogrammed. If the vehicle’s battery has been recharged or disconnected, you will need to reprogram each front window for the express-up feature to work. See Power Windows on page 2-15.
5-46 Instruments and Controls

Vehicle Personalization

The audio system controls are used to access the personalization menus for customizing vehicle features.

CONFIG (Configuration): Press to access the Configuration Settings Menu.

MENU/SELECT Knob: Press the center of this knob to enter the menus and select menu items. Turn the knob to scroll through the menus.

BACK: Press to exit or move backward in a menu.

Entering the Personalization Menus

1. Press the CONFIG button to access the Configuration Settings menu.
2. Turn the MENU/SELECT knob to highlight Vehicle Settings.
3. Press the center of the MENU/SELECT knob to select the Vehicle Settings menu.

Climate and Air Quality

Select the Climate and Air Quality menu and the following will be displayed:

- Remote Start Heated Seats

Remote Start Heated Seats

When on, this feature will turn the heated seats on when using remote start on cold days.

Press the MENU/SELECT knob when Remote Start Heated Seats is highlighted. Turn the knob to select On or Off. Press the knob to confirm and go back to the last menu.

Comfort and Convenience

Select the Comfort and Convenience menu and the following will be displayed:

- Chime Volume
Chime Volume
This allows the selection of the chime volume level.
Press the MENU/SELECT knob when Chime Volume is highlighted. Turn the knob to select Normal or High. Press the knob to confirm and go back to the last menu.

Collision/Detection Systems
Select the Collision/Detection Systems menu and the following will be displayed:
• Park Assist

Park Assist
This allows the Ultrasonic Parking Assist feature to be turned on or off.
Press the MENU/SELECT knob when Park Assist is highlighted. Turn the knob to select On or Off. Press the knob to confirm and go back to the last menu.

Language
Select the Language menu and the following will be displayed:
• English
• French
• Spanish
Turn the MENU/SELECT knob to select the language. Press the knob to confirm and go back to the last menu.

Lighting
Select the Lighting menu and the following will be displayed:
• Exit Lighting
• Vehicle Locator Lights

Exit Lighting
This allows the selection of how long the exterior lamps stay on when leaving the vehicle when it is dark outside.

Press the MENU/SELECT knob when Exit Lighting is highlighted. Turn the knob to select Off, 30 Seconds, 1 Minute, or 2 Minutes. Press the knob to confirm and go back to the last menu.

Vehicle Locator Lights
This allows the vehicle locator lights to be turned on or off.
Press the MENU/SELECT knob when Vehicle Locator Lights is highlighted. Turn the knob to select On or Off. Press the knob to confirm and go back to the last menu.

Power Door Locks
Select Power Door Locks and the following will be displayed:
• Unlocked Door Anti Lock Out
• Auto Door Unlock
• Delayed Door Lock
5-48 Instruments and Controls

**Unlocked Door Anti Lock Out**
When on, this feature will keep the driver door from locking when the door is open. If Off is selected, the Delayed Door Lock menu will be available.

Press the MENU/SELECT knob when Auto Door Unlock is highlighted. Turn the knob to select On or Off. Press the knob to confirm and go back to the last menu.

**Auto Door Unlock**
This allows selection of which of the doors will automatically unlock when the vehicle is shifted into P (Park) (automatic transmission) or when the key is removed from the ignition (manual transmission).

Press the MENU/SELECT knob when Auto Door Unlock is highlighted. Turn the knob to select All Doors, Driver Door, or Off. Press the knob to confirm and go back to the last menu.

**Delayed Door Lock**
When on, this feature will delay the locking of the doors. To override the delay, press the power door lock on the instrument panel.

Press the MENU/SELECT knob when Delayed Door Lock is highlighted. Turn the knob to select On or Off. Press the knob to confirm and go back to the last menu.

**Remote Lock/Unlock**
Select Remote Lock/Unlock and the following may be displayed:
- Unlock Feedback (Lights)
- Locking Feedback
- Door Unlock Options

**Unlock Feedback (Lights)**
When on, the exterior lamps will flash when unlocking the vehicle with the RKE transmitter.

Press the MENU/SELECT knob when Unlock Feedback (Lights) is highlighted. Turn the knob to select Flash Lights or Off. Press the knob to confirm and go back to the last menu.

**Locking Feedback**
This allows selection of what type of feedback is given when unlocking the vehicle with the RKE transmitter.

Press the MENU/SELECT knob when Locking Feedback is highlighted. Turn the knob to select Lights and Horn, Lights Only, Horn Only, or Off. Press the knob to confirm and go back to the last menu.
Door Unlock Options
This allows selection of which doors will unlock when pressing the unlock button on the RKE transmitter.
Press the MENU/SELECT knob when Door Unlock Options is highlighted. Turn the knob to select All Doors or Driver Door Only. Press the knob to confirm and go back to the last menu.

Return to Factory Settings
Select Return to Factory Settings to return all of the vehicle personalization to the default settings. Turn the knob to select Yes or No. Press the knob to confirm and go back to the last menu.

Universal Remote System Programming
If the vehicle has this feature, you will see these buttons with one indicator light below them in the overhead console.
This system provides a way to replace up to three remote control transmitters used to activate devices such as garage door openers, security systems, and home automation devices.
Do not use the Universal Remote system with any garage door opener that does not have the stop and reverse feature. This includes any garage door opener model manufactured before April 1, 1982.
Read the instructions completely before attempting to program the Universal Remote system. Because of the steps involved, it may be helpful to have another person available to assist with programming the Universal Remote system.
Keep the original hand-held transmitter for use in other vehicles as well as for future Universal Remote system programming. It is also recommended that upon the sale of the vehicle, the programmed Universal Remote system buttons be erased for security purposes. See “Erasing Universal Remote System Buttons” later in this section.

5-50 Instruments and Controls

When programming a garage door, park outside of the garage. Park directly in line with and facing the garage door opener motor-head or gate motor-head. Be sure that people and objects are clear of the garage door or gate being programmed.

It is recommended that a new battery be installed in the hand-held transmitter for quicker and more accurate transmission of the radio-frequency signal.

Programming the Universal Remote System

For questions or help programming the Universal Remote system, call 1-800-355-3515 or go to www.homelink.com.

Programming a garage door opener involves time-sensitive actions, so read the entire procedure before starting. Otherwise, the device will time out and the procedure will have to be repeated.

To program up to three devices:

1. Hold the end of the hand-held transmitter about 3 to 8 cm (1 to 3 in) away from the Universal Remote system buttons while keeping the indicator light in view. The hand-held transmitter was supplied by the manufacturer of the garage door opener receiver (motor-head unit).

2. At the same time, press and hold both the hand-held transmitter button and one of the three Universal Remote system buttons to be used to operate the garage door. Do not release the Universal Remote system button or the hand-held transmitter button until the indicator light changes from a slowly to a rapidly flashing light. You now may release both buttons.

Some entry gates and garage door openers may require substitution of Step 2 with the procedure noted in “Gate Operator and Canadian Programming” later in this section.

3. Press and hold for five seconds the newly trained Universal Remote system button (the button selected in Step 2) while observing the indicator light and garage door activation.

• If the indicator light stays on continuously or the garage door starts to move when the Universal Remote system button is pressed and released, then the programming is complete. There is no need to continue programming Steps 4–6.
If the Universal Remote system indicator light blinks rapidly for two seconds, then turns to a constant light and the garage door does not move, continue with programming Steps 4–6. It may be helpful to have another person assist with the remaining Steps 4–6.

**“Learn” or “Smart” Button**

4. After Steps 1–3 have been completed, locate the “Learn” or “Smart” button inside the garage on the garage door opener receiver (motor-head unit). The name and color of the button may vary by manufacturer.

5. Firmly press and release the “Learn” or “Smart” button. After pressing this button, you will have 30 seconds to complete Step 6.

6. Immediately return to the vehicle. Firmly press and hold for two seconds the Universal Remote system button, selected in Step 2 to control the garage door, and then release it. If the garage door does not move or the lamp on the garage door opener receiver (motor-head unit) does not flash, press and hold the same button a second time for two seconds, then release it. Again, if the door does not move or the garage door lamp does not flash, press and hold the same button a third time for two seconds, then release.

The Universal Remote system should now activate the garage door.

To program the remaining two Universal Remote system buttons, begin with Step 1 of “Programming the Universal Remote System.”

**Gate Operator and Canadian Programming**

If you have questions or need help programming the Universal Remote system, call 1-800-355-3515 or go to www.homelink.com.

Canadian radio-frequency laws require transmitter signals to time out or quit after several seconds of transmission. This may not be long enough for the Universal Remote system to pick up the signal during programming. Similarly, some U.S. gate operators are manufactured to time out in the same manner.
If you live in Canada, or you are having difficulty programming a gate operator or garage door opener by using the “Programming the Universal Remote System” procedures, regardless of where you live, replace Step 2 under “Programming the Universal Remote System” with the following:

Continue to press and hold the Universal Remote system button while you press and release every two seconds (cycle) the hand-held transmitter button until the frequency signal has been successfully accepted by the Universal Remote system. The Universal Remote system indicator light will flash slowly at first and then rapidly. Proceed with Step 3 under “Programming the Universal Remote System” to complete.

### Universal Remote System Operation

#### Using the Universal Remote System

Press and hold the appropriate Universal Remote system button for at least half of a second. The indicator light will come on while the signal is being transmitted.

#### Erasing Universal Remote System Buttons

All programmed buttons should be erased when the vehicle is sold or the lease ends.

To erase all programmed buttons on the Universal Remote system device:

1. Press and hold down the two outside buttons until the indicator light begins to flash. This should take about 10 seconds.
2. Release both buttons.

### Reprogramming a Single Universal Remote System Button

To reprogram any of the three Universal Remote system buttons:

1. Press and hold the desired Universal Remote system button. Do not release the button.
2. The indicator light will begin to flash after 20 seconds. Without releasing the button, proceed with Step 1 under “Programming the Universal Remote System.”

If you have questions or need help programming the Universal Remote system, call 1-800-355-3515 or go to www.homelink.com. You may also call the customer assistance phone number under Customer Assistance Offices (U.S. and Canada) on page 13-5 or Customer Assistance Offices (Mexico) on page 13-5.

Exterior Lamp Controls

The exterior lamps control is on the instrument panel, on the outboard side of the steering wheel.

Exterior Lighting

It controls the following systems:
  • Headlamps
  • Sidemarker Lamps
  • Parking Lamps
  • Taillamps
  • License Plate Lamps
  • Instrument Panel Lights
  • Fog Lamps
  • Daytime Running Lamps (DRL)

(Off): Briefly turn to this position to turn the automatic light control off or on again. When released, the control returns to the AUTO position.
**6-2 Lighting**

**AUTO (Automatic):** Turns the headlamps on automatically at normal brightness, together with the following:
- Parking Lamps
- Taillamps
- Sidemarker Lamps
- License Plate Lamps
- Instrument Panel Lights

AUTO also controls the Daytime Running Lamps (DRL). See *Daytime Running Lamps (DRL)* on page 6-3.

**Parking Lamps:** Turns the parking lamps on together with the following:
- Taillamps
- Sidemarker Lamps
- License Plate Lamps
- Instrument Panel Lights

A warning chime sounds if the driver door is opened when the ignition switch is off and the parking lamps are on.

**Headlamps:** Turns the headlamps on together with the lamps listed below.
- Parking Lamps
- Taillamps
- Sidemarker Lamps
- License Plate Lamps
- Instrument Panel Lights

A warning chime sounds if the driver door is opened when the ignition switch is off and the headlamps are on.

**Front Fog Lamps:** Turns the fog lamps on or off. The fog lamps come on together with the following:
- Parking Lamps
- Taillamps
- Sidemarker Lamps

- License Plate Lamps
- Instrument Panel Lights

See *Front Fog Lamps* on page 6-5.

**Headlamp High/Low-Beam Changer**

Push the turn signal/lane change lever away from you and release, to turn the high beams on. To return to low beams, push the lever again or pull it toward you and release.

This indicator light turns on in the instrument panel cluster when the high-beam headlamps are on.
Flash-to-Pass

The flash-to-pass feature works with the low beams or Daytime Running Lamps (DRL) on or off.

To flash the high beams, pull the turn signal/lane change lever all the way toward you, then release it.

Daytime Running Lamps (DRL)

Daytime Running Lamps (DRL) can make it easier for others to see the front of your vehicle during the day. Fully functional Daytime Running Lamps are required on all vehicles first sold in Canada.

A light sensor on top of the instrument panel makes the DRL work, so be sure it is not covered.

The DRL system will make the low-beam headlamps come on at a reduced brightness or for vehicles with High Intensity Discharge (HID) headlamps, the dedicated DRL lights will come on when the following conditions are met:

- The ignition is in the ON/RUN position.
- The exterior lamps control is in AUTO, or has been briefly turned to OFF to turn the automatic light control on again.
- The engine is running.

When the DRL are on, the headlamps, taillamps, sidemarker, instrument panel, and other lamps will not be on.

The headlamps automatically change from DRL to the regular headlamps depending on the darkness of the surroundings. The other lamps that come on with the headlamps will also come on.

When it is bright enough outside, the headlamps will go off and the DRL will come on.

To turn the DRL off or on again, turn the exterior lamps control to the off position and then release. For vehicles first sold in Canada, the DRL cannot be turned off.

The regular headlamp system should be turned on when needed.

Automatic Headlamp System

When it is dark enough outside and the headlamp switch is in AUTO, the automatic headlamp system will turn on the headlamps at the normal brightness along with other lamps such as the taillamps, sidemarker lamps, parking lamps, license plate lamps, and the instrument panel lights. The radio lights will also be dim.
6-4 Lighting

To turn off the automatic headlamp system, turn the exterior lamps switch to the off position and then release. For vehicles first sold in Canada, the transmission must be in the P (Park) position, before the automatic headlamp system can be turned off.

The vehicle has a light sensor located on the top of the instrument panel. Do not cover this sensor or the system will come on whenever the ignition is on.

The system may also turn on the headlamps when driving through a parking garage, heavy overcast weather, or a tunnel. This is normal.

There is a delay in the transition between the daytime and nighttime operation of the Daytime Running Lamps (DRL) and the automatic headlamp systems so that driving under bridges or bright overhead street lights does not affect the system. The DRL and automatic headlamp system will only be affected when the light sensor sees a change in lighting lasting longer than the delay.

If the vehicle is started in a dark garage, the automatic headlamp system comes on immediately. If it is light outside when the vehicle leaves the garage, there will be a slight delay before the automatic headlamp system changes to the DRL. During that delay, the instrument panel cluster may not be as bright as usual. Make sure the instrument panel brightness control is in the full bright position. See Instrument Panel Illumination Control on page 6-6.

Hazard Warning Flashers

⚠️ (Hazard Warning Flasher): Press this button to make the front and rear turn signal lamps flash on and off. This warns others that you are having trouble. Press again to turn the flashers off.
Turn and Lane-Change Signals

An arrow on the instrument panel cluster flashes in the direction of the turn or lane change.

Move the lever all the way up or down to signal a turn.

Raise or lower the lever until the arrow starts to flash to signal a lane change. Hold it there until the lane change is completed. If the lever is briefly pressed and released, the turn signal flashes three times.

The lever returns to its starting position whenever it is released.

If after signaling a turn or lane change the arrow flashes rapidly or does not come on, a signal bulb might be burned out.

Have the bulbs replaced. If the bulb is not burned out, check the fuse. See Electrical System Overload on page 10-47.

Front Fog Lamps

For vehicles with front fog lamps, the button is located on the exterior lamp control, on the outboard side of the steering wheel.

The ignition must be turned to ON/RUN to turn on the fog lamps.

© (Front Fog Lamps): Press to turn the fog lamps on or off. An indicator light on the instrument panel cluster comes on when the fog lamps are on.

The fog lamps come on together with the parking and sidemarker lamps.

If the high-beam headlamps are turned on, the fog lamps will turn off. If the high-beam headlamps are turned off, the fog lamps will turn back on again.

For vehicles with High Intensity Discharge (HID) headlamps, the Daytime Running Lamps (DRL) replace the fog lamps.

Some localities have laws that require the headlamps to be on along with the fog lamps.
6-6 Lighting

Interior Lighting

Instrument Panel Illumination Control

This feature controls the brightness of the instrument panel lights.

Visibility (Instrument Panel Brightness): Move the thumbwheel up or down and hold, to brighten or dim the instrument panel lights.

Dome Lamps

The dome lamp buttons are overhead near the rearview mirror.

To change the settings, press the following:

- ☼ (Off): Turns the lamp off, even when a door is open.
- ☵ (Door): Turns the lamp on automatically when a door is opened.
- ☼ (On): Turns the lamp on.

Lighting Features

Entry Lighting

The lamps inside the vehicle come on when any door is opened. They stay on for about 20 seconds. When all of the doors have been closed or the ignition is turned to ON/RUN, they gradually fade out. They also come on when ☻ is pressed on the Remote Keyless Entry (RKE) system transmitter.

The lamps inside the vehicle stay on for about 20 seconds after the key is removed from the ignition to provide light as you exit.

Theater Dimming

This feature allows for a three to five second fade out of the courtesy lamps instead of having them turn off immediately.
Battery Load Management

The vehicle has Electric Power Management (EPM) that estimates the battery's temperature and state of charge. It then adjusts the voltage for best performance and extended life of the battery.

When the battery's state of charge is low, the voltage is raised slightly to quickly bring the charge back up. When the state of charge is high, the voltage is lowered slightly to prevent overcharging. If the vehicle has a voltmeter gauge or a voltage display on the Driver Information Center (DIC), you may see the voltage move up or down. This is normal. If there is a problem, an alert will be displayed.

The battery can be discharged at idle if the electrical loads are very high. This is true for all vehicles. This is because the generator (alternator) may not be spinning fast enough at idle to produce all of the power needed for very high electrical loads.

A high electrical load occurs when several of the following are on, such as: headlamps, high beams, fog lamps, rear window defogger, climate control fan at high speed, heated seats, engine cooling fans, trailer loads, and loads plugged into accessory power outlets.

EPM works to prevent excessive discharge of the battery. It does this by balancing the generator's output and the vehicle's electrical needs. It can increase engine idle speed to generate more power whenever needed. It can temporarily reduce the power demands of some accessories.

Normally, these actions occur in steps or levels, without being noticeable. In rare cases at the highest levels of corrective action, this action may be noticeable to the driver. If so, a DIC message might be displayed, and it is recommended that the driver reduce the electrical loads as much as possible. See Battery Voltage and Charging Messages on page 5-35.

Battery Power Protection

This feature shuts off the dome lamp if it is left on for more than 10 minutes when the ignition is in LOCK/OFF. This helps to prevent the battery from running down.

Infotainment

Read the following pages to become familiar with the infotainment system features.

⚠️ WARNING

Taking your eyes off the road for extended periods could cause a crash resulting in injury or death to you or others. Do not give extended attention to infotainment tasks while driving.

This system provides access to many audio and non-audio listings.
7-2  Infotainment System

To minimize taking your eyes off the road while driving, do the following while the vehicle is parked:

- Become familiar with the operation and controls of the audio system.
- Set up the tone, speaker adjustments, and preset radio stations.

See Defensive Driving on page 9-3.

Notice: Contact your dealer before adding any equipment.

Adding audio or communication equipment could interfere with the operation of the engine, radio, or other systems, and could damage them. Follow federal rules covering mobile radio and telephone equipment.

The theft-deterrent feature works by learning a portion of the Vehicle Identification Number (VIN) to the infotainment system. The infotainment system does not operate if it is stolen or moved to a different vehicle.

The vehicle has Retained Accessory Power (RAP). With RAP, the infotainment system can play even after the ignition is turned off. See Retained Accessory Power (RAP) on page 9-25.

2. Press the MENU/SELECT knob to confirm the setting.

Turning a Function On or Off

1. Turn the MENU/SELECT knob to highlight the function.
2. Press the MENU/SELECT knob to turn the function on or off.

Entering a Character Sequence

1. Turn the MENU/SELECT knob to highlight the character.
2. Press the MENU/SELECT knob to select the character.

Press the BACK button to delete the last character or press and hold BACK to delete the entire character sequence.

Audio Settings

The audio settings can be set for each radio band and each audio player source.

To adjust the audio setting, press the TONE button and select the audio setting. Press the BACK button to go back to the Tone Settings menu.

To quickly reset an audio setting value to 0:

1. Highlight the option.
2. Press and hold the MENU/SELECT knob until the value changes to 0.
Adjusting the Treble, Midrange, and Bass

1. Select Treble, Midrange, or Bass.
2. Select the value.

Adjusting the Fader and Balance

1. Select Fader or Balance.
2. Select the value.

Adjusting the EQ (Equalizer)

Radio

AM-FM Radio

Control Buttons
The buttons used to control the radio are:

RADIO/BAND: Press to turn the radio on and choose between AM, FM, and XM™, if equipped.
SEEK ∫ or SEEK ₋: Press to search for stations.
FAV: Press to open the favorites list.
1–6: Press to select preset stations.
MENU/SELECT: Turn to manually search for stations.

RDS (Radio Data System)
The radio may have RDS. The RDS feature is available for use only on FM stations that broadcast RDS information. This feature only works when the information from the radio station is available. In rare cases, a radio station could broadcast incorrect information that causes the radio features to work improperly. If this happens, contact the radio station.

While the radio is tuned to an FM-RDS station, the station name or call letters display.

Radio Menus
Radio menus are available for AM, FM, and XM, if equipped.

Press the MENU/SELECT knob to open the main radio menu for that frequency.

Maximum Startup Volume
The maximum volume played when the radio is first turned on can be set.

1. Press the CONFIG button.
2. Select Radio Settings.
3. Select Maximum Startup Volume.
4. Select the setting.
5. Press the BACK / button to go back to the System Configuration menu.
Selecting a Band
Press the RADIO/BAND button to choose AM, FM, or XM, if equipped. The last station that was playing starts playing again.

Selecting a Station

Seek Tuning
Briefly press SEEK ‹ or SEEK › to automatically search for the next available station. If a station is not found, the radio switches to a more sensitive search level. If a station still is not found, the frequency that was last active begins to play.

Press and hold SEEK ‹ or SEEK › until the station on the display is reached, then release the button.

Manual Tuning
Turn the MENU/SELECT knob to select the frequency on the display.

Favorites List
1. Press the MENU/SELECT knob.
2. Select Favorites List.
3. Select the station.

Station Lists
1. Press the MENU/SELECT knob.
2. Select AM or FM Station List. All receivable stations in the current reception area are displayed. If no station list has been created, an automatic station search is done.
3. Select the station.

Updating Station and Category Lists
If stations stored in the station list can no longer be received:
1. Press the MENU/SELECT knob.
2. Select Update AM or FM Station List, if the stations stored in the station list are no longer received. A station search will be completed and the first station in the updated list will play.

To cancel the station search, press the MENU/SELECT knob.

Category Lists
Most stations that broadcast an RDS program type (PTY) code specify the type of programming transmitted. Some stations change the PTY code depending on the content. The system stores the RDS stations, sorted by program type, in the FM category list.
7-10 Infotainment System

To search for a programming type determined by station:

1. Select FM category list. A list of all programming types available displays.
2. Select the programming type. A list of stations that transmit programming of the selected type displays.
3. Select the station. The category lists are updated when the corresponding station lists are updated.

Storing a Station as a Favorite

To store the station to a position in the list, press the corresponding numeric button 1–6 until the station can be heard again.

Retrieving Stations

Press the FAV button to open a favorite page or to switch to another favorite page. Briefly press one of the 1–6 buttons to retrieve the station.

Satellite Radio

Vehicles with an XM Satellite Radio tuner and a valid XM Satellite Radio subscription can receive XM programming.

XM Satellite Radio Service

XM is a satellite radio service based in the 48 contiguous United States and 10 Canadian provinces. XM Satellite Radio has a wide variety of programming and commercial-free music, coast to coast, and in digital-quality sound.

During your trial or when you subscribe, you will get unlimited access to XM Radio Online for when you are not in the vehicle. A service fee is required to receive the XM service. If XM service needs to be reactivated, the radio will display "No Subscription Please Renew" on channel XM1.

For more information, contact XM at www.xmradio.com or 1-800-929-2100 in the U.S., and www.xmradio.ca or 1-877-438-9677 in Canada.

Control Buttons

The buttons used to control the XM radio are:

RADIO/BAND: Press to turn the radio on and choose between AM, FM, and XM.

SEEK or SEEK: Press to search for stations.

Storing and Retrieving Favorites

Stations from all bands can be stored in the favorite lists in any order.

Up to six stations can be stored in each favorite page and the number of available favorite pages can be set.

Radio Reception

Frequency interference and static can occur during normal radio reception if items such as cell phone chargers, vehicle convenience accessories, and external electronic devices are plugged into the accessory power outlet. If there is interference or static, unplug the item from the accessory power outlet.

FM

FM signals only reach about 16 to 65 km (10 to 40 mi). Although the radio has a built-in electronic circuit that automatically works to reduce interference, some static can occur, especially around tall buildings or hills, causing the sound to fade in and out.

AM

The range for most AM stations is greater than for FM, especially at night. The longer range can cause station frequencies to interfere with each other. For better radio reception, most AM radio stations boost the power levels during the day, and then reduce these levels during the night. Static can also occur when things like storms and power lines interfere with radio reception. When this happens, try reducing the treble on the radio.

XM™ Satellite Radio Service

XM Satellite Radio Service gives digital radio reception from coast to coast in the 48 contiguous United States, and in Canada. Just as with FM, tall buildings or hills can interfere with satellite radio signals, causing the sound to fade in and out. In addition, traveling or standing under heavy foliage, bridges, garages, or tunnels may cause loss of the XM signal for a period of time.

Cellular Phone Usage

Cellular phone usage may cause interference with the vehicle's radio. This interference may occur when making or receiving phone calls, charging the phone's battery, or simply having the phone on. This interference can cause an increased level of static while listening to the radio. If static is received while listening to the radio, unplug the cellular phone and turn it off.
7-14 Infotainment System

Fixed Mast Antenna

The fixed mast antenna can withstand most car washes without being damaged as long as it is securely attached to the base. If the mast becomes slightly bent, straighten it out by hand. If the mast is badly bent, replace it.

Occasionally check to make sure the antenna is tightened to its base. If tightening is required, tighten by hand until fully seated plus one quarter turn.

Backglass Antenna

The AM-FM antenna is integrated with the rear window defogger, located in the rear window. Make sure that the inside surface of the rear window is not scratched and that the lines on the glass are not damaged. If the inside surface is damaged, it could interfere with radio reception. For proper radio reception, the antenna connector needs to be properly attached to the post on the glass.

If a cellular telephone antenna needs to be attached to the glass, make sure that the grid lines for the AM-FM antenna are not damaged. There is enough space between the grid lines to attach a cellular telephone antenna without interfering with radio reception.

Notice: Using a razor blade or sharp object to clear the inside rear window can damage the rear window antenna and/or the rear window defogger. Repairs would not be covered by the vehicle warranty. Do not clear the inside rear window with sharp objects.

Notice: Do not apply aftermarket glass tinting with metallic film. The metallic film in some tinting materials will interfere with or distort the incoming radio reception. Any damage caused to your backglass antenna due to metallic tinting materials will not be covered by the vehicle warranty.

Diversity Antenna System

For vehicles with convertible tops, the AM-FM antenna is a hidden self-tuning system and is located in the rear spoiler. It optimizes the AM and FM signals relative to the vehicle's position and radio station source. No maintenance or adjustments are needed. Do not place loads on the spoiler. If the spoiler is replaced, be sure it is replaced with the correct GM parts for the best AM and FM reception.

Satellite Radio Antenna

For vehicles with XM Satellite Radio Service, the antenna is located on the decklid of the vehicle. Keep the antenna clear of obstructions for clear radio reception.
Audio Players

CD Player

The CD player can play audio CDs and MP3 CDs.

The CD player will not play 8 cm (3 in) CDs.

Care of CDs

Sound quality can be reduced due to disc quality, recording method, quality of the music recorded, and how the disc has been handled. Handle discs carefully and store them in their original cases or other protective cases away from direct sunlight and dust. If the bottom surface of a disc is damaged, the disc may not play properly or at all. Do not touch the bottom surface of a disc while handling it; this could damage the surface. Pick up discs by grasping the outer edges or the edge of the hole and the outer edge.

If the bottom surface of a disc is dirty, take a soft lint-free cloth, or dampen a clean soft cloth in a mild neutral detergent solution mixed with water, and clean it. Wipe the disc from the center to the outer edge.

Care of the CD Player

Do not add a label to a disc, as it could get caught in the CD player. If a label is needed, label the top of the recorded disc with a marking pen.

Do not use disc lens cleaners because they could contaminate the lens of the disc optics and damage the CD player.

Notice: If a label is added to a CD, more than one CD is inserted into the slot at a time, or an attempt is made to play scratched or damaged CDs, the CD player could be damaged. While using the CD player, use only CDs in good condition without any label, load one CD at a time, and keep the CD player and the loading slot free of foreign materials, liquids, and debris.

Control Buttons

The buttons used to control the CD player are:

CD/AUX: Press to choose between the CD and AUX player.

SEEK or SEEK : Press to select tracks or to fast forward or rewind within a track.
7-16 Infotainment System

MENU/SELECT: Turn to select tracks.
INFO: Press to display additional information about the CD that may be available.
(Eject): Press to remove the CD.

Inserting a CD
With the printed side facing up, insert a disc into the CD slot until it is drawn in.

Removing a CD
Press Eject. The disc is pushed out of the CD slot.
If the disc is not removed after it is ejected, it is pulled back in after a few seconds.

Playing a CD or MP3 CD
Press the CD/AUX button if there is a disc in the player; it begins playing.
Information about the disc and current track is shown on the display depending on the data stored.

Selecting a CD Track
Using the control buttons:
Press SEEK or SEEK to select the previous or next track.
Turn the MENU/SELECT knob counterclockwise or clockwise to select the previous or next track.
Using the CD Menu:
1. Press the MENU/SELECT knob.
2. Select Tracks list.
3. Select the track.

Playing Tracks in Random Order
Press the MENU/SELECT knob and then set Shuffle Songs to On.

Fast Forward and Rewind
Press and hold SEEK or SEEK to fast forward or rewind within the current track.

Selecting an MP3 Track
Using the control buttons:
Press SEEK or SEEK to select the previous or next track.
Turn the MENU/SELECT knob counterclockwise or clockwise to select the previous or next track.
Using the CD Menu:
1. Press the MENU/SELECT knob.
2. Select Playlists/Folders.
3. Select the playlist or folder.
4. Select the track.
Searching for MP3 Tracks

It is normal for the search feature to take some time to display the information after reading the disc due to the amount of information stored on the disc. The infotainment system automatically switches to FM while the disc is being read.

Tracks can be searched by:
- Playlists
- Artists
- Albums
- Song Titles
- Genres
- Folder View

To search for tracks:
1. Press the MENU/SELECT knob.
2. Select Search.

4. Select the track.

Auxiliary Devices

The AUX Input allows portable devices to connect to the vehicle using the 3.5 mm (1/8 in) input jack, the USB port, if equipped, or Bluetooth® wireless technology, if equipped.

Portable devices are controlled by using the menu system described in Operation on page 7-4.

3.5 mm Jack

Connect a 3.5 mm (1/8 in) cable to the auxiliary input jack to use a portable audio player.

Playback of an audio device that is connected to the 3.5 mm jack can only be controlled using the controls on the device.

Adjusting the Volume

Turn the VOL/ knob to adjust the volume of the infotainment system after the volume level has been set on the portable audio device.

USB Port

For vehicles with a USB port, the following devices may be connected and controlled by the infotainment system.
- iPods
- PlaysForSure Devices (PFD)
- USB Drives
- Zunes

Connecting a Bluetooth® Device
Before a Bluetooth device can be connected to the infotainment system, it must first be paired to the system. Not all Bluetooth devices can be paired to the infotainment system. Before pairing the Bluetooth device, become familiar with its user guide for Bluetooth functions. The system only connects to Bluetooth devices that support A2DP (Advanced Audio Distribution Profile) version 1.2.

**Pairing Information:**
- Up to five devices can be paired to the system.
- The pairing process is disabled when the vehicle is moving.
- The infotainment system automatically links with the first available paired device in the order the device was paired.
- Only one paired device can be connected to the infotainment system at a time.
- Pairing should only need to be completed once, unless changes to the pairing information have been made or the device is deleted.

Bluetooth Setup Menu
The Bluetooth Setup menu can be accessed with or without a device attached to the USB port.

To select the Bluetooth Setup menu when a device is attached to the USB port and active:
1. Press the MENU/SELECT knob while in the iPod, Zune, PFD, or USB device main menu.
2. Select Bluetooth Music Setup.
To select the Bluetooth Music Setup menu when a device is not attached to the USB port, or when a device is attached to the USB port but not active:

1. Press the CD/AUX button until AUX is the active source.
2. Press the MENU/SELECT knob.

To select the Bluetooth Music Setup menu when a Bluetooth device is connected and active:

1. Press the MENU/SELECT knob.
2. Select Bluetooth Music Setup.

**Pairing a Device**

1. Select Connect To New Device from the Bluetooth Music Setup menu.
2. The system asks a series of Yes/No questions to determine what type of device is being paired.

3. After the system determines what type of Bluetooth device is being paired, the Bluetooth device will need to be put into discovery mode.

4. Some devices may require a personal identification number (PIN) in order to complete the pairing process. Locate the device named “GMusicConnect” in the list on the Bluetooth device and follow the instructions on the device to enter the four-digit PIN provided by the infotainment system.

**Connecting to a Device**

Once a device is paired to the infotainment system, it can be connected to the infotainment system.

To connect a paired device when no other device is connected to the infotainment system:

1. Select the Select Device option from the Bluetooth Music Setup menu.
2. Select the new device.

To connect a paired device when another device is connected to the infotainment system:

1. Select the Select Device option from the Bluetooth Music Setup menu.
2. Select the new device.
3. The active device is disconnected from the system and the new device is connected.

**7-22 Infotainment System**

### Removing a Device

1. Select Remove Device from the Bluetooth Music Setup menu.
2. Select the device.
3. The device is removed from the system.

Before connecting to the removed device again, it will need to paired to the infotainment system.

### Changing the PIN

To change the default PIN:

1. Select Change Default PIN from the Bluetooth Music Setup menu.
2. Select a pre-defined PIN, or select Other to create a PIN.

To create a PIN:

1. Select the length of the PIN.
2. Enter the character sequence.

### Messages

The following messages may appear on the infotainment screen.

**Poor Bluetooth Signal Quality:** This message displays when the Bluetooth signal strength is low.

**This Feature is Unavailable While Vehicle is Moving:** This message displays when an action is not allowed while the vehicle is moving.

### Controlling a Bluetooth® Device

Bluetooth devices that support AVRCP (Audio/Video Remote Control Profile) version 1.4 may be able to be controlled by the infotainment system.

Press and release SEEK ⬇️ or SEEK ⬆️ to skip tracks. Press and hold SEEK ⬇️ or SEEK ⬆️ to fast forward or fast reverse within a track.

Phone

Bluetooth (Overview)

For vehicles equipped with Bluetooth capability, the system can interact with many cell phones, allowing:

- Placement and receipt of calls in a hands-free mode.
- Sharing of the cell phone’s address book or contact list with the vehicle.

To minimize driver distraction, before driving, and with the vehicle parked:

- Become familiar with the features of the cell phone. Organize the phone book and contact lists clearly and delete duplicate or rarely used entries. If possible, program speed dial or other shortcuts.
- Review the controls and operation of the infotainment system.
- Pair cell phone(s) to the vehicle. The system may not work with all cell phones. See “Pairing” in this section.
- If the cell phone has voice dialing capability, learn to use that feature to access the address book or contact list. See “Voice Pass-Thru” in this section.
- See “Storing and Deleting Phone Numbers” in this section.

**WARNING**

When using a cell phone, it can be distracting to look too long or too often at the screen of the phone or the infotainment (navigation) system. Taking your eyes off the road too long or too often could cause a crash resulting in injury or death. Focus your attention on driving.

Vehicles with a Bluetooth system can use a Bluetooth-capable cell phone with a Hands-Free Profile to make and receive phone calls. The infotainment system and voice recognition are used to control the system. The system can be used while in ON/RUN or ACC/ACCESSORY. The range of the Bluetooth system can be up to 9.1 m (30 ft). Not all phones support all functions and not all phones work with the Bluetooth system.
7-24 Infotainment System

See www.gm.com/bluetooth for more information about compatible phones.

Bluetooth Controls
Use the buttons located on the infotainment system and the steering wheel to operate the Bluetooth system.

Steering Wheel Controls
Press to Talk: Press to answer incoming calls, confirm system information, and start voice recognition.

Mute/End Call: Press to end a call, reject a call, or cancel an operation.

Infotainment System Controls
If equipped, the infotainment system allows certain controls to be selected on the infotainment display.

For information about how to navigate the menu system using the infotainment controls, see Operation on page 7-4.

PHONE: Press to enter the Phone main menu.

Voice Recognition
The voice recognition system uses commands to control the system and dial phone numbers.

Noise: The system may not recognize voice commands if there is too much background noise.

When to Speak: A tone sounds to indicate that the system is ready for a voice command. Wait for the tone and then speak.

How to Speak: Speak clearly in a calm and natural voice.

Audio System
When using the Bluetooth system, sound comes through the vehicle's front audio system speakers and overrides the audio system. Use the VOL/ knob during a call to change the volume level. The adjusted volume level remains in memory for later calls. The system maintains a minimum volume level.

Bluetooth (Infotainment Controls)

For information about how to navigate the menu system using the infotainment controls, see Operation on page 7-4.

Pairing

A Bluetooth-enabled cell phone must be paired to the Bluetooth system and then connected to the vehicle before it can be used. See your cell phone manufacturer’s user guide for Bluetooth functions before pairing the cell phone. If a Bluetooth phone is not connected, calls will be made using OnStar Hands-Free Calling, if available. See OnStar Overview on page 14-1.

Pairing Information

- A Bluetooth phone with MP3 capability cannot be paired to the vehicle as a phone and an MP3 player at the same time.
- Up to five cell phones can be paired to the Bluetooth system.
- The pairing process is disabled when the vehicle is moving.
- Pairing only needs to be completed once, unless the pairing information on the cell phone changes or the cell phone is deleted from the system.
- Only one paired cell phone can be connected to the Bluetooth system at a time.
- If multiple paired cell phones are within range of the system, the system connects to the first available paired cell phone in the order that they were first paired to the system. To link to a different paired phone, see “Linking to a Different Phone” later in this section.

Pairing a Phone

1. Press the CONFIG button.
2. Select Phone Settings or Bluetooth Settings.
3. Select Bluetooth.
4. Select Pair Device (Phone). A four-digit Personal Identification Number (PIN) appears on the display. The PIN is used in Step 6.
5. Start the pairing process on the cell phone to be paired to the vehicle. See the cell phone manufacturer’s user guide for information on this process.
6. Locate the device named “Your Vehicle” in the list on the cell phone. Follow the instructions on the cell phone to enter the PIN provided in Step 4. After the PIN is successfully entered, the system prompts you to provide a name for the paired cell phone. This name will be used to indicate which phones are paired and connected to the vehicle. The system responds with “<Phone name> has been successfully paired” after the pairing process is complete.
7. Repeat Steps 1–6 to pair additional phones.
7-26 Infotainment System

Listing All Paired and Connected Phones
1. Press the CONFIG button.
2. Select Phone Settings or Bluetooth Settings.
3. Select Bluetooth.
4. Select Device List.

Deleting a Paired Phone
1. Press the CONFIG button.
2. Select Phone Settings or Bluetooth Settings.
3. Select Bluetooth.
4. Select Device List.
5. Select the phone to delete and follow the on screen prompts.

Linking to a Different Phone
To link to a different phone, the new phone must be in the vehicle and available to be connected to the Bluetooth system before the process is started.
1. Press the CONFIG button.
2. Select Phone Settings or Bluetooth Settings.
3. Select Bluetooth.
4. Select Device List.
5. Select the new phone to link to and follow the on screen prompts.
   If delete is selected, the highlighted phone will be deleted.

Making a Call Using Phone Book
For cell phones that support the phone book feature, the Bluetooth system can use the contacts stored on your cell phone to make calls. See your cell phone manufacturer’s user guide or contact your wireless provider to find out if this feature is supported by your phone.

When a cell phone supports the phone book feature, the Phone Book and Call Lists menus are automatically available.

The Phone Book menu allows you to access the phone book stored in the cell phone to make a call.

The Call Lists menu allows you to access the phone numbers from the Incoming Calls, Outgoing Calls, and Missed Calls menus on your cell phone to make a call.
To make a call using the Phone Book menu:
1. Press the PHONE button once or twice.
2. Select Phone Book.
3. Search through the list by selecting the letter group the phone book entry begins with, or press the MENU/SELECT knob to scroll through the entire list of names/numbers in the phone book.
4. Select the name or number you want to call.

To make a call using the Call Lists menu:
1. Press the PHONE button once or twice.
2. Select Call Lists.
3. Select the Incoming Calls, Outgoing Calls, or Missed Calls list.
4. Select the name or number you want to call.

Making a Call
To make a call:
1. Press the PHONE button once or twice.
2. Enter the character sequence. See “Entering a Character Sequence” in Operation on page 7-4.
3. Select Call to start dialing the number.

Accepting or Declining a Call
When an incoming call is received, the infotainment system mutes and a ring tone is heard in the vehicle.

Accepting a Call
Turn the MENU/SELECT knob to “Answer” and press the MENU/SELECT knob to accept the call.

Declining a Call
Turn the MENU/SELECT knob to “Decline” and press the MENU/SELECT knob to decline the call.

Switching Between Calls (Call Waiting Calls Only)
To switch between calls:
1. Turn or press the MENU/SELECT knob.
2. Select Switch Call from the menu.

Call Waiting
Call waiting must be supported on the Bluetooth phone and enabled by the wireless service carrier to work.

Accepting a Call
Turn the MENU/SELECT knob to “Answer” and press the MENU/SELECT knob to accept the call.

Declining a Call
Turn the MENU/SELECT knob to “Decline” and press the MENU/SELECT knob to decline the call.
7-28 Infotainment System

Conference Calling
Conference calling and three-way calling must be supported on the Bluetooth phone and enabled by the wireless service carrier to work.

To start a conference while in a current call:
1. Turn or press the MENU/SELECT knob.
2. Select Enter Number.
3. Enter the character sequence then select Call. See “Entering a Character Sequence” in Operation on page 7-4.
4. After the call has been placed, turn or press the MENU/SELECT knob and choose Merge Calls.
5. To add more callers to the conference call, repeat Steps 1–4. The number of callers that can be added is limited by your wireless service carrier.

Ending a Call
Turn or press the MENU/SELECT knob and select Hang Up.

Muting a Call
To Mute a Call
Turn or press the MENU/SELECT knob and select Mute Call.

To Cancel Mute
Turn or press the MENU/SELECT knob and select Mute Call.

Dual Tone Multi-Frequency (DTMF) Tones
The in-vehicle Bluetooth system can send numbers during a call. This is used when calling a menu-driven phone system.
1. Turn or press the MENU/SELECT knob and select Enter Number.
2. Enter the character sequence. See “Entering a Character Sequence” in Operation on page 7-4.

Bluetooth (Voice Recognition)

Using Voice Recognition
To use voice recognition, press the button located on the steering wheel. Use the commands below for the various voice features. For additional information, say “Help” while you are in a voice recognition menu.

Pairing
A Bluetooth-enabled cell phone must be paired to the Bluetooth system and then connected to the vehicle before it can be used. See your cell phone manufacturer's user guide for Bluetooth functions before pairing the cell phone. If a Bluetooth phone is not connected, calls will be made using OnStar Hands-Free Calling, if available. See OnStar Overview on page 14-1.
Pairing Information

- A Bluetooth phone with MP3 capability cannot be paired to the vehicle as a phone and an MP3 player at the same time.
- Up to five cell phones can be paired to the Bluetooth system.
- The pairing process is disabled when the vehicle is moving.
- Pairing only needs to be completed once, unless the pairing information on the cell phone changes or the cell phone is deleted from the system.
- Only one paired cell phone can be connected to the Bluetooth system at a time.
- If multiple paired cell phones are within range of the system, the system connects to the first available paired cell phone in the order that they were first paired to the system. To link to a different paired phone, see “Linking to a Different Phone” later in this section.

Pairing a Phone

1. Press $\mathbb{C}$ / $\mathbb{W}$. The system responds “Ready,” followed by a tone.
2. Say “Bluetooth.” This command can be skipped.
3. Say “Pair.” The system responds with instructions and a four-digit Personal Identification Number (PIN). The PIN is used in Step 5.
4. Start the pairing process on the cell phone that you want to pair. For help with this process, see your cell phone manufacturer’s user guide.
5. Locate the device named “Your Vehicle” in the list on the cell phone. Follow the instructions on the cell phone to enter the PIN provided in Step 3. After the PIN is successfully entered, the system prompts you to provide a name for the paired cell phone.
6. Repeat Steps 1–5 to pair additional phones.

Listing All Paired and Connected Phones

The system can list all cell phones paired to it. If a paired cell phone is also connected to the vehicle, the system responds with “is connected” after that phone name.

1. Press $\mathbb{C}$ / $\mathbb{W}$. The system responds “Ready,” followed by a tone.
2. Say “Bluetooth.”
3. Say “List.”
7-30 Infotainment System

Deleting a Paired Phone
If the phone name you want to delete is unknown, see “Listing All Paired and Connected Phones.”

1. Press \( \text{\textcopyright} / \text{\textregistered} \). The system responds “Ready,” followed by a tone.
2. Say “Bluetooth.”
3. Say “Delete.” The system asks for which phone to delete.
4. Say the name of the phone you want to delete.

Connecting to a Different Phone
To connect to a different cell phone, the Bluetooth system looks for the next available cell phone in the order in which all the available cell phones were paired. Depending on which cell phone you want to connect to, you may have to use this command several times.

1. Press \( \text{\textcopyright} / \text{\textregistered} \). The system responds “Ready,” followed by a tone.
2. Press \( \text{\textregistered} \).
3. Say “Bluetooth.”
4. Say “Change phone.”

If another cell phone is found, the response will be “<Phone name> is now connected.”

If another cell phone is not found, the original phone remains connected.

Storing and Deleting Phone Numbers
The system can store up to 30 phone numbers as name tags in the Hands-Free Directory that is shared between the Bluetooth and OnStar systems.

The following commands are used to delete and store phone numbers.

**Store:** This command will store a phone number, or a group of numbers as a name tag.

**Digit Store:** This command allows a phone number to be stored as a name tag by entering the digits one at a time.

**Delete:** This command is used to delete individual name tags.

**Delete All Name Tags:** This command deletes all stored name tags in the Hands-Free Calling Directory and the Destinations Directory.

Using the “Store” Command
1. Press \( \text{\textcopyright} / \text{\textregistered} \). The system responds “Ready,” followed by a tone.
2. Say “Store.”
3. Say the phone number or group of numbers you want to store all at once with no pauses, then follow the directions given by the system to save a name tag for this number.
Using the “Digit Store” Command

If an unwanted number is recognized by the system, say “Clear” at any time to clear the last number.

To hear all of the numbers recognized by the system, say “Verify” at any time.

1. Press \( \text{g} \). The system responds “Ready,” followed by a tone.
2. Say “Digit Store.”
3. Say each digit, one at a time, that you want to store. After each digit is entered, the system repeats back the digit it heard followed by a tone. After the last digit has been entered, say “Store,” and then follow the directions given by the system to save a name tag for this number.

Using the “Delete” Command

1. Press \( \text{g} \). The system responds “Ready,” followed by a tone.
2. Say “Delete.”
3. Say the name tag you want to delete.

Using the “Delete All Name Tags” Command

This command deletes all stored name tags in the Hands-Free Calling Directory and the Destinations Directory.

To delete all name tags:

1. Press \( \text{g} \). The system responds “Ready,” followed by a tone.
2. Say “Delete all name tags.”

Listing Stored Numbers

The list command will list all the stored numbers and name tags.

Using the “List” Command

1. Press \( \text{g} \). The system responds “Ready,” followed by a tone.
3. Say “Hands-Free Calling.”
4. Say “List.”

Making a Call

Calls can be made using the following commands.

Dial or Call: The dial or call command can be used interchangeably to dial a phone number or a stored name tag.

Digit Dial: This command allows a phone number to be dialed by entering the digits one at a time.

Re-dial: This command is used to dial the last number used on the cell phone.
7-32 Infotainment System

Using the “Dial” or “Call” Command

1. Press \( \text{DIR} / \text{TALK} \). The system responds “Ready,” followed by a tone.
2. Say “Dial” or “Call.”
3. Say the entire number without pausing or say the name tag.

Once connected, the person called will be heard through the audio speakers.

Using the “Digit Dial” Command

The digit dial command allows a phone number to be dialed by entering the digits one at a time. After each digit is entered, the system repeats back the digit it heard followed by a tone.

If an unwanted number is recognized by the system, say “Clear” at any time to clear the last number.

To hear all of the numbers recognized by the system, say “Verify” at any time.

Using the “Re-dial” Command

1. Press \( \text{DIR} / \text{TALK} \). The system responds “Ready,” followed by a tone.
2. After the tone, say “Re-dial.” The system dials the last number called from the connected cell phone.

Once connected, the person called will be heard through the audio speakers.

Receiving a Call

When an incoming call is received, the audio system mutes and a ring tone is heard in the vehicle.

- Press \( \text{DIR} / \text{TALK} \) to answer the call.
- Press \( \text{SEND} / \text{PHONE} \) to ignore a call.
Call Waiting
Call waiting must be supported on the cell phone and enabled by the wireless service carrier.

- Press \( \text{a} \) / \( \text{b} \) to answer an incoming call when another call is active. The original call is placed on hold.
- Press \( \text{a} \) / \( \text{b} \) again to return to the original call.
- To ignore the incoming call, no action is required.
- Press \( \text{c} \) / \( \text{d} \) to disconnect the current call and switch to the call on hold.

Three-Way Calling
Three-way calling must be supported on the cell phone and enabled by the wireless service carrier.

1. While on a call, press \( \text{a} \) / \( \text{b} \).
2. Say “Three-way call.”
3. Use the dial or call command to dial the number of the third party to be called.
4. Once the call is connected, press \( \text{a} \) / \( \text{b} \) to link all callers together.

Ending a Call
Press \( \text{c} \) / \( \text{d} \) to end a call.

Muting a Call
During a call, all sounds from inside the vehicle can be muted so that the person on the other end of the call cannot hear them.

To mute a call, press \( \text{a} \) / \( \text{b} \), and then say “Mute Call.”

To cancel mute, press \( \text{a} \) / \( \text{b} \), and then say “Un-mute Call.”

Transferring a Call
Audio can be transferred between the Bluetooth system and the cell phone.

The cell phone must be paired and connected with the Bluetooth system before a call can be transferred. The connection process can take up to two minutes after the ignition is turned to ON/RUN.

To Transfer Audio from the Bluetooth System to a Cell Phone
During a call with the audio in the vehicle:

1. Press \( \text{a} \) / \( \text{b} \).
2. Say “Transfer Call.”

To Transfer Audio to the Bluetooth System from a Cell Phone
During a call with the audio on the cell phone, press \( \text{a} \) / \( \text{b} \). The audio transfers to the vehicle. If the audio does not transfer to the vehicle, use the audio transfer feature on the cell phone. See your cell phone manufacturer’s user guide for more information.
7-34 Infotainment System

Voice Pass-Thru
Voice pass-thru allows access to the voice recognition commands on the cell phone. See your cell phone manufacturer's user guide to see if the cell phone supports this feature.

To access contacts stored in the cell phone:

1. Press $\text{C} / \text{G}$. The system responds "Ready," followed by a tone.
2. Say "Bluetooth." This command can be skipped.
3. Say "Voice." The system responds "OK, accessing <phone name>.

The cell phone's normal prompt messages will go through their cycle according to the phone's operating instructions.

Dual Tone Multi-Frequency (DTMF) Tones
The Bluetooth system can send numbers and the numbers stored as name tags during a call. You can use this feature when calling a menu-driven phone system. Account numbers can also be stored for use.

Sending a Number or Name Tag During a Call

1. Press $\text{C} / \text{G}$. The system responds "Ready," followed by a tone.
2. Say "Dial."
3. Say the number or name tag to send.

Clearing the System
Unless information is deleted out of the in-vehicle Bluetooth system, it will be retained indefinitely. This includes all saved name tags in the phone book and phone pairing information. See the previous sections on "Deleting a Paired Phone" and "Deleting Name Tags."
Climate Controls

Climate Control Systems
The heating, cooling, defrosting, and ventilation for the vehicle can be controlled with this system.

A. Fan Control
B. Heated Seats
C. Temperature Control
D. Air Delivery Mode Controls
E. Air Conditioning
F. Defrost
G. Rear Window Defogger
H. Recirculation
8-2 Climate Controls

**Fan Control**: Turn to increase or decrease the fan speed. Turn the knob to O to turn the fan off.

**Temperature Control**: Turn to increase or decrease the temperature inside the vehicle. Maximum cooling occurs when the temperature knob is turned to MAX and the air conditioning system is turned on and air is recirculated inside the vehicle.

**Air Delivery Mode Control**: To change the current mode, press one of the following:

- **Vent**: Air is directed to the instrument panel outlets.
- **Bi-Level**: Air is directed to the instrument panel outlets and the floor outlets.
- **Floor**: Air is directed to the floor outlets.
- **Defog**: Clears the windows of fog or moisture. Air is directed to the windshield and floor outlets.
- **Defrost**: Clears the windshield of fog or frost more quickly. Air is directed to the windshield and side window outlets.

For best results, clear all snow and ice from the windshield before defrosting. Do not drive the vehicle until all windows are clear.

**Air Conditioning**

- **Air Conditioning**: Press to turn the air conditioning on or off. An indicator light turns on. If the fan is turned off or the outside temperature falls below freezing, the air conditioning will not work. The air conditioning might automatically come on when is selected.

- **Recirculation**: Press to turn on the recirculation. An indicator light comes on. Air is recirculated inside the vehicle. It helps to quickly cool the air inside the vehicle or prevent outside air and odors from entering.
Operation in the recirculation mode while the air conditioner is off increases humidity and may cause the windows to fog.

Recirculation is not available in the defrost or defog modes.

To improve fuel efficiency and to cool the vehicle faster, recirculation may be automatically selected in warm weather. The recirculation light will not come on. Press the \( \text{Recirc} \) to select recirculation; press it again to select outside air.

**Rear Window Defogger**

\( \text{Rec} \) (Rear Defogger): Press to turn the rear window defogger on or off. The rear window defogger turns off automatically after about 12 minutes. It can also be turned off by turning the ignition to ACC/ACCESSORY or LOCK/OFF. If turned on again it runs for about six minutes before turning off. At higher vehicle speeds, the rear defogger can stay on continuously.

Do not drive the vehicle until all windows are clear.

**Notice:** Do not use a razor blade or sharp object to clear the inside rear window. Do not adhere anything to the defogger grid lines in the rear glass. These actions may damage the rear defogger. Repairs would not be covered by your warranty.

\( \text{Heated} \) / \( \text{Heater} \) (Heated Seats): Press to turn on or off. See Heated Front Seats on page 3-6.

**Passenger Compartment Air Filter**

The passenger compartment air filter removes most of the pollen and dust from the air that enters the vehicle. The filter will need to be replaced periodically. See Maintenance Schedule on page 11-3.

Using the climate control system without an air filter installed is not recommended. Water or other debris could enter the system and result in leaks or noises. Always install a new filter when removing the old filter.

For more information, see your dealer.
8-4 Climate Controls

Air Vents

Use the air outlets located in the center and on the side of the instrument panel to direct the airflow. Use the thumbwheels near the center air outlets to direct airflow to the left or right.

Operation Tips

- In defog or defrost mode, warm air flows from some air outlets. To improve side window defogging or defrosting, direct side air outlets toward the side windows.
- Clear away any ice, snow, or leaves from air inlets at the base of the windshield that could block the flow of air into the vehicle.
- Keep the path under the front seats clear of objects to help circulate the air inside of the vehicle more effectively.
- Use of non-GM approved hood deflectors can adversely affect the performance of the system. Check with your dealer before adding equipment to the outside of the vehicle.

Driving Information

Distracted Driving

Distraction comes in many forms and can take your focus from the task of driving. Exercise good judgment and do not let other activities divert your attention away from the road. Many local governments have enacted laws regarding driver distraction. Become familiar with the local laws in your area.

To avoid distracted driving, always keep your eyes on the road, hands on the wheel, and mind on the drive.

- Do not use a phone in demanding driving situations.
  Use a hands-free method to place or receive necessary phone calls.
- Watch the road. Do not read, take notes, or look up information on phones or other electronic devices.
- Designate a front seat passenger to handle potential distractions.
- Become familiar with vehicle features before driving, such as programming favorite radio stations and adjusting climate control and seat settings. Program all trip information into any navigation device prior to driving.
- Wait until the vehicle is parked to retrieve items that have fallen to the floor.
- Stop or park the vehicle to tend to children.
- Keep pets in an appropriate carrier or restraint.
- Avoid stressful conversations while driving, whether with a passenger or on a cell phone.
WARNING

Taking your eyes off the road too long or too often could cause a crash resulting in injury or death. Focus your attention on driving.

Refer to the infotainment section for more information on using that system, including pairing and using a cell phone.

If equipped, refer to the navigation manual for information on that system, including pairing and using a cell phone.

Defensive Driving

Defensive driving means “always expect the unexpected.” The first step in driving defensively is to wear the safety belt. See Safety Belts on page 3-8.

• Assume that other road users (pedestrians, bicyclists, and other drivers) are going to be careless and make mistakes. Anticipate what they might do and be ready.

• Allow enough following distance between you and the driver in front of you.

• Focus on the task of driving.

Drunk Driving

Death and injury associated with drinking and driving is a global tragedy.

WARNING

Drinking and then driving is very dangerous. Your reflexes, perceptions, attentiveness, and judgment can be affected by even a small amount of alcohol. You can have a serious — or even fatal — collision if you drive after drinking.

Do not drink and drive or ride with a driver who has been drinking. Ride home in a cab; or if you are with a group, designate a driver who will not drink.

Control of a Vehicle

Braking, steering, and accelerating are important factors in helping to control a vehicle while driving.
9-4 Driving and Operating

Braking

Braking action involves perception time and reaction time. Deciding to push the brake pedal is perception time. Actually doing it is reaction time.

Average driver reaction time is about three-quarters of a second. In that time, a vehicle moving at 100 km/h (60 mph) travels 20 m (66 ft), which could be a lot of distance in an emergency.

Helpful braking tips to keep in mind include:

- Keep enough distance between you and the vehicle in front of you.
- Avoid needless heavy braking.
- Keep pace with traffic.

If the engine ever stops while the vehicle is being driven, brake normally but do not pump the brakes. Doing so could make the pedal harder to push down. If the engine stops, there will be some power brake assist but it will be used when the brake is applied. Once the power assist is used up, it can take longer to stop and the brake pedal will be harder to push.

Steering

Electric Power Steering (ZL1 Only)

The vehicle has electric power steering. It does not have power steering fluid. Regular maintenance is not required.

If power steering assist is lost due to a system malfunction, the vehicle can be steered, but may require increased effort. See your dealer if there is a problem.

If the steering wheel is turned until it reaches the end of its travel, and is held against that position for an extended period of time, power steering assist may be reduced.

Normal use of the power steering assist should return when the system cools down.

See specific vehicle steering messages under Vehicle Messages on page 5-35.
Hydraulic Power Steering (Except ZL1)

Your vehicle has hydraulic power steering. It may require maintenance. See Power Steering Fluid (Except ZL1) on page 10-31 or Power Steering Fluid (ZL1 Only) on page 10-32.

If power steering assist is lost due to a system malfunction, the vehicle can be steered, but may require increased effort.

See your dealer if there is a problem.

Curve Tips

- Take curves at a reasonable speed.
- Reduce speed before entering a curve.
- Maintain a reasonable steady speed through the curve.
- Wait until the vehicle is out of the curve before accelerating gently into the straightaway.

Steering in Emergencies

- There are some situations when steering around a problem may be more effective than braking.
- Holding both sides of the steering wheel allows you to turn 180 degrees without removing a hand.
- The Antilock Brake System (ABS) allows steering while braking.

Off-Road Recovery

The vehicle’s right wheels can drop off the edge of a road onto the shoulder while driving. Follow these tips:

1. Ease off the accelerator and then, if there is nothing in the way, steer the vehicle so that it straddles the edge of the pavement.

Curve Tips

- Take curves at a reasonable speed.
- Reduce speed before entering a curve.
- Maintain a reasonable steady speed through the curve.
- Wait until the vehicle is out of the curve before accelerating gently into the straightaway.

Off-Road Recovery

The vehicle’s right wheels can drop off the edge of a road onto the shoulder while driving. Follow these tips:

1. Ease off the accelerator and then, if there is nothing in the way, steer the vehicle so that it straddles the edge of the pavement.
9-6 Driving and Operating

2. Turn the steering wheel about one-eighth of a turn, until the right front tire contacts the pavement edge.
3. Then turn the steering wheel to go straight down the roadway.

Loss of Control

Skidding

There are three types of skids that correspond to the vehicle’s three control systems:

- Braking Skid — wheels are not rolling.
- Steering or Cornering Skid — too much speed or steering in a curve causes tires to slip and lose cornering force.
- Acceleration Skid — too much throttle causes the driving wheels to spin.

Defensive drivers avoid most skids by taking reasonable care suited to existing conditions, and by not overdriving those conditions. But skids are always possible.

If the vehicle starts to slide, follow these suggestions:

- Ease your foot off the accelerator pedal and quickly steer the way you want the vehicle to go. The vehicle may straighten out. Be ready for a second skid if it occurs.
- Slow down and adjust your driving according to weather conditions. Stopping distance can be longer and vehicle control can be affected when traction is reduced by water, snow, ice, gravel, or other material on the road. Learn to recognize warning clues — such as enough water, ice, or packed snow on the road to make a mirrored surface — and slow down when you have any doubt.
- Try to avoid sudden steering, acceleration, or braking, including reducing vehicle speed by shifting to a lower gear. Any sudden changes could cause the tires to slide.

Remember: Antilock brakes help avoid only the braking skid.

Racing or Other Competitive Driving

Racing or competitive driving may affect the vehicle warranty. See the warranty book before using the vehicle for racing or other competitive driving.

Notice: If you use the vehicle for racing or other competitive driving, the engine may use more oil than it would with normal use. Low oil levels can damage the engine. For information on how to add oil, see Engine Oil on page 10-13.
Be sure to check the oil level often during racing or other competitive driving and keep the level at or near the upper mark that shows the proper operating range on the engine oil dipstick.

For racing or competitive driving, it is recommended that the brake fluid be replaced with a high performance brake fluid that has a dry boiling point greater than 279°C (534°F). After conversion to the high performance brake fluid, follow the brake fluid service recommendations outlined by the fluid manufacturer. Do not use silicone or DOT-5 brake fluids.

ZL1 Only: For racing or competitive driving, it is recommended that the loading of the vehicle be limited to the driver only, with no other cargo, and that tires be inflated to at least 180 kPa (26 psi).

If the vehicle is used for racing or other competitive driving, the rear axle fluid temperatures may be higher than would occur in normal driving. We recommend that the rear axle fluid be drained and refilled with new fluid after every 24 hours of racing or competitive driving. See Recommended Fluids and Lubricants on page 11-12.

To prepare the Camaro ZL1 or SS brake system for track events and racing, the High Performance Brake Burnish as described below should be completed:

**Brake Burnishing**

New brake pads must be burnished before racing or other competitive driving.

*Notice:* These procedures are specific to the ZL1 or Camaro SS brake package. This procedure should not be run on other Camaro models as damage may result.

*Notice:* The new vehicle break-in period should be completed before performing the brake burnish procedure or damage may occur to the powertrain/engine. See New Vehicle Break-In on page 9-19.

When performed as instructed, these procedures will not damage the brakes. During the burnishing procedure, the brake pads will smoke and produce an odor. The braking force and pedal travel may increase. After the procedure is complete, the brake pads may appear white at the rotor contact.

Run this procedure in a safe manner and in compliance with all local and state ordinances/laws regarding motor vehicle operation. Run this procedure only on dry pavement.
9-8  Driving and Operating

Racing/Track Brake Burnish Procedure

Notice: Brake pedal fade will occur during this track burnish procedure and can cause brake pedal travel and force to increase. This could extend stopping distance until the brakes are fully burnished.

1. Apply the brake 25 times starting 100 km/h (60 mph) to 50 km/h (30 mph) while decelerating at 0.4 g. This is a medium brake application. Drive for at least 1 km (0.6 mi) between applying the brake. This first step may be skipped if there are more than 200 miles (320 km) on the brake pads.

2. Repeatedly apply the brakes from 100 km/h (60 mph) to 25 km/h (15 mph) while decelerating at 0.8 g. This is a hard brake application, without activating the antilock brake system (ABS). Drive for at least 1 km (0.6 mi) between stops. Repeat until the brake pedal travel starts to increase. Depending on conditions, this should take no longer than 25 brake applications.

3. Cool down: Drive at 100 km/h (60 mph) for approximately 15 km (10 mi) without using brakes.

4. Apply the brake 25 times from 100 km/h (60 mph) to 50 km/h (30 mph) while decelerating at 0.4 g. This is a medium brake application. Drive for at least 1 km (0.6 mi) between applications.
Driving on Wet Roads

Rain and wet roads can reduce vehicle traction and affect your ability to stop and accelerate. Always drive slower in these types of driving conditions and avoid driving through large puddles and deep-standing or flowing water.

**WARNING**

Wet brakes can cause crashes. They might not work as well in a quick stop and could cause pulling to one side. You could lose control of the vehicle.

After driving through a large puddle of water or a car/vehicle wash, lightly apply the brake pedal until the brakes work normally.

(Continued)

**WARNING (Continued)**

Flowing or rushing water creates strong forces. Driving through flowing water could cause the vehicle to be carried away. If this happens, you and other vehicle occupants could drown. Do not ignore police warnings and be very cautious about trying to drive through flowing water.

Hydroplaning

Hydroplaning is dangerous. Water can build up under the vehicle's tires so they actually ride on the water. This can happen if the road is wet enough and you are going fast enough. When the vehicle is hydroplaning, it has little or no contact with the road.

There is no hard and fast rule about hydroplaning. The best advice is to slow down when the road is wet.
9-10 Driving and Operating

Other Rainy Weather Tips
Besides slowing down, other wet weather driving tips include:
- Allow extra following distance.
- Pass with caution.
- Keep windshield wiping equipment in good shape.
- Keep the windshield washer fluid reservoir filled.
- Have good tires with proper tread depth. See Tires on page 10-54.
- Turn off cruise control.

Highway Hypnosis
Always be alert and pay attention to your surroundings while driving. If you become tired or sleepy, find a safe place to park the vehicle and rest.
Other driving tips include:
- Keep the vehicle well ventilated.
- Keep the interior temperature cool.
- Keep your eyes moving — scan the road ahead and to the sides.
- Check the rearview mirror and vehicle instruments often.

Hill and Mountain Roads
Driving on steep hills or through mountains is different than driving on flat or rolling terrain. Tips for driving in these conditions include:
- Keep the vehicle serviced and in good shape.
- Check all fluid levels and brakes, tires, cooling system, and transmission.
- Shift to a lower gear when going down steep or long hills.

⚠️ WARNING
If you do not shift down, the brakes could get so hot that they would not work well. You would then have poor braking or even none going down a hill. You could crash. Shift down to let the engine assist the brakes on a steep downhill slope.
Coasting downhill in N (Neutral) or with the ignition off is dangerous. The brakes will have to do all the work of slowing down and they could get so hot that they would not work well. You would then have poor braking or even none going down a hill. You could crash. Always have the engine running and the vehicle in gear when going downhill.

Stay in your own lane. Do not swing wide or cut across the center of the road. Drive at speeds that let you stay in your own lane.

Be alert on top of hills; something could be in your lane (stalled car, accident).

Pay attention to special road signs (falling rocks area, winding roads, long grades, passing or no-passing zones) and take appropriate action.

Winter Driving

Driving on Snow or Ice

Drive carefully when there is snow or ice between the tires and the road, creating less traction or grip. Wet ice can occur at about 0°C (32°F) when freezing rain begins to fall, resulting in even less traction. Avoid driving on wet ice or in freezing rain until roads can be treated with salt or sand. Drive with caution, whatever the condition. Accelerate gently so traction is not lost. Accelerating too quickly causes the wheels to spin and makes the surface under the tires slick, so there is even less traction.

Try not to break the fragile traction. If you accelerate too fast, the drive wheels will spin and polish the surface under the tires even more. The Antilock Brake System (ABS) on page 9-39 improves vehicle stability during hard stops on slippery roads, but apply the brakes sooner than when on dry pavement. Allow greater following distance on any slippery road and watch for slippery spots. Icy patches can occur on otherwise clear roads in shaded areas. The surface of a curve or an overpass can remain icy when the surrounding roads are clear. Avoid sudden steering maneuvers and braking while on ice.

Turn off cruise control on slippery surfaces.
Blizzard Conditions

Being stuck in snow can be a serious situation. Stay with the vehicle unless there is help nearby. If possible, use the Roadside Assistance Program (U.S. and Canada) on page 13-7 or Roadside Assistance Program (Mexico) on page 13-10. To get help and keep everyone in the vehicle safe:

- Turn on the hazard warning flashers.
- Tie a red cloth to an outside mirror.

**WARNING**

Snow can trap engine exhaust under the vehicle. This may cause exhaust gases to get inside. Engine exhaust contains carbon monoxide (CO) which cannot be seen or smelled. It can cause unconsciousness and even death.

If the vehicle is stuck in the snow:

- Clear away snow from around the base of your vehicle, especially any that is blocking the exhaust pipe.
- Check again from time to time to be sure snow does not collect there.
- Open a window about 5 cm (2 in) on the side of the vehicle that is away from the wind to bring in fresh air.

(Continued)

**WARNING (Continued)**

- Fully open the air outlets on or under the instrument panel.
- Adjust the climate control system to a setting that circulates the air inside the vehicle and set the fan speed to the highest setting. See “Climate Control Systems” in the Index.

For more information about carbon monoxide, see *Engine Exhaust on page 9-29*.

Run the engine for short periods only as needed to keep warm, but be careful.
To save fuel, run the engine for only short periods as needed to warm the vehicle and then shut the engine off and close the window most of the way to save heat. Repeat this until help arrives but only when you feel really uncomfortable from the cold. Moving about to keep warm also helps.

If it takes some time for help to arrive, now and then when you run the engine, push the accelerator pedal slightly so the engine runs faster than the idle speed. This keeps the battery charged to restart the vehicle and to signal for help with the headlamps. Do this as little as possible to save fuel.

If the Vehicle Is Stuck

Slowly and cautiously spin the wheels to free the vehicle when stuck in sand, mud, ice, or snow. If stuck too severely for the traction system to free the vehicle, turn the traction system off and use the rocking method.

**WARNING**

If the vehicle's tires spin at high speed, they can explode, and you or others could be injured. The vehicle can overheat, causing an engine compartment fire or other damage. Spin the wheels as little as possible and avoid going above 56 km/h (35 mph).

For information about using tire chains on the vehicle, see *Tire Chains on page 10-76.*

Rocking the Vehicle to Get it Out

Turn the steering wheel left and right to clear the area around the front wheels. Turn off any traction system. Shift back and forth between R (Reverse) and a forward gear, or with a manual transmission, between 1 (First) or 2 (Second) and R (Reverse), spinning the wheels as little as possible. To prevent transmission wear, wait until the wheels stop spinning before shifting gears. Release the accelerator pedal while shifting, and press lightly on the accelerator pedal when the transmission is in gear. Slowly spinning the wheels in the forward and reverse directions causes a rocking motion that could free the vehicle. If that does not get the vehicle out after a few tries, it might need to be towed out. If the vehicle does need to be towed out, see *Towing the Vehicle on page 10-96.*
Vehicle Load Limits

It is very important to know how much weight the vehicle can carry. This weight is called the vehicle capacity weight and includes the weight of all occupants, cargo and all nonfactory-installed options. Two labels on the vehicle show how much weight it may properly carry, the Tire and Loading Information label and the Certification label.

**WARNING**

Do not load the vehicle any heavier than the Gross Vehicle Weight Rating (GVWR), or either the maximum front or rear Gross Axle Weight Rating (GAWR). This can cause systems to break and change the way the vehicle handles. This could cause loss of control and a crash. Overloading can also shorten the life of the vehicle.

Tire and Loading Information Label

A vehicle-specific Tire and Loading Information label is attached to the vehicle's center pillar (B-pillar). With the driver door open, the label is attached near the door lock post. The Tire and Loading Information label shows the number of occupant seating positions (A), and the...
maximum vehicle capacity weight (B) in kilograms and pounds.

The Tire and Loading Information label also shows the tire size of the original equipment tires (C) and the recommended cold tire inflation pressures (D). For more information on tires and inflation see Tires on page 10-54 and Tire Pressure on page 10-62.

There is also important loading information on the Certification label. It tells you the Gross Vehicle Weight Rating (GVWR) and the Gross Axle Weight Rating (GAWR) for the front and rear axle. See “Certification Label” later in this section.

Steps for Determining Correct Load Limit

1. Locate the statement “The combined weight of occupants and cargo should never exceed XXX kg or XXX lbs” on your vehicle’s placard.
2. Determine the combined weight of the driver and passengers that will be riding in your vehicle.
3. Subtract the combined weight of the driver and passengers from XXX kg or XXX lbs.
4. The resulting figure equals the available amount of cargo and luggage load capacity. For example, if the “XXX” amount equals 1400 lbs and there will be five 150 lb passengers in your vehicle, the amount of available cargo and luggage load capacity is 650 lbs (1400 − 750 (5 x 150) = 650 lbs).
5. Determine the combined weight of luggage and cargo being loaded on the vehicle. That weight may not safely exceed the available cargo and luggage load capacity calculated in Step 4.
9-16  Driving and Operating

6. If your vehicle will be towing a trailer, the load from your trailer will be transferred to your vehicle. Consult this manual to determine how this reduces the available cargo and luggage load capacity of your vehicle.

See Trailer Towing (Except ZL1) on page 9-66 or Trailer Towing (ZL1) on page 9-66 for important information on towing a trailer, towing safety rules, and trailering tips.

Example 1
A. Vehicle Capacity Weight for Example 1 = 453 kg (1,000 lbs).
B. Subtract Occupant Weight @ 68 kg (150 lbs) × 2 = 136 kg (300 lbs).
C. Available Occupant and Cargo Weight = 317 kg (700 lbs).

Example 2
A. Vehicle Capacity Weight for Example 2 = 453 kg (1,000 lbs).
B. Subtract Occupant Weight @ 68 kg (150 lbs) × 5 = 340 kg (750 lbs).
C. Available Cargo Weight = 113 kg (250 lbs).
Example 3

A. Vehicle Capacity Weight for Example 3 = 453 kg (1,000 lbs).

B. Subtract Occupant Weight @ 91 kg (200 lbs) × 5 = 453 kg (1,000 lbs).

C. Available Cargo Weight = 0 kg (0 lbs).

Refer to the vehicle’s Tire and Loading Information label for specific information about the vehicle’s capacity weight and seating positions. The combined weight of the driver, passengers, and cargo should never exceed the vehicle’s capacity weight.

Certification Label

A vehicle-specific Certification label is attached to the vehicle’s center pillar (B-pillar). With the driver door open, the label is attached near the door lock post. The label tells the gross weight capacity of the vehicle, called the Gross Vehicle Weight Rating (GVWR). The GVWR includes the weight of the vehicle, all occupants, fuel, and cargo. Never exceed the GVWR for the vehicle, or the Gross Axle Weight Rating (GAWR) for either the front or rear axle.
And, if there is a heavy load, it should be spread out. See "Steps for Determining Correct Load Limit" earlier in this section.

⚠️ WARNING

Do not load the vehicle any heavier than the Gross Vehicle Weight Rating (GVWR), or either the maximum front or rear Gross Axle Weight Rating (GAWR). This can cause systems to break and change the way the vehicle handles. This could cause loss of control and a crash. Overloading can also shorten the life of the vehicle.

⚠️ WARNING

If you put things inside the vehicle — like suitcases, tools, packages, or anything else — they will go as fast as the vehicle goes. If you have to stop or turn quickly, or if there is a crash, they will keep going.

⚠️ WARNING

Things inside the vehicle can strike and injure people in a sudden stop or turn, or in a crash.
- Put things in the cargo area of the vehicle. In the cargo area, put them as far forward as possible. Try to spread the weight evenly.

(Continued)

⚠️ WARNING (Continued)

- Never stack heavier things, like suitcases, inside the vehicle so that some of them are above the tops of the seats.
- Do not leave an unsecured child restraint in the vehicle.
- Secure loose items in the vehicle.
- Do not leave a seat folded down unless needed.
Starting and Operating

New Vehicle Break-In

Notice: Follow these recommended guidelines during the first 2,414 km (1,500 mi) of driving this vehicle. Parts have a break-in period and performance will be better in the long run.

- For the first 2,414 km (1,500 mi):
- Avoid full throttle starts and abrupt stops.
- Do not exceed 4000 engine rpm.
- Avoid driving at any one constant speed, fast or slow.
- Do not drive above 129 km/h (80 mph).
- Avoid downshifting to brake or slow the vehicle when the engine speed will exceed 4,000 rpm.
- Do not let the engine labor. Never lug the engine in high gear at low speeds. With a manual transmission, shift to the next lower gear. This rule applies at all times, not just during the break-in period.
- Do not participate in racing events, sport driving schools, or similar activities during this break-in period.
- Check engine oil with every refueling and add if necessary. Oil and fuel consumption may be higher than normal during the first 2,414 km (1,500 mi).
- To break in new tires, drive at moderate speeds and avoid hard cornering for the first 322 km (200 mi). New tires do not have maximum traction and may tend to slip.
- New brake linings also need a break-in period. Avoid making hard stops during the first 322 km (200 mi). This is recommended every time brake linings are replaced.
- Should the vehicle be used for racing or competitive driving (after break-in), the rear axle lubricant must be replaced before hand.

See Racing or Other Competitive Driving on page 9-6.

Front Fascia

The vehicle is equipped with a front fascia which has minimal ground clearance.

Use care when approaching curbs, bumps or objects on road surfaces and avoid them when possible.
9-20  Driving and Operating

Ignition Positions

The ignition switch has four different positions.

**Notice:** Using a tool to force the key to turn in the ignition could cause damage to the switch or break the key. Use the correct key, make sure it is all the way in, and turn it only with your hand. If the key cannot be turned by hand, see your dealer.

The key must be fully extended to start the vehicle.

To shift out of P (Park), turn the ignition to ON/RUN and apply the brake pedal.

**A (STOPPING THE ENGINE/LOCK/OFF):** When the vehicle is stopped, turn the ignition switch to LOCK/OFF to turn the engine off. Retained Accessory Power (RAP) will remain active. See *Retained Accessory Power (RAP) on page 9-25*.

This is the only position from which the key can be removed. This locks the steering wheel, ignition, and automatic transmission.

On vehicles with an automatic transmission, the shift lever must be in P (Park) to turn the ignition switch to the LOCK/OFF position.

Do not turn the engine off when the vehicle is moving. This will cause a loss of power assist in the brake and steering systems and disable the airbags.

If the vehicle must be shut off in an emergency:

1. Brake using a firm and steady pressure. Do not pump the brakes repeatedly. This may deplete power assist, requiring increased brake pedal force.

2. Shift the vehicle to neutral. This can be done while the vehicle is moving. After shifting to neutral, continue to firmly apply the brakes and steer the vehicle to a safe location.

3. Come to a complete stop. Shift to P (Park) with an automatic transmission, or Neutral with a manual transmission. Turn the ignition to LOCK/OFF.

4. Set the parking brake. See *Parking Brake on page 9-40*. 
Turning off the vehicle while moving may cause loss of power assist in the brake and steering systems and disable the airbags. While driving, only shut the vehicle off in an emergency.

If the vehicle cannot be pulled over, and must be shut off while driving, turn the ignition to ACC/ACCESSORY.

The ignition switch can bind in the LOCK/OFF position with the wheels turned off center. If this happens, move the steering wheel from right to left while turning the key to ACC/ACCESSORY. If this does not work, then the vehicle needs service.

B (ACC/ACCESSORY): This position provides power to some of the electrical accessories. It unlocks the steering wheel and ignition. To move the key from ACC/ACCESSORY to LOCK/OFF, push in the key and then turn it to LOCK/OFF.

C (ON/RUN): The ignition switch stays in this position when the engine is running. This position can be used to operate the electrical accessories, including the ventilation fan and 12-volt power outlet, as well as to display some warning and indicator lights. This position can also be used for service and diagnostics, and to verify the proper operation of the malfunction indicator lamp as may be required for emission inspection purposes. The transmission is also unlocked in this position on automatic transmission vehicles.

The battery could be drained if the key is left in the ACC/ACCESSORY or ON/RUN position with the engine off. The vehicle might not start if the battery is allowed to drain for an extended period of time.

D (START): This position starts the engine. When the engine starts, release the key. The ignition switch will return to ON/RUN for normal driving.

A warning tone sounds when the driver door is opened if the ignition is still in ACC/ACCESSORY and the key is in the ignition.
Starting the Engine
Place the transmission in the proper gear.

Automatic Transmission
Move the shift lever to P (Park) or N (Neutral). The engine will not start in any other position. To restart the vehicle when it is already moving, use N (Neutral) only.

Notice: Do not try to shift to P (Park) if the vehicle is moving. If you do, you could damage the transmission. Shift to P (Park) only when the vehicle is stopped.

Manual Transmission
The shift lever should be in Neutral and the parking brake engaged. Hold the clutch pedal down to the floor and start the engine. The vehicle will not start if the clutch pedal is not all the way down.
Starting Procedure

1. With your foot off the accelerator pedal, turn the ignition key to START. When the engine starts, let go of the key. The idle speed will go down as the engine warms. Do not race the engine immediately after starting it. Allow the oil to warm up and lubricate all moving parts.

The vehicle has a Computer-Controlled Cranking System. This feature assists in starting the engine and protects components. If the ignition key is turned to the START position, and then released when the engine begins cranking, the engine will continue cranking for a few seconds or until the vehicle starts. If the engine does not start and the key is held in START for many seconds, cranking stops after 15 seconds to prevent cranking motor damage. To prevent gear damage, this system also prevents cranking if the engine is already running. Engine cranking can be stopped by turning the ignition switch to ACC/ACCESSORY or LOCK/OFF.

Notice: Cranking the engine for long periods of time, by returning the key to the START position immediately after cranking has ended, can overheat and damage the cranking motor, and drain the battery. Wait at least 15 seconds between each try, to let the cranking motor cool down.

2. If the engine does not start after five to 10 seconds, especially in very cold weather (below −18°C or 0°F), it could be flooded with too much gasoline. Push the accelerator pedal all the way to the floor and hold it there as you hold the key in START for a maximum of 15 seconds. Wait at least 15 seconds between each try, to allow the cranking motor to cool. When the engine starts, let go of the key and accelerator. If the vehicle starts briefly but then stops again, repeat the procedure. This clears the extra gasoline from the engine. Do not race the engine immediately after starting it. Operate the engine and transmission gently until the oil warms up and lubricates all moving parts.

Notice: The engine is designed to work with the electronics in the vehicle. If you add electrical parts or accessories, you could change the way the engine operates. Before adding electrical equipment, check with your dealer. If you do not, the engine might not perform properly. Any resulting damage would not be covered by the vehicle warranty.
Engine Heater

The engine coolant heater, if available, can help in cold weather conditions at or below −18°C (0°F) for easier starting and better fuel economy during engine warm-up. Plug in the coolant heater at least four hours before starting the vehicle. An internal thermostat in the plug-end of the cord will prevent engine coolant heater operation at temperatures above −18°C (0°F).

Using the Engine Coolant Heater

1. Turn off the engine.
2. Open the hood and unwrap the electrical cord.
3. Plug it into a normal, grounded 110-volt AC outlet.
4. Before starting the engine, be sure to unplug and store the cord as it was before to keep it away from moving engine parts. If you do not it could be damaged.

The length of time the heater should remain plugged in depends on several factors. Ask a dealer in the area where you will be parking the vehicle for the best advice on this.

WARNING

Plugging the cord into an ungrounded outlet could cause an electrical shock. Also, the wrong kind of extension cord could }

(Continued)

WARNING (Continued)

overheat and cause a fire. You could be seriously injured. Plug the cord into a properly grounded three-prong 110-volt AC outlet. If the cord will not reach, use a heavy-duty three-prong extension cord rated for at least 15 amps.
Retained Accessory Power (RAP)

These vehicle accessories may be used for up to 10 minutes after the engine is turned off:

- Audio System
- Power Windows
- Sunroof (if equipped)

The power windows and sunroof will continue to work for up to 10 minutes or until any door is opened. The radio will work when the key is in ON/RUN or ACC/ACCESSORY. Once the key is turned from ON/RUN to LOCK/OFF, the radio will continue to work for 10 minutes, or until the driver door is opened or the key is removed from the ignition.

Shifting Into Park (Automatic Transmission)

**WARNING**

It can be dangerous to get out of the vehicle if the shift lever is not fully in P (Park) with the parking brake firmly set. The vehicle can roll. If you have left the engine running, the vehicle can move suddenly. You or others could be injured. To be sure the vehicle will not move, even when you are on fairly level ground, use the steps that follow. If you are pulling a trailer, see Driving Characteristics and Towing Tips on page 9-62.

Use this procedure to shift into P (Park):

1. Hold the brake pedal down and set the parking brake. See Parking Brake on page 9-40 for more information.
2. Hold the button on the shift lever and push the lever toward the front of the vehicle into P (Park).
3. Turn the ignition to LOCK/OFF.
4. Remove the key.
9-26 Driving and Operating

Leaving the Vehicle with the Engine Running

It can be dangerous to leave the vehicle with the engine running. The vehicle could move suddenly if the shift lever is not fully in P (Park) with the parking brake firmly set. And, if you leave the vehicle with the engine running, it could overheat and even catch fire. You or others could be injured. Do not leave the vehicle with the engine running.

If you have to leave the vehicle with the engine running, the vehicle must be in P (Park) and the parking brake set. Release the button and check that the shift lever cannot be moved out of P (Park).

Torque Lock
Torque lock is when the weight of the vehicle puts too much force on the parking pawl in the transmission. This happens when parking on a hill and shifting the transmission into P (Park) is not done properly and then it is difficult to shift out of P (Park). To prevent torque lock, set the parking brake and then shift into P (Park). To find out how, see “Shifting Into Park” listed previously.

If torque lock does occur, the vehicle may need to be pushed uphill by another vehicle to relieve the parking pawl pressure, so you can shift out of P (Park).

Shifting out of Park
This vehicle is equipped with an electronic shift lock control system. The shift lock release is designed to:

- Prevent ignition key removal unless the shift lever is in P (Park) with the shift lever button fully released.
- Prevent movement of the shift lever out of P (Park), unless the ignition is in ON/RUN and the brake pedal is applied.

The shift lock release is always functional except in the case of an uncharged or low voltage (less than 9-volt) battery.

If the vehicle has an uncharged battery or a battery with low voltage, try charging or jump starting the battery. See Jump Starting on page 10-93.
To shift out of P (Park):
1. Apply the brake pedal.
2. Release the parking brake. See Parking Brake on page 9-40.
3. Press the shift lever button.
4. Move the shift lever to the desired position.

If still unable to shift out of P (Park):
1. Fully release the shift lever button.
2. Hold the brake pedal down and press the shift lever button again.
3. Move the shift lever to the desired position.

If the shift lever still cannot be moved from P (Park), see Shift Lock Manual Release.

Shift Lock Manual Release
The transmission has an electric park lock called a shift lock manual release. The key must be in the ON/RUN position, and the brake pedal pressed so the shift lever can be moved from the P (Park) position. If the battery has lost power, the shift lever cannot be moved from P (Park) unless the shift lock manual release is disengaged manually.

To access the shift lock manual release:
1. Apply the parking brake.
2. Pull the passenger side console trim away from the front half of the console to expose the shift lever mechanism.
9-28 Driving and Operating

3. Remove the retainer and the shift lock manual release cover.

4. Push and hold the manual release lever toward the rear of the vehicle.

5. Press the select button and move the shift lever to the N (Neutral) position.

6. Release the lever.

7. After the vehicle has been moved, align the shift lock manual release cover plate and install the retainer so the automatic transmission can operate properly.

8. Place the console trim panel in the original position, aligning the fasteners on the trim panel with the slots in the console. Press in the side trim until it clicks in place.

The shift lever locks if it is moved back to the P (Park) position.

Parking (Manual Transmission)

If the vehicle has a manual transmission, before getting out of the vehicle, move the shift lever into R (Reverse), and firmly apply the parking brake. Once the shift lever has been placed into R (Reverse) with the clutch pedal pressed in, turn the ignition key to LOCK/OFF, remove the key, and release the clutch.

If parking on a hill, or if the vehicle is pulling a trailer, see Driving Characteristics and Towing Tips on page 9-62.

Parking over Things That Burn

**WARNING**

Things that can burn could touch hot exhaust parts under the vehicle and ignite. Do not park over papers, leaves, dry grass, or other things that can burn.
Active Fuel Management®

Vehicles with V8 engines and an automatic transmission, except ZL1, have Active Fuel Management®. This system allows the engine to operate on either all or half of its cylinders, depending on the driving conditions.

When less power is required, such as cruising at a constant vehicle speed, the system will operate in the half cylinder mode, allowing the vehicle to achieve better fuel economy. When greater power demands are required, such as accelerating from a stop, passing, or merging onto a freeway, the system will maintain full-cylinder operation.

Engine Exhaust

⚠️️ WARNING

Engine exhaust contains carbon monoxide (CO) which cannot be seen or smelled. Exposure to CO can cause unconsciousness and even death.

Exhaust may enter the vehicle if:

- The vehicle idles in areas with poor ventilation (parking garages, tunnels, deep snow that may block underbody airflow or tail pipes).
- The exhaust smells or sounds strange or different.
- The exhaust system leaks due to corrosion or damage.
- The vehicle exhaust system has been modified, damaged or improperly repaired.

(Continued)
Running the Vehicle While Parked

It is better not to park with the engine running. But if you ever have to, here are some things to know.

**WARNING**

Idling a vehicle in an enclosed area with poor ventilation is dangerous. Engine exhaust may enter the vehicle. Engine exhaust contains Carbon Monoxide (CO) which cannot be seen or smelled. It can cause unconsciousness and even death. Never run the engine in an enclosed area that has no fresh air ventilation. For more information, see *Engine Exhaust on page 9-29.*

**WARNING**

It can be dangerous to get out of the vehicle if the automatic transmission shift lever is not fully in P (Park) with the parking brake firmly set. The vehicle can roll. Do not leave the vehicle when the engine is running unless you have to. If you have left the engine running, the vehicle can move suddenly. You or others could be injured. To be sure the vehicle will not move, even when you are on fairly level ground, always set the parking brake and move the shift lever to P (Park).

Follow the proper steps to be sure the vehicle will not move. See *Shifting Into Park (Automatic Transmission) on page 9-25.*

If parking on a hill and pulling a trailer, see *Driving Characteristics and Towing Tips on page 9-62.*

Automatic Transmission

The automatic transmission has a shift lever located on the console between the seats.

The Driver Information Center (DIC) displays the current gear selected in the lower left corner. When Sport Mode is active, an S is displayed. If Manual Mode or Electronic Range Select (ERS) Mode are active, an M and the current gear selected (Tap Shift) or the maximum gear allowed (ERS Mode) are displayed next to the M.
**P (Park):** This position locks the rear wheels. It is the best position to use when starting the engine because the vehicle cannot move easily.

**WARNING**

It is dangerous to get out of the vehicle if the shift lever is not fully in P (Park) with the parking brake firmly set. The vehicle can roll.

Do not leave the vehicle when the engine is running unless you have to. If you have left the engine running, the vehicle can move suddenly. You or others could be injured. To be sure the vehicle will not move, even when you are on fairly level ground, always set the parking brake and move the shift lever to P (Park). See **Shifting Into Park (Automatic Transmission)** on page 9-25.

If you are pulling a trailer, see **Driving Characteristics and Towing Tips** on page 9-62.

Make sure the shift lever is fully in P (Park) before starting the engine. The vehicle has an automatic transmission shift lock control system. The regular brake must be fully applied first and then the shift lever button pressed before shifting from P (Park) when the ignition key is in ON/RUN. If you cannot shift out of P (Park), ease pressure on the shift lever, then push the shift lever all the way into P (Park) as you maintain brake application. Then press the shift lever button and move the shift lever into another gear. See **Shifting out of Park** on page 9-26.

**R (Reverse):** Use this gear to back up.

**Notice:** Shifting to R (Reverse) while the vehicle is moving forward could damage the transmission. The repairs would not be covered by the vehicle warranty. Shift to R (Reverse) only after the vehicle is stopped.

To rock the vehicle back and forth to get out of snow, ice, or sand without damaging the transmission, see **If the Vehicle Is Stuck** on page 9-13.
9-32 Driving and Operating

N (Neutral): In this position, the engine does not connect with the wheels. To restart the engine when the vehicle is already moving, use N (Neutral) only. Also, use N (Neutral) when the vehicle is being towed.

**WARNING**

Shifting into a drive gear while the engine is running at high speed is dangerous. Unless your foot is firmly on the brake pedal, the vehicle could move very rapidly. You could lose control and hit people or objects. Do not shift into a drive gear while the engine is running at high speed.

**Notice:** Shifting out of P (Park) or N (Neutral) with the engine running at high speed may damage the transmission. The repairs would not be covered by the vehicle warranty. Be sure the engine is not running at high speed when shifting the vehicle.

D (Drive): This position is for normal driving. It provides the best fuel economy. When the ZL1 is in D (Drive), the first shift after start will be from 1 (First) gear. Following starts will begin in 2 (Second) gear.

If more power is needed for passing, and the vehicle is:

- Going less than 56 km/h (35 mph), push the accelerator pedal about halfway down.
- Going about 56 km/h (35 mph) or more, push the accelerator all the way down.

**Powertrain Braking (V6 and V8 Engines Except ZL1)**

When driving on steep descents with the shift lever in D (Drive) or M (Manual Mode) where frequent braking is required, the transmission will shift down a gear to help hold vehicle speed and reduce brake wear. If the driver continues to press the brake, the transmission will downshift until 3 (Third) gear is reached.

If the brake is released for some time, the transmission will upshift a gear. If the road levels out and the accelerator pedal is pressed, the transmission will upshift until the appropriate gear is reached.

**Notice:** If the vehicle seems to accelerate slowly or not shift gears when you go faster, and you continue to drive the vehicle that way, you could damage the transmission. Have the vehicle serviced right away.
**M (Manual Mode):** This position allows the driver to select gears appropriate for current driving conditions.

With the shift lever in M (Manual Mode) position, vehicles with axle code GW8 will enter ERS Mode. See *Manual Mode on page 9-34.*

With the shift lever in M (Manual Mode) position, without using the Tap Shift controls on the steering wheel, vehicles with any axle other than GW8 will be in Sport Mode. Sport Mode provides firmer, quicker shifting. The transmission will shift automatically until the Tap Shift controls are used. Tap Shift activates driver manual gear selection. See *Manual Mode on page 9-34.*

**V6 models without Axle GW8, V8 models except ZL1**

While driving in Sport Mode, if Tap Shift has not been activated, the transmission determines when the vehicle is being driven in a competitive manner. The transmission may remain in a gear longer than it would in the normal driving mode based on throttle input and vehicle lateral acceleration.

If there is a rapid reduction in throttle from a heavy throttle position, the transmission will maintain the current gear up to near redline rpm. While braking, the transmission will maintain the current gear up to approximately 4600 rpm. While braking, the transmission will automatically downshift to the next lower gear keeping engine speed below approximately 3000 rpm. If the vehicle is then driven for a short time at a steady speed, and without high cornering loads, the transmission will up-shift one gear at a time, until 6 (Sixth) gear. After shifting to 6 (Sixth) gear, or coming to a complete stop, the transmission will return to normal Sport Mode shifting.

**ZL1**

While driving in Sport Mode, if Tap Shift has not been activated, the transmission determines when the vehicle is being driven in a competitive manner, in a straight line or while turning. The transmission may remain in a gear longer than it would in the normal driving mode based on throttle input and vehicle lateral acceleration.

If there is a rapid reduction in throttle from a heavy throttle position, the transmission will maintain the current gear up to near redline rpm. While braking, the transmission will automatically downshift to the next lower gear keeping engine speed above approximately 3000 rpm. If the vehicle is then driven for a short time at a steady speed, and without high cornering loads, the transmission will up-shift one gear at a time, until 6 (Sixth) gear. After shifting to 6 (Sixth) gear, or coming to a complete stop, the transmission will return to normal Sport Mode shifting.
9-34  Driving and Operating

If the vehicle detects aggressive cornering, even without a heavy application of the throttle, the transmission will downshift and hold a lower gear to near redline rpm, to aid in vehicle handling balance and to improve corner exit speeds.

Manual Mode

Electronic Range Select (ERS) Mode

Vehicles with axle code GW8 have an ERS Mode. ERS Mode allows you to choose the top-gear limit of the transmission with fully automatic gear selection. This can help control the vehicle’s speed while driving downhill or towing a trailer. The vehicle has an electronic shift position indicator within the instrument panel cluster. When using the ERS mode a number will display next to the M, indicating the current maximum gear allowed.

Vehicles with this feature have indicators on the steering wheel. The controls are on the back of the steering wheel.

To use this feature:
1. Move the shift lever to M (Manual Mode).
2. Press the plus/minus buttons located on the back of the steering wheel, to increase or decrease the gear range available.

When you shift from D (Drive) to M (Manual Mode), the transmission will shift to a lower gear range. The highest gear available for this range is displayed next to the M in the DIC. The number displayed in the DIC is the highest gear that the transmission will be allowed to operate in. This means that all gears below that number are available. For example, when 4 (Fourth) is shown next to the M, 1 (First) through 4 (Fourth) gears are automatically shifted by the vehicle. The transmission will not shift into 5 (Fifth) until the + (Plus) button is used or you shift back into D (Drive).

While in M (Manual Mode), the transmission will prevent shifting to a lower gear range if the engine speed is too high. The DIC will still indicate the lower gear range selected, but the transmission will not initiate the downshift until the vehicle has met a minimum speed requirement.
Tap Shift

Vehicles with any axle other than GW8 have a Tap Shift Mode. Tap Shift allows the driver to manually control the automatic transmission. To use Tap Shift, the shift lever must be in M (Manual Mode). Vehicles with this feature have indicators on the steering wheel. The controls are on the back of the steering wheel.

Tap the left control to downshift, and the right control to upshift. The DIC display indicates the gear the vehicle is in.

While in M (Manual Mode), the transmission will prevent shifting to a lower gear if the engine speed is too high. If the tap down – (Minus) button is held while the vehicle slows down, the M in the DIC will flash, and the downshift will be allowed when vehicle speed is low enough. Continuing to hold the tap down – (Minus) button will not cause the transmission to continue downshifting. Each downshift must be requested separately by releasing and reapplying the tap down – (Minus) button.

ZL1 vehicles equipped with a Head-Up Display (HUD) also have shift timing lights across the top of the display. As you approach a shift point, the row of lights grow closer together. The transmission should be shifted before the lights come together in the middle of the display. If the lights begin flashing, you have exceeded the shift point. Shift immediately.
9-36  Driving and Operating

See Driver Information Center (DIC) on page 5-26 and Head-Up Display (HUD) on page 5-30.

When in Tap Shift Mode, the driver can exit Tap Shift by holding the right (upshift) control for two seconds. The transmission will return to automatic shifting.

The driver may choose to briefly enter Tap Shift Mode while in D (Drive). Tapping either the upshift or downshift control will place the transmission in Tap Shift Mode. The driver may then exit Tap Shift Mode by holding the upshift control for two seconds. The system will return to automatic shifting after 10 seconds of cruising at a steady speed, or when the vehicle comes to a stop.

The driver may use this for sport driving or when climbing or descending hills, to stay in gear longer, or to downshift for more power or engine braking. The transmission will only allow you to shift into gears appropriate for the vehicle speed and engine revolutions per minute (rpm). The transmission will not automatically shift to the next higher gear if the engine rpm is too high. If shifting is prevented for any reason, the message SHIFT DENIED will appear in the DIC, indicating that the transmission has not shifted gears. While in the Tap Shift Mode, the transmission will not automatically downshift on hard acceleration.

When coasting to a stop in Tap Shift Mode, the V6 transmission will automatically downshift to 1 (First) gear, and the V8 transmission will automatically downshift to 2 (Second) gear. A 1 (First) gear start can be selected using the Tap Shift controls on V8 models. When accelerating from a stop, the transmissions will hold these gears until the driver manually selects higher gears using the Tap Shift controls.

When accelerating the vehicle from a stop in snowy and icy conditions, you may want to shift into 2 (Second) gear. A higher gear ratio allows you to gain more traction on slippery surfaces. ZL1 vehicles may also be shifted into 3 (Third) gear.
Manual Transmission

Shift Pattern (V8 Engines)

These are the shift patterns for the six-speed manual transmissions.

To operate the transmission:

1 (First): Press the clutch pedal and shift into 1 (First). Then slowly let up on the clutch pedal as you press the accelerator pedal.

2 (Second): Press the clutch pedal as you let up on the accelerator pedal and shift into 2 (Second). Then, slowly let up on the clutch pedal as you press the accelerator pedal.

3 (Third), 4 (Fourth), 5 (Fifth), and 6 (Sixth): Shift into 3 (Third), 4 (Fourth), 5 (Fifth), and 6 (Sixth) the same way you do for 2 (Second). Slowly let up on the clutch pedal as you press the accelerator pedal.

To stop, let up on the accelerator pedal and press the brake pedal. Just before the vehicle stops, press the clutch pedal and the brake pedal, and shift to Neutral.
**Neutral:** Use this position when you start or idle the engine. The shift lever is in Neutral when it is centered in the shift pattern, not in any gear.

**R (Reverse):** To back up, press down the clutch pedal and shift into R (Reverse). On V8 models, apply pressure to get the lever past 5 (Fifth) and 6 (Sixth) into R (Reverse). Let up on the clutch pedal slowly while pressing the accelerator pedal.

---

**One to Four Shift Message (V8 Only)**

You must complete the shift into 4 (Fourth) to turn off this feature. This helps you get the best possible fuel economy.

After shifting to 4 (Fourth), you may downshift to a lower gear if you prefer.

**Notice:** Forcing the shift lever into any gear except 4 (Fourth) when the 1—4 SHIFT message comes on may damage the transmission. Shift only from 1 (First) to 4 (Fourth) when the message comes on.

This message will come on when:

- The engine coolant temperature is higher than 76°C (169°F).
- The vehicle is accelerating from a stop and going 24 to 31 km/h (15 to 19 mph).
- The vehicle is at 21 percent throttle or less.
ZL1 vehicles equipped with a Head-Up Display (HUD) also have shift timing lights across the top of the display. As you approach a shift point, the row of lights grow closer together. The transmission should be shifted before the lights come together in the middle of the display. If the lights begin flashing, you have exceeded the shift point. Shift immediately.

See Driver Information Center (DIC) on page 5-26 and Head-Up Display (HUD) on page 5-30.

**Brakes**

**Antilock Brake System (ABS)**

This vehicle has the Antilock Brake System (ABS), an advanced electronic braking system that helps prevent a braking skid.

When the engine is started and the vehicle begins to drive away, ABS checks itself. A momentary motor or clicking noise might be heard while this test is going on, and it might even be noticed that the brake pedal moves a little. This is normal.

If driving safely on a wet road and it becomes necessary to slam on the brakes and continue braking to avoid a sudden obstacle, a computer senses that the wheels are slowing down. If one of the wheels is about to stop rolling, the computer will separately work the brakes at each wheel.

ABS can change the brake pressure to each wheel, as required, faster than any driver could. This can help the driver steer around the obstacle while braking hard.

As the brakes are applied, the computer keeps receiving updates on wheel speed and controls braking pressure accordingly.

If there is a problem with ABS, this warning light stays on. See **Antilock Brake System (ABS) Warning Light** on page 5-22.
9-40 Driving and Operating

Remember: ABS does not change the time needed to get a foot up to the brake pedal or always decrease stopping distance. If you get too close to the vehicle in front of you, there will not be enough time to apply the brakes if that vehicle suddenly slows or stops. Always leave enough room up ahead to stop, even with ABS.

Using ABS

Do not pump the brakes. Just hold the brake pedal down firmly and let ABS work. You might hear the ABS pump or motor operating and feel the brake pedal pulsate, but this is normal.

Braking in Emergencies

ABS allows the driver to steer and brake at the same time. In many emergencies, steering can help more than even the very best braking.

Parking Brake

To apply the parking brake, pull up on the parking brake handle. It is not necessary to push in on the release button while applying the parking brake. If the ignition is in the ON/RUN position, the brake system warning light will come on. See Brake System Warning Light on page 5-21.

To release the parking brake:
1. Hold the brake pedal down.
2. Pull the parking brake handle up until you can press the release button.
3. Hold the release button in as you move the brake handle all the way down.

Notice: Driving with the parking brake on can overheat the brake system and cause premature wear or damage to brake system parts. Make sure that the parking brake is fully released and the brake warning light is off before driving.

Driving with the parking brake applied will cause a warning chime to sound and the RELEASE PARKING BRAKE message to appear in the DIC. The message will remain on until:

- The parking brake is released.
- The vehicle comes to a stop.

Parking Brake

To apply the parking brake, pull up on the parking brake handle. It is not necessary to push in on the release button while applying the parking brake. If the ignition is in the ON/RUN position, the brake system warning light will come on. See Brake System Warning Light on page 5-21.

To release the parking brake:
1. Hold the brake pedal down.
2. Pull the parking brake handle up until you can press the release button.
3. Hold the release button in as you move the brake handle all the way down.

Notice: Driving with the parking brake on can overheat the brake system and cause premature wear or damage to brake system parts. Make sure that the parking brake is fully released and the brake warning light is off before driving.

Driving with the parking brake applied will cause a warning chime to sound and the RELEASE PARKING BRAKE message to appear in the DIC. The message will remain on until:

- The parking brake is released.
- The vehicle comes to a stop.
If you are towing a trailer and parking on a hill, see Driving Characteristics and Towing Tips on page 9-62.

Brake Assist

This vehicle has a brake assist feature designed to assist the driver in stopping or decreasing vehicle speed in emergency driving conditions. This feature uses the stability system hydraulic brake control module to supplement the power brake system under conditions where the driver has quickly and forcefully applied the brake pedal in an attempt to quickly stop or slow down the vehicle. The stability system hydraulic brake control module increases brake pressure at each corner of the vehicle until the ABS activates.

Minor brake pedal pulsation or pedal movement during this time is normal and the driver should continue to apply the brake pedal as the driving situation dictates. The brake assist feature will automatically disengage when the brake pedal is released or brake pedal pressure is quickly decreased.

Ride Control Systems

Traction Control System (TCS)

The vehicle has a Traction Control System (TCS) that limits wheel spin. The system utilizes engine and braking controls to control wheel spin during acceleration at all driving speeds for maximum driver control regardless of conditions. When the system senses impending wheel slip during acceleration, it signals the throttle control to reduce drive wheel torque. Under extreme situations, such as going from pavement to ice during acceleration, the system will selectively apply the brakes to maintain control. The system may be heard or felt while it is working, but this is normal.
9-42 Driving and Operating

The TCS/StabiliTrak warning light flashes when the TCS is limiting wheel spin.

The TCS/StabiliTrak warning light comes on solid if there is a problem with the traction control system. See Traction Control System (TCS)/StabiliTrak® Light on page 5-23. If the light stays on, see your dealer for service. When the TCS/StabiliTrak warning light is on, the system will not limit wheel spin. Adjust your driving accordingly.

TCS automatically comes on whenever the vehicle is started. To limit wheel spin, especially in slippery road conditions, the system should always be left on, but it may be necessary to turn the system off if the vehicle is stuck in sand, mud, or snow and rocking the vehicle is required. Also, turn TCS off while in deep snow or on loose gravel, to assist vehicle motion at lower speeds. See If the Vehicle Is Stuck on page 9-13. See also Winter Driving on page 9-11 for information on using TCS when driving in snowy or icy conditions.

To turn the system off, press and release the TCS/StabiliTrak button located on the console in front of the shift lever.

Press and release the TCS/StabiliTrak button and the TCS turns off. The TCS warning light comes on when the TCS is off. Press and release the button again to turn the system back on. For information on turning StabiliTrak off and on, see “StabiliTrak System” following.
StabiliTrak® System

The vehicle has an electronic stability control system called StabiliTrak. It is an advanced computer controlled system that assists with directional control of the vehicle in difficult driving conditions. StabiliTrak activates when the computer senses a discrepancy between the intended path and the direction the vehicle is actually traveling. StabiliTrak selectively applies braking pressure at any one of the vehicle’s brakes to help steer the vehicle in the direction which you are steering.

If cruise control is being used when StabiliTrak activates, the cruise control will automatically disengage. Press the cruise control button to reengage when road conditions allow. See Cruise Control on page 9-50.

The Traction Control System (TCS)/StabiliTrak button is located on the console in front of the shift lever.

When the system activates, the TCS/StabiliTrak warning light flashes on the instrument panel cluster. You may also hear a noise or feel vibration in the brake pedal. This is normal. Continue to steer the vehicle in the intended direction.

If there is a problem detected with StabiliTrak, a SERVICE STABILITRAK message displays on the DIC and the StabiliTrak/TCS warning light on the instrument panel cluster comes on. When this message and warning light display, the system is not operational. Driving should be adjusted accordingly. See Ride Control System Messages on page 5-40 and Traction Control System (TCS)/StabiliTrak® Light on page 5-23.
9-44 Driving and Operating

StabiliTrak comes on automatically whenever the vehicle is started. The system should be left on to help assist with directional control of the vehicle. If StabiliTrak needs to be turned off, press and hold the TCS/StabiliTrak button until the Traction Control Off light and the StabiliTrak Off light come on in the instrument panel cluster. If the system has been turned off, press and release the TCS/StabiliTrak button to turn the system back on.

**Engine Drag Control (EDC)**

EDC improves vehicle stability by sensing if there is a difference in speed between the free rolling front wheels and the rear drive wheels that often occurs when the driver takes their foot off the accelerator pedal on slippery surfaces (snow, ice, etc.). When this is detected, EDC sends more torque to the rear wheels to make sure all four wheels are spinning at similar speeds, making the vehicle more stable.

**Competitive Driving Mode**

Competitive Driving Mode, Performance Traction Management (PTM), and Launch Control are systems designed to allow increased performance while accelerating and/or cornering. This is accomplished by regulating and optimizing the engine, brakes, and suspension performance. These modes are for use at a closed course race track and are not intended for use on public roads. They will not compensate for a driver's inexperience or lack of familiarity with the race track. Drivers who prefer to allow the system to have more control of the engine, brake, and suspension are advised to turn the normal TCS and StabiliTrak systems on.

**Notice:** Do not attempt to shift when the drive wheels are spinning and do not have traction. This may cause damage to the transmission. Damage caused by misuse of the vehicle is not covered by the vehicle warranty. See the warranty book for additional information.
Competitive Driving Mode (SS Only)

Competitive Driving Mode allows full engine power while the StabiliTrak system helps maintain directional control of the vehicle by selective brake application. In this mode, TCS is off and Launch Control is available. Adjust your driving style to account for the available engine power. See “Launch Control” later in this section.

These lights are on when the vehicle is in the Competitive Driving Mode.

This optional handling mode can be selected by pressing the TCS/StabiliTrak button on the console quickly two times. The appropriate message displays in the Driver Information Center (DIC). See Ride Control System Messages on page 5-40 for more information.

When the TCS/StabiliTrak button is pressed again, the TCS and StabiliTrak systems are on. The appropriate message displays briefly in the DIC.

Performance Traction Management (PTM) (ZL1 Only)

PTM integrates the TCS, StabiliTrak, and Selective Ride Control systems to provide improved and consistent performance when cornering. The amount of available engine power is based on the mode selected, track conditions, driver skill, and the radius of each corner.
These lights are on when the vehicle is in the PTM Mode.

This optional handling mode can be selected by pressing the TCS/StabiliTrak button on the console quickly two times. The appropriate message displays in the DIC. See Ride Control System Messages on page 5-40.

To experience the performance benefit of this system, after entering a curve and at the point where the driver would normally start to increase acceleration, the accelerator pedal can be fully pressed. The PTM system will modify the level of engine power for a smooth and consistent corner exit.

To select a mode while in PTM, push the Selective Ride Control/PTM – TOUR or + SPORT button on the center console.

The PTM system contains five modes. These modes are selected by pressing the Selective Ride Control/PTM TOUR – or SPORT + button on the center console. The driver scrolls up or down through modes 1–5 by pressing the TOUR – or SPORT + button.

The following is a DIC display description and the recommended usage of each mode.

**PERF TRACTION 1 – WET / ACTIVE HANDLING ON**

- Intended for all driver skill levels.
- Wet or damp conditions only — not intended for use in heavy rain or standing water.
- StabiliTrak is on and engine power is reduced based on conditions.
PERF TRACTION 2 – DRY / ACTIVE HANDLING ON
- For use by less experienced drivers or while learning a new track.
- Dry conditions only.
- StabiliTrak is on and engine power is slightly reduced based on conditions.

PERF TRACTION 3 – SPORT 1 / ACTIVE HANDLING ON
- For use by drivers who are familiar with the track.
- Requires more driving skill than mode 2.
- Dry conditions only.
- StabiliTrak is on and more engine power is available than in mode 2.

PERF TRACTION 4 – SPORT 2 / ACTIVE HANDLING OFF
- For use by drivers who are familiar with the track.
- Requires more driving skill than modes 2 or 3.
- Dry conditions only.
- StabiliTrak is off and available engine power is available is the same as mode 3.

PERF TRACTION 5 – RACE / ACTIVE HANDLING OFF
- For use by drivers who are familiar with the track.
- Requires more driving skill than in other modes.
- Dry conditions only.
- StabiliTrak is off and available engine power is available for maximum cornering speed.

Use mode 5 for most consistent performance during drag strip use.
When the TCS/StabiliTrak button is pressed again, the vehicle exits PTM mode and the TCS and StabiliTrak systems are on.

Launch Control (V8 with Manual Transmissions Only)
A Launch Control feature is available, within Competitive Driving Mode or PTM, on vehicles with a manual transmission to allow the driver to achieve high levels of vehicle acceleration in a straight line. Launch Control is a form of traction control that manages tire spin while launching the vehicle. This feature is intended for use during closed course race events where consistent zero to sixty and quarter mile times are desirable.
Launch Control is only available when the following criteria are met:

- Competitive Driving Mode is selected or any of the PTM modes are selected.
- The vehicle is not moving.
- The steering wheel is pointing straight.
- The clutch is pressed and the vehicle is in first gear.
- The accelerator pedal is rapidly applied to wide open throttle.

The Launch Control feature will initially limit engine speed as the driver rapidly applies the accelerator pedal to wide open throttle. A smooth, quick release of the clutch, while maintaining the fully pressed accelerator pedal, will manage wheel slip. Complete shifts are described in Manual Transmission on page 9-37.

After the vehicle is launched, the system continues in Competitive Driving Mode or PTM. Competitive Driving Mode, PTM, and Launch Control are systems designed for a closed course race track and not intended for use on public roads. The systems are not intended to compensate for lack of driver experience or familiarity with the race track.

**ZL1 Only**

Use Mode 5 for the most consistent performance during drag strip use.

---

**Limited-Slip Rear Axle**

Vehicles with a limited-slip rear axle can give more traction on snow, mud, ice, sand, or gravel. When traction is low, this feature allows the drive wheel with the most traction to move the vehicle. The limited-slip rear axle also gives the driver enhanced control when cornering hard or completing a maneuver, such as a lane change.
Selective Ride Control

ZL1 Only

The vehicle has a ride control system called Magnetic Selective Ride Control. The system provides the following performance benefits:

- Reduced Impact Harshness
- Improved Road Isolation
- Improved High-Speed Stability
- Improved Handling Response
- Better Control of Body Ride Motions

The Selective Ride buttons are located on the center console. Press to select the suspension of your choice. The indicator light will illuminate the current suspension setting.

TOUR: Use for normal city and highway driving. The TOUR button selects a suspension and Electric Power Steering (EPS) calibration that provides a smooth, soft ride.

SPORT: Use where road conditions or personal preference demand more control. The SPORT button selects a suspension and EPS calibration that provides more “feel,” or response to the road conditions. The setting can be changed at any time. Based on road conditions, steering wheel angle, and the vehicle speed, the system automatically adjusts to provide the best handling while providing a smooth ride. The Tour and Sport modes will feel similar on a smooth road. Select a new setting whenever driving conditions change.

The Selective Ride button indicator lights will not illuminate when any PTM mode is selected. When this mode is selected, pressing the Selective Ride button will change the PTM mode and the suspension setting will be determined automatically. See Competitive Driving Mode on page 9-44.

If a malfunction occurs with the Selective Ride Control system, the appropriate messages will be displayed in the DIC. See Ride Control System Messages on page 5-40.
9-50 Driving and Operating

Cruise Control

With cruise control, the vehicle can maintain a speed of about 40 km/h (25 mph) or more without keeping your foot on the accelerator. Cruise control does not work at speeds below 40 km/h (25 mph).

⚠️ WARNING

Cruise control can be dangerous where you cannot drive safely at a steady speed. So, do not use the cruise control on winding roads or in heavy traffic.

Cruise control can be dangerous on slippery roads. On such roads, fast changes in tire traction can cause excessive wheel slip, and you could lose control. Do not use cruise control on slippery roads.

The cruise control buttons are on the outboard side of the steering wheel.

(On/Off): Use to turn the cruise control system on and off. An indicator light comes on in the instrument panel cluster.

(Cancel): Press to disengage cruise control without erasing the set speed from memory.

RES/+ (Resume/Accelerate): Move the thumbwheel up to make the vehicle resume to a previously set speed or to accelerate to a higher speed.

SET/- (Set/Coast): Move the thumbwheel down to set a speed or to make the vehicle decelerate.

Setting Cruise Control

If is on when not in use, it could get bumped and go into cruise when not desired. Keep the cruise control switch off when cruise is not being used.

1. Press to turn cruise control on.
2. Get to the speed desired.
3. Press the thumbwheel toward SET/- and release it.
4. Take your foot off the accelerator pedal.

When the brakes are applied, the cruise control shuts off.
Resuming a Set Speed
If the cruise control is set at a desired speed and then the brakes are applied, the cruise control is disengaged without erasing the set speed from memory.

The indicator light on the instrument panel cluster goes out when the cruise is no longer engaged. Once the vehicle speed reaches about 40 km/h (25 mph) or more, press the thumbwheel up toward RES/+ briefly on the steering wheel. The vehicle returns to the previous set speed and stays there.

Increasing Speed While Using Cruise Control
If the cruise control system is already activated:
- Press the thumbwheel up toward RES/+ and hold it until the vehicle accelerates to the desired speed, and then release it.
- To increase the speed in small amounts, press the thumbwheel up toward RES/+ briefly and then release it. Each time this is done, the vehicle goes about 1.6 km/h (1 mph) faster.

Reducing Speed While Using Cruise Control
If the cruise control system is already activated:
- Press the thumbwheel toward SET/− and hold until the desired lower speed is reached, then release it.
- To slow down in small amounts, press the thumbwheel toward SET/− briefly. Each time this is done, the vehicle goes about 1.6 km/h (1 mph) slower.

Passing Another Vehicle While Using Cruise Control
Use the accelerator pedal to increase the vehicle speed. When you take your foot off the pedal, the vehicle will slow down to the previous set cruise control speed.

Using Cruise Control on Hills
How well the cruise control works on hills depends upon the vehicle’s speed, load, and the steepness of the hills. When going up steep hills, you might have to step on the accelerator pedal to maintain the vehicle speed. When going downhill, you might have to brake or shift to a lower gear to maintain the vehicle speed. When the brakes are applied the cruise control is disengaged.
9-52 Driving and Operating

Ending Cruise Control
There are three ways to end the cruise control:

- To disengage cruise control, step lightly on the brake pedal or clutch. The indicator light on the instrument panel cluster goes out.
- Press \( \text{\footnotesize \text{\textcopyright}} \) on the steering wheel.
- To turn off cruise control, press \( \text{\footnotesize \text{\textcopyright}} \) on the steering wheel.

Erasing Speed Memory
The cruise control set speed is erased from memory if \( \text{\footnotesize \text{\textcopyright}} \) is pressed or if the vehicle is turned off.

Object Detection Systems

Ultrasonic Parking Assist
For vehicles with the Ultrasonic Rear Parking Assist (URPA) system, it assists the driver with parking and avoiding objects while in R (Reverse). URPA operates at speeds less than 8 km/h (5 mph). The sensors on the rear bumper detect objects up to 2.5 m (8 ft) behind the vehicle, and at least 20 cm (8 in) off the ground.

\[\text{\footnotesize WARNING}\]

The URPA system does not detect pedestrians, bicyclists, animals, or any other objects located below the bumper or that are too close or too far from the vehicle. To prevent injury, death, or vehicle damage, even with URPA, always check the area around the vehicle and check all mirrors before backing.

How the System Works
URPA comes on automatically when the shift lever is moved into R (Reverse). A single tone sounds to indicate the system is working.

URPA operates only at speeds less than 8 km/h (5 mph).

An obstacle is indicated by audible beeps. The interval between the beeps becomes shorter as the vehicle gets closer to the obstacle.
When the distance is less than 30 cm (12 in), the beeping is a continuous tone for five seconds.

To be detected, objects must be at least 20 cm (8 in) off the ground and below trunk level. Objects must also be within 2.5 m (8 ft) from the rear bumper. The distance objects can be detected may be less during warmer or humid weather.

**Turning the System On and Off**

The URPA system can be turned on and off using the infotainment system controls. See *Vehicle Personalization on page 5-46.*

When the system is off, PARK ASSIST OFF displays on the Driver Information Center (DIC). The message disappears after a short period of time.

URPA defaults to the on setting each time the vehicle is started.

---

**When the System Does Not Seem to Work Properly**

The following messages may be displayed on the DIC:

**SERVICE PARKING ASSIST:** If this message occurs, take the vehicle to your dealer to repair the system.

**PARK ASSIST OFF:** If the URPA system does not activate due to a temporary condition, the message displays on the DIC. This can occur under the following conditions:

- The driver has disabled the system.
- The ultrasonic sensors are not clean. Keep the vehicle’s rear bumper free of mud, dirt, snow, ice, and slush. For cleaning instructions, see *Exterior Care on page 10-97.*
- The park assist sensors are covered by frost or ice. Frost or ice can form around and behind the sensors and may not always be seen; this can occur after washing the vehicle in cold weather. The message may not clear until the frost or ice has melted.
- An object was hanging out of the trunk during the last drive cycle. Once the object is removed, URPA will return to normal operation.
- The bumper is damaged. Take the vehicle to your dealer to repair the system.
- Other conditions, such as vibrations from a jackhammer or the compression of air brakes on a very large truck, are affecting system performance.
9-54 Driving and Operating

Rear Vision Camera (RVC)

This vehicle may have an RVC system. Read this entire section before using it.

**WARNING**

The RVC system does not display pedestrians, bicyclists, animals, or any other object located outside the camera's field of view, below the bumper, or under the vehicle.

Do not back the vehicle using only the RVC screen, such as during longer, higher speed backing maneuvers, or where there could be cross-traffic. Perceived distances may be different from actual distances.

(Continued)

**WARNING (Continued)**

Failure to use proper care before backing may result in injury, death, or vehicle damage. Always check before backing by checking behind and around the vehicle.

The rear vision camera system is designed to help the driver when backing up by displaying a view of the area behind the vehicle. When the key is in ON/RUN and the driver shifts the vehicle into R (Reverse), the video image automatically appears on the inside rearview mirror. Once the driver shifts out of R (Reverse), the video image automatically disappears from the inside rearview mirror.

Rear Vision Camera Errors

If the rear vision camera system requires service, a flashing symbol will appear in the inside rearview mirror.

If any other problem occurs or if a problem persists, see your dealer.

Rear Vision Camera Location

The camera is located above the license plate.
Driving and Operating 9-55

The area displayed by the camera is limited. It does not display objects that are close to either corner or under the bumper and can vary depending on vehicle orientation or road conditions. The distance of the image that appears on the screen is different from the actual distance.

The following illustration shows the field of view that the camera provides.

When the System Does Not Seem to Work Properly

The RVC system may not work properly or display a clear image if:

- It is dark.
- The sun or the beam of headlamps are shining directly into the camera lens.
- Ice, snow, mud, or anything else builds up on the camera lens. Clean the lens, rinse it with water, and wipe it with a soft cloth.
- The back of the vehicle is in an accident. The position and mounting angle of the camera can change or the camera can be affected. Be sure to have the camera and its position and mounting angle checked at your dealer.
Fuel

Use of the recommended fuel is an important part of the proper maintenance of this vehicle. To help keep the engine clean and maintain optimum vehicle performance, we recommend the use of gasoline advertised as TOP TIER Detergent Gasoline.

Look for the TOP TIER label on the fuel pump to ensure gasoline meets enhanced detergency standards developed by auto companies. A list of marketers providing TOP TIER Detergent Gasoline can be found at www.toptiergas.com.

Recommended Fuel

If the vehicle has the 3.6L V6 engine (VIN Code 3), use regular unleaded gasoline with a posted octane rating of 87 or higher. If the octane rating is less than 87, an audible knocking noise, commonly referred to as spark knock, might be heard when driving. If this occurs, use a gasoline rated at 87 octane or higher as soon as possible. If heavy knocking is heard when using gasoline rated at 87 octane or higher, the engine needs service.

If the vehicle has the 6.2L V8 engine (VIN Code W) or the 6.2L V8 engine (VIN Code J), use premium unleaded gasoline with a posted octane rating of 91 or higher. For best performance, use premium unleaded gasoline with a posted octane rating of 93. You can also use regular unleaded gasoline rated at 87 octane or higher, but the vehicle's acceleration could be slightly reduced, and a slight audible knocking noise, commonly referred
to as spark knock, might be heard. If the octane rating is less than 87, a heavy knocking noise might be heard when driving. If this occurs, use a gasoline rated at 87 octane or higher as soon as possible. Otherwise, you could damage the engine. If heavy knocking is heard when using gasoline rated at 87 octane or higher, the engine needs service.

**Required Fuel (ZL1 Only)**

If the vehicle has the 6.2L V8 engine (VIN Code P), use premium unleaded gasoline with a posted octane rating of 91 or higher. For best performance, use premium unleaded gasoline with a posted octane rating of 93. You can also use regular unleaded gasoline rated at 87 octane or higher, but the vehicle’s acceleration could be slightly reduced, and a slight audible knocking noise, commonly referred to as spark knock, might be heard. If the octane rating is less than 87, a heavy knocking noise might be heard when driving. If this occurs, use a gasoline rated at 87 octane or higher as soon as possible. Otherwise, you could damage the engine. If heavy knocking is heard when using gasoline rated at 87 octane or higher, the engine needs service.

**Gasoline Specifications (U.S. and Canada Only)**

At a minimum, gasoline should meet ASTM specification D 4814 in the United States or CAN/CGSB-3.5 or 3.511 in Canada. Some gasolines contain an octane-enhancing additive called methylcyclopentadienyl manganese tricarbonyl (MMT). We recommend against the use of gasolines containing MMT. See Fuel Additives on page 9-58 for additional information.

**California Fuel Requirements**

If the vehicle is certified to meet California Emissions Standards, it is designed to operate on fuels that meet California specifications. See the underhood emission control label. If this fuel is not available in states adopting California Emissions Standards, the vehicle will operate satisfactorily on fuels meeting federal specifications, but emission control system performance might be affected. The malfunction indicator lamp could turn on and the vehicle might fail a smog-check test. See Malfunction Indicator Lamp on page 5-18. If this occurs, return to your authorized dealer for diagnosis. If it is determined that the condition is caused by the type of fuel used, repairs might not be covered by the vehicle warranty.
Fuels in Foreign Countries

Never use leaded gasoline or any other fuel not recommended in the previous text on fuel. Costly repairs caused by use of improper fuel would not be covered by the vehicle warranty.

To check the fuel availability, ask an auto club, or contact a major oil company that does business in the country where you will be driving.

Fuel Additives

To provide cleaner air, all gasolines in the United States are now required to contain additives that help prevent engine and fuel system deposits from forming, allowing the emission control system to work properly. In most cases, nothing should have to be added to the fuel. However, some gasolines contain only the minimum amount of additive required to meet U.S. Environmental Protection Agency regulations. To help keep fuel injectors and intake valves clean and avoid problems due to dirty injectors or valves, look for gasoline that is advertised as TOP TIER Detergent Gasoline. Look for the TOP TIER label on the fuel pump to ensure gasoline meets enhanced detergency standards developed by the auto companies. A list of marketers providing TOP TIER Detergent Gasoline can be found at www.toptiergas.com.

For customers who do not use TOP TIER Detergent Gasoline regularly, one bottle of GM Fuel System Treatment PLUS, added to the fuel tank at every engine oil change, can help clean deposits from fuel injectors and intake valves. GM Fuel System Treatment PLUS is the only gasoline additive recommended by General Motors. It is available at your dealer.

Gasolines containing oxygenates, such as ethers and ethanol, and reformulated gasolines might be available in your area. We recommend that you use these gasolines, if they comply with the specifications described earlier. However, E85 (85% ethanol) and other fuels containing more than 15% ethanol must not be used in vehicles that were not designed for those fuels.

Notice: This vehicle was not designed for fuel that contains methanol. Do not use fuel containing methanol. It can corrode metal parts in the fuel system and also damage plastic and rubber parts. That damage would not be covered under the vehicle warranty.
Some gasolines that are not reformulated for low emissions can contain an octane-enhancing additive called methylcyclopentadienyl manganese tricarbonyl (MMT); ask the attendant where you buy gasoline whether the fuel contains MMT. We recommend against the use of such gasolines. Fuels containing MMT can reduce spark plug life and affect emission control system performance. The malfunction indicator lamp might turn on. If this occurs, return to your dealer for service.

**WARNING**

Fuel vapor burns violently and a fuel fire can cause bad injuries. To help avoid injuries to you and others, read and follow all the instructions on the fuel pump island. Turn off the engine when refueling. Do not smoke near fuel or when refueling the vehicle. Do not use cellular phones. Keep sparks, flames, and smoking materials away from fuel. Do not leave the fuel pump unattended when refueling the vehicle. This is against the law in some places. Do not re-enter the vehicle while pumping fuel. Keep children away from the fuel pump; never let children pump fuel.

Filling the Tank

The fuel cap is located behind a hinged fuel door on the passenger side of the vehicle. To open the fuel door, push the rearward center edge in and release; it will open.

To unlock the fuel cap on vehicles equipped with the locking fuel cap, use the key that is part of the Remote Keyless Entry (RKE) transmitter.

When reinstalling the cap, turn it clockwise until it clicks, otherwise the malfunction indicator lamp may turn on. See *Malfunction Indicator Lamp on page 5-18*. 
## 9-60 Driving and Operating

| **WARNING** | Be careful not to spill fuel. Do not top off or overfill the tank and wait a few seconds after you have finished pumping before removing the nozzle. Clean fuel from painted surfaces as soon as possible. See Exterior Care on page 10-97.

When replacing the fuel cap, turn it clockwise until it clicks. Make sure the cap is fully installed. The diagnostic system can determine if the fuel cap has been left off or improperly installed. This would allow fuel to evaporate into the atmosphere. See Malfunction Indicator Lamp on page 5-18. |

<tr>
<td><strong>WARNING</strong></td>
<td>If a fire starts while you are refueling, do not remove the nozzle. Shut off the flow of fuel by shutting off the pump or by notifying the station attendant. Leave the area immediately.</td>

**Notice:** If a new fuel cap is needed, be sure to get the right type of cap from your dealer. The wrong type of fuel cap might not fit properly, might cause the malfunction indicator lamp to light, and could damage the fuel tank and emissions system. See Malfunction Indicator Lamp on page 5-18.
Filling a Portable Fuel Container

**WARNING**

Never fill a portable fuel container while it is in the vehicle. Static electricity discharge from the container can ignite the fuel vapor. You can be badly burned and the vehicle damaged if this occurs. To help avoid injury to you and others:

- Dispense fuel only into approved containers.
- Do not fill a container while it is inside a vehicle, in a vehicle’s trunk, pickup bed, or on any surface other than the ground.

(Continued)

**WARNING (Continued)**

- Bring the fill nozzle in contact with the inside of the fill opening before operating the nozzle. Contact should be maintained until the filling is complete.
- Do not smoke while pumping fuel.
- Do not use a cellular phone while pumping fuel.

---

**Towing**

**General Towing Information**

Only use towing equipment that has been designed for the vehicle. Contact your dealer or trailer dealer for assistance with preparing the vehicle for towing a trailer.

See the following trailer towing information in this section:

- For information on driving while towing a trailer, see “Driving Characteristics and Towing Tips.”
- For maximum vehicle and trailer weights, see “Trailer Towing.”
- For information on equipment to tow a trailer, see “Towing Equipment.”
9-62 Driving and Operating

For information on towing a disabled vehicle, see *Towing the Vehicle on page 10-96*. For information on towing the vehicle behind another vehicle such as a motor home, see *Recreational Vehicle Towing on page 10-96*.

Driving Characteristics and Towing Tips

**WARNING**

The driver can lose control when pulling a trailer if the correct equipment is not used or the vehicle is not driven properly. For example, if the trailer is too heavy, the brakes may not work well — or even at all. The driver and passengers could be seriously injured. The vehicle may also be damaged; the resulting repairs would not be covered by the vehicle warranty. Pull a trailer only if all the steps in this section (Continued) have been followed. Ask your dealer for advice and information about towing a trailer with the vehicle.

The following information has important trailering tips and rules for your safety and that of your passengers. Read this section carefully before pulling a trailer.

**Pulling a Trailer**

Here are some important points:

- There are many laws, including speed limit restrictions, that apply to trailering. Check for legal requirements with state or provincial police.
- Do not tow a trailer at all during the first 1,600 km (1,000 mi) the new vehicle is driven. The engine, axle or other parts could be damaged.
- During the first 800 km (500 mi) that a trailer is towed, do not drive over 80 km/h (50 mph) and do not make starts at full throttle. This reduces wear on the vehicle.

The vehicle can tow a trailer if it is equipped with the proper trailer towing equipment. To identify the trailering capacity of the vehicle, see *Trailer Towing (Except ZL1) on page 9-66* or *Trailer Towing (ZL1) on page 9-66*. Trailering changes handling, acceleration, braking, durability, and fuel economy. With the added weight, the engine, transmission, wheel assemblies, and tires are forced to work harder and under greater loads. The trailer also adds wind resistance, increasing the pulling requirements. For safe trailering, correctly use the proper trailering equipment.
Driving with a Trailer

Towing a trailer requires experience. Get familiar with handling and braking with the added trailer weight. The vehicle is now longer and not as responsive as the vehicle is by itself.

Check all trailer hitch parts and attachments, safety chains, electrical connectors, lamps, tires, and mirror adjustments. If the trailer has electric brakes, start the vehicle and trailer moving and then apply the trailer brake controller by hand to be sure the brakes are working.

During the trip, check regularly to be sure that the load is secure, and the lamps and trailer brakes are working properly.

Towing with a Stability Control System

When towing, the sound of the stability control system might be heard. The system is reacting to the vehicle movement caused by the trailer, which mainly occurs during cornering. This is normal when towing heavier trailers.

Following Distance

Stay at least twice as far behind the vehicle ahead as you would when driving the vehicle without a trailer. This can help to avoid situations that require heavy braking and sudden turns.

Passing

More passing distance is needed when towing a trailer. Because the rig is longer, it is necessary to go much farther beyond the passed vehicle before returning to the lane.
9-64  Driving and Operating

Back up

Hold the bottom of the steering wheel with one hand. Then, to move the trailer to the left, move that hand to the left. To move the trailer to the right, move your hand to the right. Always back up slowly and, if possible, have someone guide you.

Making Turns

Notice: Making very sharp turns while trailering could cause the trailer to come in contact with the vehicle. The vehicle could be damaged. Avoid making very sharp turns while trailering.

When turning with a trailer, make wider turns than normal. Do this so the trailer won’t strike soft shoulders, curbs, road signs, trees or other objects. Avoid jerky or sudden maneuvers. Signal well in advance.

Turn Signals when Towing a Trailer

The arrows on the instrument panel flash whenever signaling a turn or lane change. Properly hooked up, the trailer lamps also flash, telling other drivers the vehicle is turning, changing lanes, or stopping.

When towing a trailer, the arrows on the instrument panel flash for turns even if the bulbs on the trailer are burned out. For this reason you may think other drivers are seeing the signal when they are not. It is important to check occasionally to be sure the trailer bulbs are still working.

Driving on Grades

Reduce speed and shift to a lower gear before starting down a long or steep downgrade. If the transmission is not shifted down, the brakes might have to be used so much that they would get hot and no longer work well. Vehicles with automatic transmissions can tow in D (Drive), but M (Manual Mode) is recommended. See “Manual Mode” in Automatic Transmission on page 9-30 for more information. Use a lower gear if the transmission shifts too often. For vehicles with a manual transmission, it is better not to use the highest gear.

When towing at high altitude on steep uphill grades, consider the following: Engine coolant will boil at a lower temperature than at normal altitudes. If the engine is turned off immediately after towing at high altitude on steep uphill grades, the vehicle may show signs similar to engine overheating. To avoid this, let the engine run while parked, preferably on level ground, with the automatic transmission in P (Park) for a few minutes before turning the engine off. For vehicles with manual transmissions, let the engine run while parked, preferably on level ground, with the transmission out of gear and the parking brake applied,
for a few minutes before turning the engine off. If the overheat warning comes on, see Engine Overheating on page 10-30.

Parking on Hills

⚠️ WARNING

Parking the vehicle on a hill with the trailer attached can be dangerous. If something goes wrong, the rig could start to move. People can be injured, and both the vehicle and the trailer can be damaged. When possible, always park the rig on a flat surface.

If parking the rig on a hill:

1. Press the brake pedal, but do not shift into P (Park) yet for vehicles with an automatic transmission, or into gear for vehicles with a manual transmission. Turn the wheels into the curb if facing downhill or into traffic if facing uphill.

2. Have someone place chocks under the trailer wheels.

3. When the wheel chocks are in place, release the brake pedal until the chocks absorb the load.

4. Reapply the brake pedal. Then apply the parking brake and shift into P (Park) for vehicles with an automatic transmission or into gear for vehicles with a manual transmission.

5. Release the brake pedal.

Leaving After Parking on a Hill

1. Apply and hold the brake pedal while you:
   • start the engine,
   • shift into a gear, and
   • release the parking brake.

2. Let up on the brake pedal.

3. Drive slowly until the trailer is clear of the chocks.

4. Stop and have someone pick up and store the chocks.

Maintenance when Trailer Towing

The vehicle needs service more often when pulling a trailer. See this manual's Maintenance Schedule or Index for more information. Things that are especially important in trailer operation are automatic transmission fluid, engine oil, axle lubricant, belts, cooling system, and brake system. It is a good idea to inspect these before and during the trip.

Check periodically to see that all hitch nuts and bolts are tight.

Engine Cooling when Trailer Towing

The cooling system may temporarily overheat during severe operating conditions. See Engine Overheating on page 10-30.
9-66 Driving and Operating

Trailer Towing (ZL1)
The vehicle is neither designed nor intended to tow a trailer.

Trailer Towing (Except ZL1)
Before pulling a trailer, there are three important considerations that have to do with weight:

• The weight of the trailer.
• The weight of the trailer tongue.
• The total weight on your vehicle’s tires.

Weight of the Trailer
How heavy can a trailer safely be?
It should never weigh more than 454 kg (1,000 lbs). But even that can be too heavy.

It depends on how the rig is used. For example, speed, altitude, road grades, outside temperature, and how much the vehicle is used to pull a trailer are all important. It can depend on any special equipment on the vehicle, and the amount of tongue weight the vehicle can carry. See “Weight of the Trailer Tongue” later in this section for more information.

Maximum trailer weight is calculated assuming only the driver is in the tow vehicle and it has all the required trailering equipment. The weight of additional optional equipment, passengers and cargo in the tow vehicle must be subtracted from the maximum trailer weight.

Weight of the Trailer Tongue
The tongue load (A) of any trailer is an important weight to measure because it affects the total gross weight of the vehicle. The Gross Vehicle Weight (GVW) includes the curb weight of the vehicle, any cargo carried in it, and the people who will be riding in the vehicle. If there are a lot of options, equipment, passengers or cargo in the vehicle, it will reduce the tongue weight the vehicle can carry, which will also reduce the trailer weight the vehicle can tow. If towing a trailer, the tongue load must be added to the GVW because the vehicle will be carrying that weight, too. See Vehicle Load Limits on page 9-14 for more information about the vehicle’s maximum load capacity.

Ask your dealer for our trailering information or advice, or you can write us at our Customer Assistance Offices. See Customer Assistance Offices (U.S. and Canada) on page 13-5 or Customer Assistance Offices (Mexico) on page 13-5 for more information.
The trailer tongue (A) should weigh 10 to 15 percent of the total loaded trailer weight (B).

After loading the trailer, weigh the trailer and then the tongue, separately, to see if the weights are proper. If they aren't, adjustments might be made by moving some items around in the trailer.

**Total Weight on Your Vehicle's Tires**

Be sure the vehicle's tires are inflated to the upper limit for cold tires. These numbers can be found on the Tire and Loading Information label. See *Vehicle Load Limits on page 9-14*. Make sure not to go over the GVW limit for the vehicle, including the weight of the trailer tongue.

**Towing Equipment**

**Hitches**

Use the correct hitch equipment. See your dealer or a hitch dealer for assistance.

- The rear bumper on the vehicle is not intended for hitches. Do not attach rental hitches or other bumper-type hitches to it. Use only a frame-mounted hitch that does not attach to the bumper.

- Will any holes be made in the body of the vehicle when the trailer hitch is installed? If there are, seal the holes when the hitch is removed. If the holes are not sealed, dirt, water, and deadly carbon monoxide (CO) from the exhaust can get into the vehicle. See *Engine Exhaust on page 9-29*.

**Safety Chains**

Always attach chains between the vehicle and the trailer. Cross the safety chains under the tongue of the trailer to help prevent the tongue from contacting the road if it becomes separated from the hitch. Leave enough slack so the rig can turn. Never allow safety chains to drag on the ground.
9-68 Driving and Operating

Trailer Brakes
Does the trailer have its own brakes? Be sure to read and follow the instructions for the trailer brakes so they are installed, adjusted, and maintained properly.
Because the vehicle has antilock brakes, do not tap into the vehicle's brake system. If this is done, both brake systems will not work well, or at all.

Conversions and Add-Ons

Add-On Electrical Equipment

Notice: Do not add anything electrical to the vehicle unless you check with your dealer first. Some electrical equipment can damage the vehicle and the damage would not be covered by the vehicle's warranty. Some add-on electrical equipment can keep other components from working as they should.
Add-on equipment can drain the vehicle's 12-volt battery, even if the vehicle is not operating.

The vehicle has an airbag system. Before attempting to add anything electrical to the vehicle, see Servicing the Airbag-Equipped Vehicle on page 3-30 and Adding Equipment to the Airbag-Equipped Vehicle on page 3-30.

California Proposition 65 Warning
Most motor vehicles, including this one, contain and/or emit chemicals known to the State of California to cause cancer and birth defects or other reproductive harm. Engine exhaust, many parts and systems, many fluids, and some component wear by-products contain and/or emit these chemicals.

California Perchlorate Materials Requirements
Certain types of automotive applications, such as airbag initiators, safety belt pretensioners, and lithium batteries contained in Remote Keyless Entry transmitters, may contain perchlorate materials. Special handling may be necessary. For additional information, see www.dtsc.ca.gov/hazardouswaste/perchlorate.

Accessories and Modifications

Adding non-dealer accessories or making modifications to the vehicle can affect vehicle performance and safety, including such things as airbags, braking, stability, ride and handling, emissions systems, aerodynamics, durability, and electronic systems like antilock brakes, traction control, and stability control. These accessories or modifications could even cause malfunction or damage not covered by the vehicle warranty.

Damage to vehicle components resulting from modifications or the installation or use of non-GM certified parts, including control module or software modifications, is not covered under the terms of the vehicle warranty and may affect remaining warranty coverage for affected parts.

GM Accessories are designed to complement and function with other systems on the vehicle. See your dealer to accessorize the vehicle using genuine GM Accessories installed by a dealer technician.

Also, see Adding Equipment to the Airbag-Equipped Vehicle on page 3-30.

Doing Your Own Service Work

**WARNING**

It can be dangerous to work on your vehicle if you do not have the proper knowledge, service manual, tools, or parts. Always follow owner manual procedures and consult the service manual for your vehicle before doing any service work.

If doing some of your own service work, use the proper service manual. It tells you much more about how to service the vehicle than this manual can. To order the proper service manual, see Service Publications Ordering Information on page 13-18.
This vehicle has an airbag system. Before attempting to do your own service work, see Servicing the Airbag-Equipped Vehicle on page 3-30.

Keep a record with all parts receipts and list the mileage and the date of any service work performed. See Maintenance Records on page 11-15.

Hood

To open the hood:

1. Pull the release handle located below the instrument panel to the left of the steering wheel.

2. Pull up on the secondary hood release. The lever is located near the middle of the hood.

3. Lift the hood.

Before closing the hood, be sure all filler caps are on properly. Then lift the hood to relieve pressure. Pull the hood down on the passenger side to close it firmly.

Engine Oil

To ensure proper engine performance and long life, careful attention must be paid to engine oil. Following these simple, but important steps will help protect your investment:

- Always use engine oil approved to the proper specification and of the proper viscosity grade. See “Selecting the Right Engine Oil” in this section.
- Check the engine oil level regularly and maintain the proper oil level. See “Checking Engine Oil” and “When to Add Engine Oil” in this section.
- Change the engine oil at the appropriate time. See Engine Oil Life System on page 10-16.
- Always dispose of engine oil properly. See “What to Do with Used Oil” in this section.

Checking Engine Oil

It is a good idea to check the engine oil level at each fuel fill. In order to get an accurate reading, the vehicle must be on level ground. The engine oil dipstick handle is a yellow loop. See Engine Compartment Overview on page 10-6 for the location of the engine oil dipstick.

Obtaining an accurate oil level reading is essential:

1. If the engine has been running recently, turn off the engine and allow several minutes for the oil to drain back into the oil pan. Checking the oil level too soon after engine shutoff will not provide an accurate oil level reading.

2. Pull out the dipstick and clean it with a paper towel or cloth, then push it back in all the way. Remove it again, keeping the tip down, and check the level.
10-14 Vehicle Care

When to Add Engine Oil

If the oil is below the cross-hatched area at the tip of the dipstick, add 1 L (1 qt) of the recommended oil and then recheck the level. See “Selecting the Right Engine Oil” in this section for an explanation of what kind of oil to use. For engine oil crankcase capacity, see Capacities and Specifications on page 12-2.

Notice: Do not add too much oil. Oil levels above or below the acceptable operating range shown on the dipstick are harmful to the engine. If you find that you have an oil level above the operating range, i.e., the engine has so much oil that the oil level gets above the cross-hatched area that shows the proper operating range, the engine could be damaged. You should drain out the excess oil or limit driving of the vehicle and seek a service professional to remove the excess amount of oil.

See Engine Compartment Overview on page 10-6 for the location of the engine oil fill cap.

Add enough oil to put the level somewhere in the proper operating range. Push the dipstick all the way back in when through.

Selecting the Right Engine Oil

Selecting the right engine oil depends on both the proper oil specification and viscosity grade. See Recommended Fluids and Lubricants on page 11-12.

Specification

Use and ask for licensed engine oils with the dexos1® approved certification mark. Engine oils meeting the requirements for the vehicle should have the dexos1 approved certification mark. This certification mark indicates that the oil has been approved to the dexos1 specification.
**Notice:** Failure to use the recommended engine oil or equivalent can result in engine damage not covered by the vehicle warranty. Check with your dealer or service provider on whether the oil is approved to the dexos1 specification.

**Viscosity Grade**
SAE 5W-30 is the best viscosity grade for the vehicle. Do not use other viscosity grade oils such as SAE 10W-30, 10W-40, or 20W-50.

If in an area of extreme cold, where the temperature falls below –20°F (–29°C), an SAE 0W-30 oil should be used. An oil of this viscosity grade will provide easier cold starting for the engine at extremely low temperatures. When selecting an oil of the appropriate viscosity grade, always select an oil that meets the dexos1 specification or equivalent. See “Specification” for more information.

**Engine Oil Additives/Engine Oil Flushes**
Do not add anything to the oil. The recommended oils with the dexos specification and displaying the dexos certification mark are all that is needed for good performance and engine protection.

Engine oil system flushes are not recommended and could cause engine damage not covered by the vehicle warranty.

**What to Do with Used Oil**
Used engine oil contains certain elements that can be unhealthy for your skin and could even cause cancer. Do not let used oil stay on your skin for very long. Clean your skin and nails with soap and water, or a good hand cleaner. Wash or properly dispose of clothing or rags containing used engine oil. See the manufacturer’s warnings about the use and disposal of oil products.

Used oil can be a threat to the environment. If you change your own oil, be sure to drain all the oil from the filter before disposal. Never dispose of oil by putting it in the trash or pouring it on the ground, into sewers, or into streams or bodies of water. Recycle it by taking it to a place that collects used oil.
10-16 Vehicle Care

Engine Oil Life System

When to Change Engine Oil

This vehicle has a computer system that indicates when to change the engine oil and filter. This is based on a combination of factors which include engine revolutions, engine temperature, and miles driven. Based on driving conditions, the mileage at which an oil change is indicated can vary considerably. For the oil life system to work properly, the system must be reset every time the oil is changed.

When the system has calculated that oil life has been diminished, it indicates that an oil change is necessary. A CHANGE ENGINE OIL SOON message comes on. See Engine Oil Messages on page 5-38. Change the oil as soon as possible within the next 1,000 km (600 mi).

It is possible that, if driving under the best conditions, the oil life system might indicate that an oil change is not necessary for up to a year. The engine oil and filter must be changed at least once a year and, at this time, the system must be reset. Your dealer has trained service people who will perform this work and reset the system. It is also important to check the oil regularly over the course of an oil drain interval and keep it at the proper level.

If the system is ever reset accidentally, the oil must be changed at 5,000 km (3,000 mi) since the last oil change. Remember to reset the oil life system whenever the oil is changed.

How to Reset the Engine Oil Life System

Reset the system whenever the engine oil is changed so that the system can calculate the next engine oil change. To reset the system:

1. Turn the ignition to ON/RUN with the engine off.
2. Fully press and release the accelerator pedal three times within five seconds.

The system is reset when the CHANGE ENGINE OIL SOON message goes off.

If the CHANGE ENGINE OIL SOON message comes back on when the vehicle is started, the engine oil life system has not been reset. Repeat the procedure.
Automatic Transmission Fluid

How to Check Automatic Transmission Fluid

It is not necessary to check the transmission fluid level. A transmission fluid leak is the only reason for fluid loss. If a leak occurs, take the vehicle to your dealer and have it repaired as soon as possible.

The vehicle is not equipped with a transmission fluid level dipstick. There is a special procedure for checking and changing the transmission fluid. Because this procedure is difficult, this should be done at the dealer. Contact the dealer for additional information or the procedure can be found in the service manual. To purchase a service manual, see Service Publications Ordering Information on page 13-18.

Change the fluid and filter at the intervals listed in Maintenance Schedule on page 11-3, and be sure to use the fluid listed in Recommended Fluids and Lubricants on page 11-12.

Manual Transmission Fluid

It is not necessary to check the manual transmission fluid level. A transmission fluid leak is the only reason for fluid loss. If a leak occurs, take the vehicle to your dealer and have it repaired as soon as possible. See Recommended Fluids and Lubricants on page 11-12 for the proper fluid to use.

Hydraulic Clutch

For vehicles with a manual transmission, it is not necessary to regularly check brake/clutch fluid unless there is a leak suspected. Adding fluid will not correct a leak. A fluid loss in this system could indicate a problem. Have the system inspected and repaired.

When to Check and What to Use

The brake/hydraulic clutch fluid reservoir cap has this symbol on it. The common hydraulic clutch and brake master cylinder fluid reservoir is filled with DOT 3 brake fluid as indicated on the reservoir cap. See Engine Compartment Overview on page 10-6 for reservoir location.
10-18 Vehicle Care

How to Check and Add Fluid
Visually check the brake/clutch fluid reservoir to make sure the fluid level is at the MIN (minimum) line on the side of the reservoir. The brake/hydraulic clutch fluid system should be closed and sealed.

Do not remove the cap to check the fluid level or to top-off the fluid level. Remove the cap only when necessary to add the proper fluid until the level reaches the MIN line.

Engine Air Cleaner/Filter (Except ZL1)
See Engine Compartment Overview on page 10-6 for the location of the engine air cleaner/filter.

When to Inspect the Engine Air Cleaner/Filter
Inspect the air cleaner/filter at the scheduled maintenance intervals and replace it at the appropriate interval. See Maintenance Schedule on page 11-3 for more information.

3.6L V6 Engine Air Cleaner/Filter Housing Shown (6.2L V8 Engines Similar)

If driving in dusty/dirty conditions, inspect the filter at each engine oil change.

How to Inspect the Engine Air Cleaner/Filter
To inspect the air cleaner/filter, remove the filter from the vehicle and lightly shake the filter to release loose dust and dirt. If the filter remains covered with dirt, a new filter is required.

To inspect or replace the engine air cleaner/filter:
1. Open the hood. See Hood on page 10-5.
2. Locate the air filter housing on the front of the driver side of the engine compartment. See Engine Compartment Overview on page 10-6.
3. Loosen the clamp at the duct of the air cleaner/filter housing.

4. Unlatch the retaining clips on the air cleaner/filter housing.

5. Lift the cover at the retaining clip location high enough to clear the retaining clips and pull the cover outward to remove it from the air cleaner/filter housing hinges.

6. Pull straight up on the cover; while holding the cover, remove the air filter.

7. Inspect or replace the air filter. See Maintenance Replacement Parts on page 11-14.

8. Reverse Steps 1–6 to reinstall the cover.

**WARNING**

Operating the engine with the air cleaner/filter off can cause you or others to be burned. The air cleaner not only cleans the air; it helps to stop flames if the engine backfires. Use caution when working on the engine and do not drive with the air cleaner/filter off.

**Notice:** If the air cleaner/filter is off, dirt can easily get into the engine, which could damage it. Always have the air cleaner/filter in place when you are driving.

**Engine Air Cleaner/Filter (ZL1 Only)**

See Engine Compartment Overview on page 10-6 for the location of the engine air cleaner/filter.

**When to Inspect the Engine Air Cleaner/Filter**

Inspect the air cleaner/filter at the scheduled maintenance intervals and replace it at the appropriate interval. See Maintenance Schedule on page 11-3 for more information. If driving in dusty/dirty conditions, inspect the filter at each engine oil change.

**How to Inspect the Engine Air Cleaner/Filter**

To inspect the air cleaner/filter, remove the filter from the vehicle and lightly shake the filter to release loose dust and dirt. If the filter remains covered with dirt, a new filter is required.
10-20 Vehicle Care

To inspect or replace the engine air cleaner/filter:

1. Open the hood. See Hood on page 10-5.
2. Disconnect the outlet duct by loosening the screw on the air duct clamp.
3. Remove the two screws securing the cover on the air cleaner/filter housing.
4. Pull straight up on the cover; while holding the cover, remove the air filter.
5. Inspect or replace the air filter. See Maintenance Replacement Parts on page 11-14.
6. Reverse Steps 2–5 to reinstall the cover.

**WARNING**

Operating the engine with the air cleaner/filter off can cause you or others to be burned. The air cleaner not only cleans the air; it helps to stop flames if the engine backfires. Use caution when working on the engine and do not drive with the air cleaner/filter off.

**Notice:** If the air cleaner/filter is off, dirt can easily get into the engine, which could damage it. Always have the air cleaner/filter in place when you are driving.

### Cooling System (Except ZL1 Engines)

When it is safe to lift the hood:

3.6L V6 Engine
6.2L V8 Engines (L99 Shown, LS3 Similar)

A. Engine Coolant Recovery Bottle
B. Electric Cooling Fans (Out of View)
C. Radiator Cap (Out of View)

⚠️ WARNING

An electric engine cooling fan under the hood can start up even when the engine is not running and can cause injury. Keep hands, clothing, and tools away from any underhood electric fan.

If the coolant inside the engine coolant recovery bottle is boiling, do not do anything else until it cools down. The vehicle should be parked on a level surface.

The coolant level should be between the MIN and MAX lines. If it is not, the vehicle may have a leak at the radiator hoses, heater hoses, radiator, water pump, or somewhere else in the cooling system.

⚠️ WARNING

Heater and radiator hoses, and other engine parts, can be very hot. Do not touch them. If you do, you can be burned.

Do not run the engine if there is a leak. If you run the engine, it could lose all coolant. That could cause an engine fire, and you could be burned. Get any leak fixed before you drive the vehicle.

If there seems to be no leak, with the engine on, check to see if the electric engine cooling fans are running. If the engine is overheating, the fans should be running. If it is not, the vehicle needs service. Turn off the engine.
**Notice:** Using coolant other than DEX-COOL® can cause premature engine, heater core, or radiator corrosion. In addition, the engine coolant could require changing sooner, at 50,000 km (30,000 mi) or 24 months, whichever occurs first. Any repairs would not be covered by the vehicle warranty. Always use DEX-COOL (silicate-free) coolant in the vehicle.

Always use DEX-COOL (silicate-free) coolant in the vehicle.

**Cooling System (Intercooler)**

**Intercooler ZL1 Only**

The 6.2L LSA supercharged V8 engine has an intercooler cooling system.

1. Open the hood and remove the engine cover. See *Engine Cover on page 10-11*.

2. Turn the intercooler fill neck (B) to the vertical position.
3. Remove the intercooler fill cap (A).

4. Check to see if coolant is visible near the top of the opening.

5. If coolant is not visible, see dealer for service.

6. Reverse Steps 1–3 to install intercooler fill cap and turn the intercooler fill neck.

The intercooler cooling system has a special procedure for draining and adding coolant. Because this procedure is difficult, see the dealer for service if the intercooler is low on coolant. The procedure can also be found in the service manual. To purchase a service manual, see Service Publications Ordering Information on page 13-18.

**Engine Coolant**

The cooling system in the vehicle is filled with DEX-COOL® engine coolant. This coolant is designed to remain in the vehicle for 5 years or 240 000 km (150,000 mi), whichever occurs first.

The following explains the cooling system and how to check and add coolant when it is low. If there is a problem with engine overheating, see Engine Overheating on page 10-30.

**What to Use**

- **WARNING**

Adding only plain water or some other liquid to the cooling system can be dangerous. Plain water and other liquids can boil before the proper coolant mixture will. The coolant warning system is set for the proper coolant mixture. With plain water or the wrong mixture, the engine could get too hot but you would not get the overheat warning. The engine could catch fire and you or others could be burned. Use a 50/50 mixture of clean, drinkable water and DEX-COOL coolant.
Use a 50/50 mixture of clean, drinkable water and DEX-COOL coolant. If using this mixture, nothing else needs to be added. This mixture:

- Gives freezing protection down to −37°C (−34°F), outside temperature.
- Gives boiling protection up to 129°C (265°F), engine temperature.
- Protects against rust and corrosion.
- Will not damage aluminum parts.
- Helps keep the proper engine temperature.

Notice: If an improper coolant mixture is used, the engine could overheat and be badly damaged. The repair cost would not be covered by the vehicle warranty. Too much water in the mixture can freeze and crack the engine, radiator, heater core, and other parts.

Never dispose of engine coolant by putting it in the trash, pouring it on the ground, or into sewers, streams, or bodies of water. Have the coolant changed by an authorized service center, familiar with legal requirements regarding used coolant disposal. This will help protect the environment and your health.

Checking Coolant

The vehicle must be on a level surface when checking the coolant level.

Check coolant as follows:

1. Turn the ignition off.
2. Locate the engine coolant recovery bottle. See Engine Compartment Overview on page 10-6.
3. Turn the coolant dipstick cap counterclockwise and slowly pull out the dipstick.
4. There are maximum and minimum markings on the dipstick. When the engine is cold, the coolant level should be at or above the MIN mark on the dipstick. After the vehicle has been driven and the engine is at normal operating temperature, the level should be somewhere between half full and the maximum mark.

5. If the coolant level is correct, replace the dipstick and turn the cap clockwise to secure.

How to Add Coolant to the Coolant Recovery Bottle

**WARNING**

You can be burned if you spill coolant on hot engine parts. Coolant contains ethylene glycol and it will burn if the engine parts are hot enough. Do not spill coolant on a hot engine.

Notice: This vehicle has a specific coolant fill procedure. Failure to follow this procedure could cause the engine to overheat and be severely damaged.

*Notice:* If an improper coolant mixture is used, the engine could overheat and be badly damaged. The repair cost would not be covered by the vehicle warranty. Too much water in the mixture can freeze and crack the engine, radiator, heater core, and other parts.

Add coolant as follows:

1. Turn the engine coolant recovery bottle dipstick cap counterclockwise and slowly pull out the dipstick.
2. Pour the coolant into the engine coolant recovery bottle.
3. When the level is correct, replace the dipstick and turn the cap clockwise to secure.
How to Add Coolant to the Radiator

⚠️ WARNING
You can be burned if you spill coolant on hot engine parts. Coolant contains ethylene glycol and it will burn if the engine parts are hot enough. Do not spill coolant on a hot engine.

Notice: This vehicle has a specific coolant fill procedure. Failure to follow this procedure could cause the engine to overheat and be severely damaged.

⚠️ WARNING
An electric engine cooling fan under the hood can start up even when the engine is not running and can cause injury. Keep hands, clothing, and tools away from any underhood electric fan.

⚠️ WARNING
Steam and scalding liquids from a hot cooling system can blow out and burn you badly. They are under pressure, and if you turn the surge tank pressure cap — even a little — they can come out at high speed. Never turn the cap when the cooling system, including the surge tank pressure cap, is hot. Wait for the cooling system and surge tank pressure cap to cool if you ever have to turn the pressure cap.

If coolant is needed, add the proper mixture directly to the radiator, but be sure the cooling system is cool before this is done.

If no coolant is visible in the engine coolant recovery bottle, add coolant as follows:

3.6L V6 Engine Fill Procedure
1. Locate the radiator cap. See Engine Compartment Overview on page 10-6.
2. Remove the engine cover to access the radiator cap. See Engine Cover on page 10-11.
3. Cover the radiator cap with a thick cloth and turn it slowly counterclockwise and remove.
4. If there is no coolant visible or the level is low, slowly fill the system through the radiator cap opening with a 50/50 mixture of DEX-COOL and clean drinkable water.
   Wait 30 seconds for coolant to settle and continue filling if the level drops.
   Do not spill coolant on the accessory drive belts.
   If a spill occurs, rinse the belt with fresh water.
5. Start the engine.
6. With the engine idling, continue to add coolant through the radiator cap opening until full.
   Wait 30 seconds for the coolant to settle and top off, if the level drops.
7. Once the system is full, put the radiator cap back on by turning clockwise.
8. With the engine still running, raise the engine to 2500 rpm for 30–40 seconds.
9. Turn the engine off.
10. Repeat Steps 2–7 then turn the engine off.
11. Allow engine to cool for 45 minutes. Top off coolant through the radiator cap opening and reinstall the radiator cap.
12. Reinstall the engine cover. See Engine Cover on page 10-11.
13. Check the coolant level in the engine coolant recovery bottle and fill it until the level is at the top symbol on the dipstick.
6.2L V8 Engine Fill Procedure

1. Locate the radiator cap. See Engine Compartment Overview on page 10-6.

2. Cover the radiator cap with a thick cloth and turn it slowly counterclockwise and remove.

3. If there is no coolant visible or the level is low, slowly fill the system through the radiator cap opening with a 50/50 mixture of clean, drinkable water and DEX-COOL coolant until full.

4. Start the engine.

5. With the engine idling, top off the coolant through the radiator cap opening until full. Wait 30 seconds for the coolant to settle and top off, if the level drops.

6. Once the system is full, put the radiator cap back on by turning clockwise.

7. Turn the engine off.

8. Check the coolant level in the engine coolant recovery bottle and fill it until the level is at the top mark on the dipstick.

**Notice:** If the pressure cap is not tightly installed, coolant loss and possible engine damage may occur. Be sure the cap is properly and tightly secured.
10-30 Vehicle Care

Engine Overheating

The vehicle has an indicator to warn of engine overheating.

There is an engine coolant temperature warning light on your vehicle's instrument panel. See Engine Coolant Temperature Gauge on page 5-13.

You may decide not to lift the hood when this warning appears, but instead get service help right away. See Roadside Assistance Program (U.S. and Canada) on page 13-7 or Roadside Assistance Program (Mexico) on page 13-10.

If you do decide to lift the hood, make sure the vehicle is parked on a level surface.

Then check to see if the engine cooling fans are running. If the engine is overheating, both fans should be running. If they are not, do not continue to run the engine and have the vehicle serviced.

Notice: Engine damage from running the engine without coolant is not covered by the warranty.

Notice: If the engine catches fire because of being driven with no coolant, the vehicle can be badly damaged. The costly repairs would not be covered by the vehicle warranty.

If Steam Is Coming from the Engine Compartment

WARNING

Steam from an overheated engine can burn you badly, even if you just open the hood. Stay away from the engine if you see or hear steam coming from it. Just turn it off and get everyone away from the vehicle until it cools down. Wait until there is no sign of steam or coolant before you open the hood.

(Continued)

WARNING (Continued)

If you keep driving when the engine is overheated, the liquids in it can catch fire. You or others could be badly burned. Stop the engine if it overheats, and get out of the vehicle until the engine is cool.

If No Steam Is Coming from the Engine Compartment

If an engine overheat warning is displayed but no steam can be seen or heard, the problem may not be too serious. Sometimes the engine can get a little too hot when the vehicle:

• Climbs a long hill on a hot day.
• Stops after high-speed driving.
• Idles for long periods in traffic.
• Tows a trailer.
If the overheat warning is displayed with no sign of steam:

1. Turn the air off.
2. Turn the heater on to the highest temperature and to the highest fan speed. Open the windows as necessary.
3. In heavy traffic, let the engine idle in N (Neutral) while stopped. If it is safe to do so, pull off the road, shift to P (Park) or N (Neutral) and let the engine idle.

If the temperature overheat gauge is no longer in the overheat zone or an overheat warning no longer displays, the vehicle can be driven. Continue to drive the vehicle slow for about 10 minutes. Keep a safe vehicle distance from the car in front of you. If the warning does not come back on, continue to drive normally.

If the warning continues, pull over, stop, and park the vehicle right away.

If there is no sign of steam, idle the engine for three minutes while parked. If the warning is still displayed, turn off the engine until it cools down.

**Power Steering Fluid (Except ZL1)**

The power steering fluid reservoir is located under the engine cover on the driver side toward the front of the engine compartment. See *Engine Compartment Overview on page 10-6*.

**When to Check Power Steering Fluid**

It is not necessary to regularly check power steering fluid unless you suspect there is a leak in the system or an unusual noise is heard. A fluid loss in this system could indicate a problem. Have the system inspected and repaired.

**How to Check Power Steering Fluid**

*Notice:* Extremely small amounts of contamination can cause steering system damage and cause it to not work properly. Do not allow contaminants to contact the fluid side of the reservoir cap/dipstick or to enter the reservoir.

Check the level after the vehicle has been driven for at least 20 minutes so the fluid is warm.
To check the power steering fluid:

1. Turn the ignition key to LOCK/OFF and let the engine compartment cool down.
2. Remove the engine cover. See Engine Cover on page 10-11.
3. Wipe the cap and the top of the reservoir clean.
4. Turn the cap counterclockwise and pull it straight up.
5. Wipe the dipstick with a clean rag.
6. Replace the cap and completely tighten it.
7. Remove the cap again and look at the fluid level on the dipstick.

When the engine is hot, the level should be at the hot MAX level. When the engine is cold, the fluid level should be between MIN and MAX on the dipstick.

**What to Use**

To determine what kind of fluid to use, see Recommended Fluids and Lubricants on page 11-12. Always use the proper fluid.

**Power Steering Fluid (ZL1 Only)**

The vehicle has electric power steering and does not use power steering fluid.

**Washer Fluid**

**What to Use**

When windshield washer fluid is needed, be sure to read the manufacturer’s instructions before use. If operating the vehicle in an area where the temperature can fall below freezing, use a fluid that has sufficient protection against freezing.

**Adding Washer Fluid**

Open the cap with the washer symbol on it. Add washer fluid until the reservoir is full. See Engine Compartment Overview on page 10-6 for reservoir location.
Notice

- When using concentrated washer fluid, follow the manufacturer's instructions for adding water.
- Do not mix water with ready-to-use washer fluid. Water can cause the solution to freeze and damage the washer fluid tank and other parts of the washer system.
- Fill the washer fluid tank only three-quarters full when it is very cold. This allows for fluid expansion if freezing occurs, which could damage the tank if it is completely full.
- Do not use engine coolant (antifreeze) in the windshield washer. It can damage the windshield washer system and paint.

Brakes

This vehicle has disc brakes. Disc brake pads have built-in wear indicators that make a high-pitched warning sound when the brake pads are worn and new pads are needed. The sound can come and go or be heard all the time the vehicle is moving, except when applying the brake pedal firmly.

⚠️ WARNING

The brake wear warning sound means that soon the brakes will not work well. That could lead to a crash. When the brake wear warning sound is heard, have the vehicle serviced.

Notice: Continuing to drive with worn-out brake pads could result in costly brake repair.

Some driving conditions or climates can cause a brake squeal when the brakes are first applied or lightly applied. This does not mean something is wrong with the brakes. Properly torqued wheel nuts are necessary to help prevent brake pulsation. When tires are rotated, inspect brake pads for wear and evenly tighten wheel nuts in the proper sequence to torque specifications in Capacities and Specifications on page 12-2.

Brake linings should always be replaced as complete axle sets.

Brake Pedal Travel

See your dealer if the brake pedal does not return to normal height, or if there is a rapid increase in pedal travel. This could be a sign that brake service might be required.
10-34 Vehicle Care

Brake Adjustment
Every time the brakes are applied, with or without the vehicle moving, the brakes adjust for wear.

Replacing Brake System Parts
The braking system on a vehicle is complex. Its many parts have to be of top quality and work well together if the vehicle is to have really good braking. The vehicle was designed and tested with top-quality brake parts. When parts of the braking system are replaced, be sure to get new, approved replacement parts. If this is not done, the brakes might not work properly. For example, installing disc brake pads that are wrong for the vehicle, can change the balance between the front and rear brakes — for the worse. The braking performance expected can change in many other ways if the wrong replacement brake parts are installed.

Brake Fluid
The brake/clutch master cylinder reservoir is filled with DOT 3 brake fluid as indicated on the reservoir cap. See Engine Compartment Overview on page 10-6 for the location of the reservoir.

There are only two reasons why the fluid level in the reservoir might go down:
- The fluid level goes down because of normal brake lining wear. When new linings are installed, the fluid level goes back up.
- A fluid leak in the brake/clutch hydraulic system can also cause a low fluid level. Have the brake/clutch hydraulic system fixed, since a leak means that sooner or later the brakes and/or clutch will not work well.

Do not top off the brake/clutch fluid. Adding fluid does not correct a leak. If fluid is added when the linings are worn, there will be too much fluid when new brake linings are installed. Add or remove brake fluid, as necessary, only when work is done on the brake/clutch hydraulic system.

WARNING
If too much brake fluid is added, it can spill on the engine and burn, if the engine is hot enough. You or others could be burned, and the vehicle could be damaged. Add brake fluid only when work is done on the brake/clutch hydraulic system.
When the brake/clutch fluid falls to a low level, the brake warning light comes on. See Brake System Warning Light on page 5-21.

What to Add
Use only new DOT 3 brake fluid from a sealed container. See Recommended Fluids and Lubricants on page 11-12.

Always clean the brake/clutch fluid reservoir cap and the area around the cap before removing it. This helps keep dirt from entering the reservoir.

**WARNING**

With the wrong kind of fluid in the brake/clutch hydraulic system, the brakes might not work well. This could cause a crash. Always use the proper brake/clutch fluid.

**Notice**
- Using the wrong fluid can badly damage brake/clutch hydraulic system parts. For example, just a few drops of mineral-based oil, such as engine oil, in the brake hydraulic system can damage brake hydraulic system parts so badly that they will have to be replaced. Do not let someone put in the wrong kind of fluid.
- If brake fluid is spilled on the vehicle's painted surfaces, the paint finish can be damaged. Be careful not to spill brake fluid on the vehicle. If you do, wash it off immediately.

**Battery**
Refer to the replacement number shown on the original battery label when a new battery is needed. See Engine Compartment Overview on page 10-6 for battery location.

**WARNING**

Battery posts, terminals, and related accessories contain lead and lead compounds, chemicals known to the State of California to cause cancer and reproductive harm. Wash hands after handling.
Vehicle Storage

**WARNING**

Batteries have acid that can burn you and gas that can explode. You can be badly hurt if you are not careful. See Jump Starting on page 10-93 for tips on working around a battery without getting hurt.

Infrequent Usage: Remove the black, negative (−) cable from the battery to keep the battery from running down.

Extended Storage: Remove the black, negative (−) cable from the battery or use a battery trickle charger.

Rear Axle

**When to Check Lubricant**

It is not necessary to regularly check the rear axle fluid, unless there a leak is suspected or an unusual noise is heard. A fluid loss could indicate a problem. Have it inspected and repaired by your dealer.

Starter Switch Check

**WARNING**

When you are doing this inspection, the vehicle could move suddenly. If the vehicle moves, you or others could be injured.

1. Before starting this check, be sure there is enough room around the vehicle.

2. Firmly apply both the parking brake and the regular brake. See Parking Brake on page 9-40. Do not use the accelerator pedal, and be ready to turn off the engine immediately if it starts.

3. For automatic transmission vehicles, try to start the engine in each gear. The vehicle should start only in P (Park) or N (Neutral). If the vehicle starts in any other position, contact your dealer for service.

For manual transmission vehicles, put the shift lever in Neutral, push the clutch pedal down halfway, and try to start the engine. The vehicle should start only when the clutch pedal is pushed down all the way to the floor. If the vehicle starts when the clutch pedal is not pushed all the way down, contact your dealer for service.
Automatic Transmission Shift Lock Control Function Check

**WARNING**

When you are doing this inspection, the vehicle could move suddenly. If the vehicle moves, you or others could be injured.

1. Before starting this check, be sure there is enough room around the vehicle. It should be parked on a level surface.
2. Firmly apply the parking brake. See *Parking Brake on page 9-40*.

   Be ready to apply the regular brake immediately if the vehicle begins to move.

3. With the engine off, turn the ignition on, but do not start the engine. Without applying the regular brake, try to move the shift lever out of P (Park) with normal effort. If the shift lever moves out of P (Park), contact your dealer for service.

Ignition Transmission Lock Check

While parked, and with the parking brake set, try to turn the ignition to LOCK/OFF in each shift lever position.

- The ignition should turn to LOCK/OFF only when the shift lever is in P (Park).
- The ignition key should come out only in LOCK/OFF.

Contact your dealer if service is required.

Park Brake and P (Park) Mechanism Check

**WARNING**

When you are doing this check, the vehicle could begin to move. You or others could be injured and property could be damaged. Make sure there is room in front of the vehicle in case it begins to roll. Be ready to apply the regular brake at once should the vehicle begin to move.

Park on a fairly steep hill, with the vehicle facing downhill. Keeping your foot on the regular brake, set the parking brake.

- To check the parking brake's holding ability: With the engine running and the transmission in N (Neutral), slowly remove foot pressure from the regular brake pedal. Do this until the vehicle is held by the parking brake only.
10-38 Vehicle Care

- To check the P (Park) mechanism's holding ability:
  With the engine running, shift to P (Park). Then release the parking brake followed by the regular brake.

Contact your dealer if service is required.

Wiper Blade Replacement

Windshield wiper blades should be inspected for wear and cracking. See Maintenance Schedule on page 11-3 for more information. Replacement blades come in different types and are removed in different ways. For proper type and length, see Maintenance Replacement Parts on page 11-14.

To replace the windshield wiper blade:

1. Pull the windshield wiper assembly away from the windshield.

2. Lift up on the latch in the middle of the wiper blade where the wiper arm attaches.

3. With the latch open, pull the wiper blade down toward the windshield far enough to release it from the J-hooked end of the wiper arm.

4. Remove the wiper blade. Allowing the wiper blade arm to touch the windshield when no wiper blade is installed could damage the windshield. Any damage that occurs would not be covered by the vehicle warranty. Do not allow the wiper blade arm to touch the windshield.

5. Reverse Steps 1–3 for wiper blade replacement.

Windshield Replacement

If the vehicle is equipped with the Head-Up display (HUD) system and the windshield needs to be replaced, get one that is designed for HUD or the HUD image may look out of focus.
Headlamp Aiming

The headlamp aiming system has been preset at the factory.

If the vehicle is damaged in an accident, the aim of the headlamps may be affected and adjustment may be necessary.

It is recommended that a dealer adjust the headlamps. To re-aim the headlamps yourself, use the following procedure.

The vehicle should be properly prepared as follows:

- The vehicle should be placed so the headlamps are 7.6 m (25 ft) from a light colored wall.
- The vehicle must have all four tires on a level surface which is level all the way to the wall.
- The vehicle should be placed so it is perpendicular to the wall or other flat surface.
- The vehicle should not have any snow, ice, or mud on it.
- The vehicle should be fully assembled and all other work stopped while headlamp aiming is being performed.
- The vehicle should be normally loaded with a full tank of fuel and one person or 75 kg (160 lbs) sitting on the driver seat.
- Tires should be properly inflated.

Headlamp aiming is done with the vehicle's low-beam headlamps. The high-beam headlamps will be correctly aimed if the low-beam headlamps are aimed properly.

To adjust the vertical aim:

1. Open the hood. See Hood on page 10-5 for more information.

Halogen Headlamp
10-40 Vehicle Care

HID Headlamp

2. Locate the aim dot on the lens of the low-beam headlamp.

3. Measure the distance from the ground to the aim dot on the low-beam headlamp. Record the distance.

4. At the wall measure from the ground upward (A) to the recorded distance from Step 3 and mark it.

5. Draw or tape a horizontal line (B) on the wall the width of the vehicle at the height of the mark in Step 4.

Notice: Do not cover a headlamp to improve beam cut-off when aiming. Covering a headlamp may cause excessive heat build-up which may cause damage to the headlamp.

6. Turn on the low-beam headlamps and place a piece of cardboard or equivalent in front of the headlamp not being adjusted. This allows only the beam of light from the headlamp being adjusted to be seen on the flat surface.

Halogen Headlamp
HID Headlamp

7. Locate the vertical headlamp aiming screws, which are under the hood near each headlamp assembly.
   The adjustment screw can be turned with a 6 mm hex key.
8. Turn the vertical aiming screw until the headlamp beam is aimed to the horizontal tape line. Turn it clockwise or counterclockwise to raise or lower the angle of the beam.

9. Make sure that the light from the headlamp is positioned at the bottom edge of the horizontal tape line. The lamp on the left (A) shows the correct headlamp aim. The lamp on the right (B) shows the incorrect headlamp aim.
10. Repeat Steps 6–9 for the opposite headlamp.

Bulb Replacement

For the proper type of replacement bulbs, see Replacement Bulbs on page 10-46.
For any bulb-changing procedure not listed in this section, contact your dealer.

Halogen Bulbs

⚠️ WARNING
Halogen bulbs have pressurized gas inside and can burst if you drop or scratch the bulb. You or others could be injured. Be sure to read and follow the instructions on the bulb package.
10-42 Vehicle Care

High Intensity Discharge (HID) Lighting

WARNING

The low beam high intensity discharge lighting system operates at a very high voltage. If you try to service any of the system components, you could be seriously injured. Have your dealer or a qualified technician service them.

After an HID headlamp bulb has been replaced, the beam might be a slightly different shade than it was originally. This is normal.

Headlamps, Front Turn Signal and Parking Lamps (Base Vehicle)

The base model vehicle has a halogen headlamp and a turn signal/parking lamp on the headlamp assembly.

To replace one of these bulbs:

1. Open the hood. See Hood on page 10-5.

2. Press in on the tabs located on the sides of the duct and then push the duct rearward into the air cleaner/filter housing.
A. Parking/Turn Signal Lamp
B. Halogen Headlamp

3. Disconnect the wiring harness and turn the bulb socket counterclockwise to remove it from the headlamp assembly.

4. Pull the bulb straight out from the socket.

5. Push the new bulb into the socket and reinstall the socket into the headlamp assembly by turning it clockwise.

6. Reconnect the electrical connector.

7. Pull the duct back out of the air cleaner/filter housing until the tabs snap the duct back into position.

Headlamps, Front Turn Signal and Parking Lamps (Uplevel Vehicle)

The uplevel model vehicle has an HID headlamp and a turn signal lamp on the headlamp assembly. The parking lamp is also the function of the HID headlamp. See High Intensity Discharge (HID) Lighting on page 10-42.

To replace the turn signal bulb:

1. Open the hood. See Hood on page 10-5.

2. Press in on the tabs located on the sides of the duct and then push the duct rearward into the air cleaner/filter housing.
10-44 Vehicle Care

3. Disconnect the wiring harness and turn the bulb socket counterclockwise to remove it from the headlamp assembly.
4. Pull the bulb straight out from the socket.

5. Push the new bulb into the socket and reinstall the socket into the headlamp assembly by turning it clockwise.
6. Reconnect the electrical connector.
7. Pull the duct back out of the air cleaner/filter housing until the tabs snap the duct back into position.

Daytime Running Lamps (DRL)
The uplevel model vehicle may have daytime running lamps which would be located on the fascia.

To replace one of these bulbs:
1. Locate the bulb assembly under the front fascia.
2. Disconnect the electrical connector from the bulb assembly and pull out the bulb assembly.
3. Push in the new bulb assembly to lock it into place.

4. Reconnect the electrical connector to the bulb assembly.

The base model vehicle daytime running lamps are the low beam on the halogen headlamp. If one of these lamps fails, see Headlamps, Front Turn Signal and Parking Lamps (Uplevel Vehicle) on page 10-43 or Headlamps, Front Turn Signal and Parking Lamps (Base Vehicle) on page 10-42 for replacement information.

**Fog Lamps**

This vehicle may have fog lamps which would be located in the front fascia.

To replace one of these bulbs:

---

**Base Model Shown, Uplevel and ZL1 Similar**

1. Locate the bulb assembly under the front fascia.
2. Disconnect the electrical connector from the bulb assembly and pull out the bulb assembly.
3. Push in the new bulb assembly to lock it into place.
4. Reconnect the electrical connector to the bulb assembly.

---

**Taillamps, Turn Signal, and Stoplamps**

To replace a taillamp, turn signal, or stoplamp bulb:

1. Open the trunk. See Trunk on page 2-9.

2. Remove the close out panel retainers to gain access to the bulb socket connectors.
3. Turn the bulb socket counterclockwise to remove it.
4. Pull the old bulb straight out of the bulb socket.
5. Push the new bulb straight into the bulb socket until it clicks.
6. Turn the bulb socket clockwise to reinstall.

License Plate Lamp
To replace one of these bulbs:

1. Unclip the license plate lamp from the fascia opening.
2. Pull the license plate lamp down through the fascia opening.
3. Turn the bulb socket counterclockwise and pull the bulb straight out of the lamp socket.
4. Install the new bulb.
5. Push the bulb straight into the socket and turn clockwise to reinstall.
6. Reinstall the license plate lamp by lifting it through the fascia opening until the clip is in place.

**Electrical System**

**Electrical System Overload**

The vehicle has fuses and circuit breakers to protect against an electrical system overload.

When the current electrical load is too heavy, the circuit breaker opens and closes, protecting the circuit until the current load returns to normal or the problem is fixed. This greatly reduces the chance of circuit overload and fire caused by electrical problems.

Fuses and circuit breakers protect power devices in the vehicle.

Replace a bad fuse with a new one of the identical size and rating.

If there is a problem on the road and a fuse needs to be replaced, the same amperage fuse can be borrowed. Choose some feature of the vehicle that is not needed to use and replace it as soon as possible.

**Headlamp Wiring**

An electrical overload may cause the lamps to go on and off, or in some cases to remain off. Have the headlamp wiring checked right away if the lamps go on and off or remain off.

**Windshield Wipers**

If the wiper motor overheats due to heavy snow or ice, the windshield wipers will stop until the motor cools and will then restart.

Although the circuit is protected from electrical overload, overload due to heavy snow or ice may cause wiper linkage damage. Always clear ice and heavy snow from the windshield before using the windshield wipers.

If the overload is caused by an electrical problem and not snow or ice, be sure to get it fixed.

**Fuses and Circuit Breakers**

The wiring circuits in the vehicle are protected from short circuits by a combination of fuses and circuit breakers. This greatly reduces the chance of damage caused by electrical problems.

To check a fuse, look at the silver-colored band inside the fuse. If the band is broken or melted, replace the fuse. Be sure to replace a bad fuse with a new one of the identical size and rating.

Fuses of the same amperage can be temporarily borrowed from another fuse location, if a fuse goes out. Replace the fuse as soon as possible.

To identify and check fuses, circuit breakers, and relays, see *Engine Compartment Fuse Block on page 10-48, Instrument Panel Fuse Block on page 10-50, and Rear Compartment Fuse Block on page 10-52.*

Engine Compartment Fuse Block

To remove the hinged fuse block cover, press the clip at the front of the cover, and swing it up.

*Notice:* Spilling liquid on any electrical component on the vehicle may damage it. Always keep the covers on any electrical component.

The vehicle may not be equipped with all of the fuses, relays, and features shown.

Wheels and Tires

Tires

Every new GM vehicle has high-quality tires made by a leading tire manufacturer. See the warranty manual for information regarding the tire warranty and where to get service. For additional information refer to the tire manufacturer.

⚠️ WARNING

- Poorly maintained and improperly used tires are dangerous.
- Overloading the tires can cause overheating as a result of too much flexing. There could be a blowout and a serious crash. See Vehicle Load Limits on page 9-14.

WARNING (Continued)

- Underinflated tires pose the same danger as overloaded tires. The resulting crash could cause serious injury. Check all tires frequently to maintain the recommended pressure. Tire pressure should be checked when the tires are cold.
- Overinflated tires are more likely to be cut, punctured, or broken by a sudden impact—such as when hitting a pothole. Keep tires at the recommended pressure.
- Worn or old tires can cause a crash. If the tread is badly worn, replace them.
- Replace any tires that have been damaged by impacts with potholes, curbs, etc.

WARNING (Continued)

- Improperly repaired tires can cause a crash. Only the dealer or an authorized tire service center should repair, replace, dismount, and mount the tires.
- Do not spin the tires in excess of 56 km/h (35 mph) on slippery surfaces such as snow, mud, ice, etc. Excessive spinning may cause the tires to explode.

(Continued)
All-Season Tires

This vehicle may come with all-season tires. These tires are designed to provide good overall performance on most road surfaces and weather conditions. Original equipment tires designed to GM's specific tire performance criteria have a TPC specification code molded onto the sidewall. Original equipment all-season tires can be identified by the last two characters of this TPC code, which will be "MS."

Consider installing winter tires on the vehicle if frequent driving on snow or ice covered roads is expected. All-season tires provide adequate performance for most winter driving conditions, but they may not offer the same level of traction or performance as winter tires on snow or ice covered roads. See Winter Tires on page 10-55.

Winter Tires

Consider installing winter tires on the vehicle if frequent driving on snow or ice covered roads is expected. All-season tires provide good overall performance on most surfaces, but they may not offer the traction or the same level of performance as winter tires on snow or ice covered roads.

Winter tires, in general, are designed for increased traction on snow and ice covered roads. With winter tires, there may be decreased dry road traction, increased road noise, and shorter tread life. After changing to winter tires, be alert for changes in vehicle handling and braking.

See your dealer for details regarding winter tire availability and proper tire selection. Also, see Buying New Tires on page 10-71.

If using snow tires:

- Use tires of the same brand and tread type on all four wheel positions.
- Use only radial ply tires of the same size, load range, and speed rating as the original equipment tires.

Winter tires with the same speed rating as the original equipment tires may not be available for H, V, W, Y, and ZR speed rated tires. If winter tires with a lower speed rating are chosen, never exceed the tire's maximum speed capability.
Summer Tires
This vehicle may come with high performance summer tires. These tires have a special tread and compound that are optimized for maximum dry and wet road performance. This special tread and compound will decrease performance in cold climates, and on ice and snow. We recommend installing winter tires on the vehicle if frequent driving in cold temperatures or on snow or ice covered roads is expected. See Winter Tires on page 10-55.

Tire Sidewall Labeling
Useful information about a tire is molded into its sidewall. The examples show a typical passenger vehicle tire and a compact spare tire sidewall.

Passenger (P-Metric) Tire Example
(A) Tire Size: The tire size is a combination of letters and numbers used to define a particular tire’s width, height, aspect ratio, construction type, and service description. See the “Tire Size” illustration later in this section for more detail.

(B) TPC Spec (Tire Performance Criteria Specification): Original equipment tires designed to GM’s specific tire performance criteria have a TPC specification code molded onto the sidewall. GM’s TPC specifications meet or exceed all federal safety guidelines.

(C) DOT (Department of Transportation): The Department of Transportation (DOT) code indicates that the tire is in compliance with the U.S. Department of Transportation Motor Vehicle Safety Standards.

DOT Tire Date of Manufacture: The last four digits of the TIN indicate the tire manufactured date. The first two digits represent the week (01–52) and the last two digits, the year. For example, the third week of the year 2010 would have a four-digit DOT date of 0310.
(D) Tire Identification Number (TIN): The letters and numbers following the DOT (Department of Transportation) code are the Tire Identification Number (TIN). The TIN shows the manufacturer and plant code, tire size, and date the tire was manufactured. The TIN is molded onto both sides of the tire, although only one side may have the date of manufacture.

(E) Tire Ply Material: The type of cord and number of plies in the sidewall and under the tread.

(F) Uniform Tire Quality Grading (UTQG): Tire manufacturers are required to grade tires based on three performance factors: treadwear, traction, and temperature resistance. For more information see Uniform Tire Quality Grading on page 10-73.

(G) Maximum Cold Inflation Load Limit: Maximum load that can be carried and the maximum pressure needed to support that load.

Compact Spare Tire Example

(A) Tire Ply Material: The type of cord and number of plies in the sidewall and under the tread.

(B) Temporary Use Only: The compact spare tire or temporary use tire should not be driven at speeds over 80 km/h (50 mph). The compact spare tire is for emergency use when a regular road tire has lost air and gone flat. If the vehicle has a compact spare tire, see Compact Spare Tire on page 10-92 and If a Tire Goes Flat on page 10-77.

(C) Tire Identification Number (TIN): The letters and numbers following the DOT (Department of Transportation) code are the Tire Identification Number (TIN). The TIN shows the manufacturer and plant code, tire size, and date the tire was manufactured. The TIN is molded onto both sides of the tire, although only one side may have the date of manufacture.

(D) Maximum Cold Inflation Load Limit: Maximum load that can be carried and the maximum pressure needed to support that load.
10-58 Vehicle Care

(E) Tire Inflation: The temporary use tire or compact spare tire should be inflated to 420 kPa (60 psi). For more information on tire pressure and inflation see Tire Pressure on page 10-62.

(F) Tire Size: A combination of letters and numbers define a tire's width, height, aspect ratio, construction type, and service description. The letter T as the first character in the tire size means the tire is for temporary use only.

(G) TPC Spec (Tire Performance Criteria Specification): Original equipment tires designed to GM's specific tire performance criteria have a TPC specification code molded onto the sidewall. GM's TPC specifications meet or exceed all federal safety guidelines.

Tire Designations

Tire Size
The following is an example of a typical passenger vehicle tire size.

P225/60R16 97S

(A) Passenger (P-Metric) Tire: The United States version of a metric tire sizing system. The letter P as the first character in the tire size means a passenger vehicle tire engineered to standards set by the U.S. Tire and Rim Association.

(B) Tire Width: The three-digit number indicates the tire section width in millimeters from sidewall to sidewall.

(C) Aspect Ratio: A two-digit number that indicates the tire height-to-width measurements. For example, if the tire size aspect ratio is 60, as shown in item C of the illustration, it would mean that the tire's sidewall is 60 percent as high as it is wide.

(D) Construction Code: A letter code is used to indicate the type of ply construction in the tire. The letter R means radial ply construction; the letter D means diagonal or bias ply construction; and the letter B means belted-bias ply construction.

(E) Rim Diameter: Diameter of the wheel in inches.
Vehicle Care 10-59

(F) Service Description: These characters represent the load index and speed rating of the tire. The load index represents the load carrying capacity a tire is certified to carry. The speed rating is the maximum speed a tire is certified to carry a load.

Tire Terminology and Definitions

Air Pressure: The amount of air inside the tire pressing outward on each square inch of the tire. Air pressure is expressed in kPa (kilopascal) or psi (pounds per square inch).

Accessory Weight: The combined weight of optional accessories. Some examples of optional accessories are automatic transmission, power steering, power brakes, power windows, power seats, and air conditioning.

Aspect Ratio: The relationship of a tire's height to its width.

Belt: A rubber coated layer of cords that is located between the plies and the tread. Cords may be made from steel or other reinforcing materials.

Bead: The tire bead contains steel wires wrapped by steel cords that hold the tire onto the rim.

Bias Ply Tire: A pneumatic tire in which the plies are laid at alternate angles less than 90 degrees to the centerline of the tread.

Cold Tire Pressure: The amount of air pressure in a tire, measured in kPa (kilopascal) or psi (pounds per square inch) before a tire has built up heat from driving. See Tire Pressure on page 10-62.

Curb Weight: The weight of a motor vehicle with standard and optional equipment including the maximum capacity of fuel, oil, and coolant, but without passengers and cargo.

DOT Markings: A code molded into the sidewall of a tire signifying that the tire is in compliance with the U.S. Department of Transportation (DOT) Motor Vehicle Safety Standards. The DOT code includes the Tire Identification Number (TIN), an alphanumeric designator which can also identify the tire manufacturer, production plant, brand, and date of production.

10-60  Vehicle Care

**GAWR FRT:** Gross Axle Weight Rating for the front axle. See *Vehicle Load Limits on page 9-14*.

**GAWR RR:** Gross Axle Weight Rating for the rear axle. See *Vehicle Load Limits on page 9-14*.

**Intended Outboard Sidewall:** The side of an asymmetrical tire, that must always face outward when mounted on a vehicle.

**Kilopascal (kPa):** The metric unit for air pressure.

**Light Truck (LT-Metric) Tire:** A tire used on light duty trucks and some multipurpose passenger vehicles.

**Load Index:** An assigned number ranging from 1 to 279 that corresponds to the load carrying capacity of a tire.

**Maximum Inflation Pressure:** The maximum air pressure to which a cold tire can be inflated. The maximum air pressure is molded onto the sidewall.

**Maximum Load Rating:** The load rating for a tire at the maximum permissible inflation pressure for that tire.

**Maximum Loaded Vehicle Weight:** The sum of curb weight, accessory weight, vehicle capacity weight, and production options weight.

**Normal Occupant Weight:** The number of occupants a vehicle is designed to seat multiplied by 68 kg (150 lbs). See *Vehicle Load Limits on page 9-14*.

**Occupant Distribution:** Designated seating positions.

**Outward Facing Sidewall:** The side of an asymmetrical tire that has a particular side that faces outward when mounted on a vehicle. The side of the tire that contains a whitewall, bears white lettering, or bears manufacturer, brand, and/or model name molding that is higher or deeper than the same moldings on the other sidewall of the tire.

**Passenger (P-Metric) Tire:** A tire used on passenger cars and some light duty trucks and multipurpose vehicles.

**Recommended Inflation Pressure:** Vehicle manufacturer's recommended tire inflation pressure as shown on the tire placard. See *Tire Pressure on page 10-62 and Vehicle Load Limits on page 9-14*.
Radial Ply Tire: A pneumatic tire in which the ply cords that extend to the beads are laid at 90 degrees to the centerline of the tread.

Rim: A metal support for a tire and upon which the tire beads are seated.

Sidewall: The portion of a tire between the tread and the bead.

Speed Rating: An alphanumeric code assigned to a tire indicating the maximum speed at which a tire can operate.

Traction: The friction between the tire and the road surface. The amount of grip provided.

Tread: The portion of a tire that comes into contact with the road.

Treadwear Indicators: Narrow bands, sometimes called wear bars, that show across the tread of a tire when only 1.6 mm (1/16 in) of tread remains. See When It Is Time for New Tires on page 10-70.

UTQGS (Uniform Tire Quality Grading Standards): A tire information system that provides consumers with ratings for a tire's traction, temperature, and treadwear. Ratings are determined by tire manufacturers using government testing procedures. The ratings are molded into the sidewall of the tire. See Uniform Tire Quality Grading on page 10-73.

Vehicle Capacity Weight: The number of designated seating positions multiplied by 68 kg (150 lbs) plus the rated cargo load. See Vehicle Load Limits on page 9-14.

Vehicle Maximum Load on the Tire: Load on an individual tire due to curb weight, accessory weight, occupant weight, and cargo weight.

Vehicle Placard: A label permanently attached to a vehicle showing the vehicle capacity weight and the original equipment tire size and recommended inflation pressure. See “Tire and Loading Information Label” under Vehicle Load Limits on page 9-14.
Tire Pressure

Tires need the correct amount of air pressure to operate effectively.

**Notice:** Neither tire underinflation nor overinflation is good. Underinflated tires, or tires that do not have enough air, can result in:

- Tire overloading and overheating which could lead to a blowout.
- Premature or irregular wear.
- Poor handling.
- Reduced fuel economy.

Overinflated tires, or tires that have too much air, can result in:

- Unusual wear.
- Poor handling.

- Rough ride.
- Needless damage from road hazards.

The Tire and Loading Information label on the vehicle indicates the original equipment tires and the correct cold tire inflation pressures. The recommended pressure is the minimum air pressure needed to support the vehicle's maximum load carrying capacity.

For additional information regarding how much weight the vehicle can carry, and an example of the Tire and Loading Information label, see *Vehicle Load Limits on page 9-14*. How the vehicle is loaded affects vehicle handling and ride comfort. Never load the vehicle with more weight than it was designed to carry.

When to Check

Check the tires once a month or more. Do not forget the compact spare tire, if the vehicle has one. The cold compact spare should be at 420 kPa (60 psi). See *Compact Spare Tire on page 10-92*.

How to Check

Use a good quality pocket-type gauge to check tire pressure. Proper tire inflation cannot be determined by looking at the tire. Check the tire inflation pressure when the tires are cold, meaning the vehicle has not been driven for at least three hours or no more than 1.6 km (1 mi).
Remove the valve cap from the tire valve stem. Press the tire gauge firmly onto the valve to get a pressure measurement. If the cold tire inflation pressure matches the recommended pressure on the Tire and Loading Information label, no further adjustment is necessary. If the inflation pressure is low, add air until the recommended pressure is reached. If the inflation pressure is high, press on the metal stem in the center of the tire valve to release air.

Recheck the tire pressure with the tire gauge.

Return the valve caps on the valve stems to prevent leaks and keep out dirt and moisture.

**Tire Pressure for High-Speed Operation**

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>Driving at high speeds, 160 km/h (100 mph) or higher, puts an additional strain on tires. Sustained high-speed driving causes excessive heat buildup and can cause sudden tire failure. You could have a crash and you or others could be killed. Some high-speed rated tires require inflation pressure adjustment for high-speed operation. When speed limits and road conditions are such that a vehicle can be driven at high speeds, make sure the tires are rated for high-speed operation, in excellent condition, and set to the correct cold tire inflation pressure for the vehicle load.</td>

Vehicles with 245/45ZR20 103Y, P245/50ZR19 104W, 275/40ZR20 106Y, 285/35ZR20 (100Y), and 305/35ZR20 (104Y) size tires, have tires capable of high speed use.

Make sure vehicles with 245/45ZR20 103Y, P245/50ZR19 104W and 275/40ZR20 106Y size tires are inflated to the recommended cold inflation pressures before operating the vehicle at speeds over 160 km/h (100 mph). See Vehicle Load Limits on page 9-14 and Tire Pressure on page 10-62.

Make sure vehicles with 285/35ZR20 (100Y), and 305/35ZR20 (104Y) size tires are inflated to 300 kPa (44 psi) before operating the vehicle at speeds of 160 km/h (100 mph) or higher.

Return the tires to the recommended cold tire inflation pressure when high-speed driving has ended. See Vehicle Load Limits on page 9-14 and Tire Pressure on page 10-62.
Tire Pressure Monitor System

The Tire Pressure Monitor System (TPMS) uses radio and sensor technology to check tire pressure levels. The TPMS sensors monitor the air pressure in your tires and transmit tire pressure readings to a receiver located in the vehicle.

Each tire, including the spare (if provided), should be checked monthly when cold and inflated to the inflation pressure recommended by the vehicle manufacturer on the vehicle placard or tire inflation pressure label. (If your vehicle has tires of a different size than the size indicated on the vehicle placard or tire inflation pressure label, you should determine the proper tire inflation pressure for those tires.)

As an added safety feature, your vehicle has been equipped with a tire pressure monitoring system (TPMS) that illuminates a low tire pressure telltale when one or more of your tires is significantly under-inflated.

Accordingly, when the low tire pressure telltale illuminates, you should stop and check your tires as soon as possible, and inflate them to the proper pressure. Driving on a significantly under-inflated tire causes the tire to overheat and can lead to tire failure. Under-inflation also reduces fuel efficiency and tire tread life, and may affect the vehicle’s handling and stopping ability.

Please note that the TPMS is not a substitute for proper tire maintenance, and it is the driver’s responsibility to maintain correct tire pressure, even if under-inflation has not reached the level to trigger illumination of the TPMS low tire pressure telltale.

Your vehicle has also been equipped with a TPMS malfunction indicator to indicate when the system is not operating properly. The TPMS malfunction indicator is combined with the low tire pressure telltale. When the system detects a malfunction, the telltale will flash for approximately one minute and then remain continuously illuminated. This sequence will continue upon subsequent vehicle start-ups as long as the malfunction exists.

When the malfunction indicator is illuminated, the system may not be able to detect or signal low tire pressure as intended. TPMS malfunctions may occur for a variety of reasons, including the installation of replacement or alternate tires or wheels on the vehicle that prevent the TPMS from functioning properly.
Always check the TPMS malfunction telltale after replacing one or more tires or wheels on your vehicle to ensure that the replacement or alternate tires and wheels allow the TPMS to continue to function properly.

See Tire Pressure Monitor Operation on page 10-65 for additional information.

Federal Communications Commission (FCC) Rules and with Industry Canada Standards

Tire Pressure Monitor Operation

This vehicle may have a Tire Pressure Monitor System (TPMS). The TPMS is designed to warn the driver when a low tire pressure condition exists. TPMS sensors are mounted onto each tire and wheel assembly, excluding the spare tire and wheel assembly, if the vehicle has one. The TPMS sensors monitor the air pressure in the tires and transmit the tire pressure readings to a receiver located in the vehicle.

When a low tire pressure condition is detected, the TPMS illuminates the low tire pressure warning light located on the instrument cluster. If the warning light comes on, stop as soon as possible and inflate the tires to the recommended pressure shown on the Tire and Loading Information label. See Vehicle Load Limits on page 9-14.

A message to check the pressure in a specific tire displays in the DIC. The low tire pressure warning light and the DIC warning message come at each ignition cycle until the tires are inflated to the correct inflation pressure. Using the DIC, tire pressure levels can be viewed. For additional information and details about the DIC operation and displays, see Tire Messages on page 5-43.
10-66 Vehicle Care

The low tire pressure warning light may come on in cool weather when the vehicle is first started, and then turn off as the vehicle is driven. This could be an early indicator that the air pressure is getting low and needs to be inflated to the proper pressure.

The Tire and Loading Information label shows the size of the original equipment tires and the correct inflation pressure for the tires when they are cold. See Vehicle Load Limits on page 9-14, for an example of the Tire and Loading Information label and its location. Also see Tire Pressure on page 10-62.

The TPMS can warn about a low tire pressure condition but it does not replace normal tire maintenance. See Tire Inspection on page 10-68, Tire Rotation on page 10-68 and Tires on page 10-54.

Notice: Tire sealant materials are not all the same. A non-approved tire sealant could damage the TPMS sensors. TPMS sensor damage caused by using an incorrect tire sealant is not covered by the vehicle warranty. Always use only the GM-approved tire sealant available through your dealer or included in the vehicle.

Factory-installed Tire Inflator Kits use a GM-approved liquid tire sealant. Using non-approved tire sealants could damage the TPMS sensors. See Tire Sealant and Compressor Kit on page 10-78 for information regarding the inflator kit materials and instructions.

TPMS Malfunction Light and Message

The TPMS will not function properly if one or more of the TPMS sensors are missing or inoperable. When the system detects a malfunction, the low tire pressure warning light flashes for about one minute and then stays on for the remainder of the ignition cycle. A DIC warning message also displays. The malfunction light and DIC warning message come on at each ignition cycle until the problem is corrected. Some of the conditions that can cause these to come on are:

- One of the road tires has been replaced with the spare tire, if the vehicle has one. The spare tire does not have a TPMS sensor. The malfunction light and the DIC message should go off after the road tire is replaced and the sensor matching process is performed successfully. See "TPMS Sensor Matching Process" later in this section.
The TPMS sensor matching process was not done or not completed successfully after rotating the tires. The malfunction light and the DIC message should go off after successfully completing the sensor matching process. See "TPMS Sensor Matching Process" later in this section.

One or more TPMS sensors are missing or damaged. The malfunction light and the DIC message should go off when the TPMS sensors are installed and the sensor matching process is performed successfully. See your dealer for service.

Replacement tires or wheels do not match the original equipment tires or wheels. Tires and wheels other than those recommended could prevent the TPMS from functioning properly. See Buying New Tires on page 10-71.

Operating electronic devices or being near facilities using radio wave frequencies similar to the TPMS could cause the TPMS sensors to malfunction.

If the TPMS is not functioning properly, it cannot detect or signal a low tire condition. See your dealer for service if the TPMS malfunction light and DIC message come on and stay on.

**TPMS Sensor Matching Process**

Each TPMS sensor has a unique identification code. The identification code needs to be matched to a new tire/wheel position after rotating the vehicle’s tires or replacing one or more of the TPMS sensors. Also, the TPMS sensor matching process should be performed after replacing a spare tire with a road tire containing the TPMS sensor. The malfunction light and the DIC message should go off at the next ignition cycle. The sensors are matched to the tire/wheel positions, using a TPMS relearn tool, in the following order: driver side front tire, passenger side front tire, passenger side rear tire, and driver side rear. See your dealer for service or to purchase a relearn tool.

There are two minutes to match the first tire/wheel position, and five minutes overall to match all four tire/wheel positions. If it takes longer, the matching process stops and must be restarted.

The TPMS matching process is:

1. Set the parking brake.
2. Turn the ignition to ON/RUN with the engine off.
3. Go to the TPM vehicle information screen on the DIC. See Driver Information Center (DIC) on page 5-26. Press set to relearn the sensors. The horn sounds twice to signal the receiver is in relearn mode and TIRE LEARNING ACTIVE message displays on the DIC screen.
10-68  Vehicle Care

4. Start with the driver side front tire.

5. Place the relearn tool against the tire sidewall, near the valve stem. Then press the button to activate the TPMS sensor. A horn chirp confirms that the sensor identification code has been matched to this tire and wheel position.

6. Proceed to the passenger side front tire, and repeat the procedure in Step 5.

7. Proceed to the passenger side rear tire, and repeat the procedure in Step 5.

8. Proceed to the driver side rear tire, and repeat the procedure in Step 5.

9. After hearing the confirming horn chirp for the driver side rear tire, the horn sounds two more times to signal the tire learning mode is no longer active. Turn the ignition to LOCK/OFF.

10. Set all four tires to the recommended air pressure level as indicated on the Tire and Loading Information label. The tires air pressure will not appear on the screen until driving begins.

   **Tire Inspection**

   We recommend that the tires, including the spare tire, if the vehicle has one, be inspected for signs of wear or damage at least once a month.

   Replace the tire if:
   - The indicators at three or more places around the tire can be seen.
   - There is cord or fabric showing through the tire's rubber.
   - The tread or sidewall is cracked, cut, or snagged deep enough to show cord or fabric.
   - The tire has a bump, bulge, or split.
   - The tire has a puncture, cut, or other damage that cannot be repaired well because of the size or location of the damage.

   **Tire Rotation**

   If the vehicle has non-directional tires, they should be rotated every 12 000 km/7,500 mi. See *Maintenance Schedule* on page 11-3.

   Tires are rotated to achieve a uniform wear for all tires. The first rotation is the most important.
Any time unusual wear is noticed, rotate the tires as soon as possible and check the wheel alignment. Also check for damaged tires or wheels. See *When It Is Time for New Tires on page 10-70* and *Wheel Replacement on page 10-75*.

Directional tires should not be rotated. Each tire and wheel should be used only in the position it is in. Directional tires will have an arrow on the tire indicating the proper direction of rotation or will have “left” or “right” molded on the sidewall.

Use this rotation pattern if the vehicle has different size tires on the front and rear and they are non-directional.

Different tire sizes should not be rotated front to rear.

Use this rotation pattern when rotating tires of the same size installed on all four wheel positions.

If the vehicle has a compact spare tire, do not include it in the tire rotation.
10-70 Vehicle Care

Adjust the front and rear tires to the recommended inflation pressure on the Tire and Loading Information label after the tires have been rotated. See Tire Pressure on page 10-62 and Vehicle Load Limits on page 9-14.

Check that all wheel nuts are properly tightened. See “Wheel Nut Torque” under Capacities and Specifications on page 12-2.

⚠️ WARNING

Rust or dirt on a wheel, or on the parts to which it is fastened, can make wheel nuts become loose after time. The wheel could come off and cause an accident. When changing a wheel, remove any rust or dirt from places where the wheel attaches to the vehicle. In an emergency, a cloth or a paper towel can be used; however, use a scraper or wire brush later to remove all rust or dirt.

Lightly coat the center of the wheel hub with wheel bearing grease after a wheel change or tire rotation to prevent corrosion or rust build-up. Do not get grease on the flat wheel mounting surface or on the wheel nuts or bolts.

When It Is Time for New Tires

Factors such as maintenance, temperatures, driving speeds, vehicle loading, and road conditions affect the wear rate of the tires.

Treadwear indicators are one way to tell when it is time for new tires. Treadwear indicators appear when the tires have only 1.6 mm (1/16 in) or less of tread remaining. See Tire Inspection on page 10-68 and Tire Rotation on page 10-68 for more information.
The rubber in tires ages over time. This also applies for the spare tire, if the vehicle has one, even if it is never used. Multiple conditions including temperatures, loading conditions, and inflation pressure maintenance affect how fast aging takes place. Tires will typically need to be replaced due to wear before they may need to be replaced due to age. Consult the tire manufacturer for more information on when tires should be replaced.

**Vehicle Storage**

Tires age when stored normally mounted on a parked vehicle. Park a vehicle that will be stored for at least a month in a cool, dry, clean area away from direct sunlight to slow aging. This area should be free of grease, gasoline, or other substances that can deteriorate rubber.

Parking for an extended period can cause flat spots on the tires that may result in vibrations while driving. When storing a vehicle for at least a month, remove the tires or raise the vehicle to reduce the weight from the tires.

**Buying New Tires**

GM has developed and matched specific tires for the vehicle. The original equipment tires installed were designed to meet General Motors Tire Performance Criteria Specification (TPC Spec) system rating. When replacement tires are needed, GM strongly recommends buying tires with the same TPC Spec rating.

GM’s exclusive TPC Spec system considers over a dozen critical specifications that impact the overall performance of the vehicle, including brake system performance, ride and handling, traction control, and tire pressure monitoring performance. GM’s TPC Spec number is molded onto the tire’s sidewall near the tire size. If the tires have an all-season tread design, the TPC Spec number will be followed by MS for mud and snow. See *Tire Sidewall Labeling on page 10-56* for additional information.
10-72  Vehicle Care

GM recommends replacing all the tires at the same time. Uniform tread depth on all tires will help to maintain the performance of the vehicle. Braking and handling performance may be adversely affected if all the tires are not replaced at the same time. See Tire Inspection on page 10-68 and Tire Rotation on page 10-68 for information on proper tire rotation.

**WARNING**

Tires could explode during improper service. Attempting to mount or dismount a tire could cause injury or death. Only your dealer or authorized tire service center should mount or dismount the tires.

**WARNING**

Mixing tires of different sizes, brands, or types may cause loss of control of the vehicle, resulting in a crash or other vehicle damage. Use the correct size, brand, and type of tires on all wheels.

**WARNING**

Using bias-ply tires on the vehicle may cause the wheel rim flanges to develop cracks after many miles of driving. A tire and/or wheel could fail suddenly and cause a crash. Use only radial-ply tires with the wheels on the vehicle.

If the vehicle tires must be replaced with a tire that does not have a TPC Spec number, make sure they are the same size, load range, speed rating, and construction (radial) as the original tires.

Vehicles that have a tire pressure monitoring system could give an inaccurate low-pressure warning if non-TPC Spec rated tires are installed. See Tire Pressure Monitor System on page 10-64.

The Tire and Loading Information label indicates the original equipment tires on the vehicle. See Vehicle Load Limits on page 9-14 for the label location and more information about the Tire and Loading Information label.
Different Size Tires and Wheels

If wheels or tires are installed that are a different size than the original equipment wheels and tires, vehicle performance, including its braking, ride and handling characteristics, stability, and resistance to rollover may be affected. If the vehicle has electronic systems such as antilock brakes, rollover airbags, traction control, and electronic stability control, the performance of these systems can also be affected.

WARNING

If different sized wheels are used, there may not be an acceptable level of performance and safety if tires not recommended for those wheels are selected. This increases the chance of a crash and serious injury. Only use GM specific wheel and tire systems (Continued)

WARNING (Continued)

developed for the vehicle, and have them properly installed by a GM certified technician.

See Buying New Tires on page 10-71 and Accessories and Modifications on page 10-4.

Uniform Tire Quality Grading

Quality grades can be found where applicable on the tire sidewall between tread shoulder and maximum section width. For example:

Treadwear 200 Traction AA Temperature A

The following information relates to the system developed by the United States National Highway Traffic Safety Administration (NHTSA), which grades tires by treadwear, traction, and temperature performance. This applies only to vehicles sold in the United States. The grades are molded on the sidewalls of most passenger car tires. The Uniform Tire Quality Grading (UTQG) system does not apply to deep tread, winter tires, compact spare tires, tires with nominal rim diameters of 10 to 12 inches (25 to 30 cm), or to some limited-production tires.

While the tires available on General Motors passenger cars and light trucks may vary with respect to these grades, they must also conform to federal safety requirements and additional General Motors Tire Performance Criteria (TPC) standards.
10-74 Vehicle Care

All Passenger Car Tires Must Conform to Federal Safety Requirements In Addition To These Grades.

**Treadwear**

The treadwear grade is a comparative rating based on the wear rate of the tire when tested under controlled conditions on a specified government test course. For example, a tire graded 150 would wear one and a half (1½) times as well on the government course as a tire graded 100. The relative performance of tires depends upon the actual conditions of their use, however, and may depart significantly from the norm due to variations in driving habits, service practices and differences in road characteristics and climate.

**Traction – AA, A, B, C**

The traction grades, from highest to lowest, are AA, A, B, and C. Those grades represent the tire's ability to stop on wet pavement as measured under controlled conditions on specified government test surfaces of asphalt and concrete. A tire marked C may have poor traction performance. Warning: The traction grade assigned to this tire is based on straight-ahead braking traction tests, and does not include acceleration, cornering, hydroplaning, or peak traction characteristics.

**Temperature – A, B, C**

The temperature grades are A (the highest), B, and C, representing the tire's resistance to the generation of heat and its ability to dissipate heat when tested under controlled conditions on a specified indoor laboratory test wheel. Sustained high temperature can cause the material of the tire to degenerate and reduce tire life, and excessive temperature can lead to sudden tire failure. The grade C corresponds to a level of performance which all passenger car tires must meet under the Federal Motor Safety Standard No. 109. Grades B and A represent higher levels of performance on the laboratory test wheel than the minimum required by law. Warning: The temperature grade for this tire is established for a tire that is properly inflated and not overloaded. Excessive speed, underinflation, or excessive loading, either separately or in combination, can cause heat buildup and possible tire failure.
Wheel Alignment and Tire Balance

The tires and wheels were aligned and balanced at the factory to provide the longest tire life and best overall performance. Adjustments to wheel alignment and tire balancing will not be necessary on a regular basis. However, check the alignment if there is unusual tire wear or if the vehicle is pulling to one side or the other. If the vehicle vibrates when driving on a smooth road, the tires and wheels might need to be rebalanced. See your dealer for proper diagnosis.

Wheel Replacement

Replace any wheel that is bent, cracked, or badly rusted or corroded. If wheel nuts keep coming loose, the wheel, wheel bolts, and wheel nuts should be replaced. If the wheel leaks air, replace it. Some aluminum wheels can be repaired. See your dealer if any of these conditions exist.

Your dealer will know the kind of wheel that is needed.

Each new wheel should have the same load-carrying capacity, diameter, width, offset, and be mounted the same way as the one it replaces.

WARNING

Using the wrong replacement wheels, wheel bolts, or wheel nuts can be dangerous. It could affect the braking and handling of the vehicle. Tires can lose air, and cause loss of control, causing a crash. Always use the correct wheel, wheel bolts, and wheel nuts for replacement.
10-76 Vehicle Care

Notice: The wrong wheel can also cause problems with bearing life, brake cooling, speedometer or odometer calibration, headlamp aim, rear differential, bumper height, vehicle ground clearance, and tire or tire chain clearance to the body and chassis.

See If a Tire Goes Flat on page 10-77 for more information.
If a Tire Goes Flat

It is unusual for a tire to blow out while driving, especially if the tires are maintained properly. See Tires on page 10-54. If air goes out of a tire, it is much more likely to leak out slowly. But if there is ever a blowout, here are a few tips about what to expect and what to do:

If a front tire fails, the flat tire creates a drag that pulls the vehicle toward that side. Take your foot off the accelerator pedal and grip the steering wheel firmly. steer to maintain lane position, and then gently brake to a stop, well off the road, if possible.

A rear blowout, particularly on a curve, acts much like a skid and may require the same correction as used in a skid. Stop pressing the accelerator pedal and steer to straighten the vehicle. It may be very bumpy and noisy. Gently brake to a stop, well off the road, if possible.

### WARNING

Driving on a flat tire will cause permanent damage to the tire. Re-inflating a tire after it has been driven on while severely underinflated or flat may cause a blowout and a serious crash. Never attempt to re-inflate a tire that has been driven on while severely underinflated or flat. Have your dealer or an authorized tire service center repair or replace the flat tire as soon as possible.

### WARNING

Lifting a vehicle and getting under it to do maintenance or repairs is dangerous without the appropriate safety equipment and training. If a jack is provided with the vehicle, it is designed only for changing a flat tire. If it is used for anything else, you or others could be badly injured or killed if the vehicle slips off the jack. If a jack is provided with the vehicle, only use it for changing a flat tire.

If a tire goes flat, avoid further tire and wheel damage by driving slowly to a level place, well off the road, if possible. Turn on the hazard warning flashers. See Hazard Warning Flashers on page 6-4.
10-78 Vehicle Care

This vehicle may come with a jack and spare tire or a tire sealant and compressor kit. To use the jacking equipment to change a spare tire safely, follow the instructions below. Then see Tire Changing on page 10-86. To use the tire sealant and compressor kit, see Tire Sealant and Compressor Kit on page 10-78.

When the vehicle has a flat tire (B), use the following example as a guide to assist you in the placement of wheel blocks (A).

A. Wheel Block
B. Flat Tire

The following information explains how to repair or change a tire.

Tire Sealant and Compressor Kit

WARNING
Idling a vehicle in an enclosed area with poor ventilation is dangerous. Engine exhaust may enter the vehicle. Engine exhaust contains carbon monoxide (CO) which cannot be seen or smelled. It can cause unconsciousness and even death. Never run the engine in an enclosed area that has no fresh air ventilation. For more information, see Engine Exhaust on page 9-29.

WARNING
Changing a tire can be dangerous. The vehicle can slip off the jack and roll over or fall causing injury or death. Find a level place to change the tire. To help prevent the vehicle from moving:

1. Set the parking brake firmly.
2. Put an automatic transmission in P (Park) or a manual transmission in 1 (First) or R (Reverse).
3. Turn off the engine and do not restart while the vehicle is raised.
4. Do not allow passengers to remain in the vehicle.
5. Place wheel blocks on both sides of the tire at the opposite corner of the tire being changed.
**WARNING**

Overinflating a tire could cause the tire to rupture and you or others could be injured. Be sure to read and follow the tire sealant and compressor kit instructions and inflate the tire to its recommended pressure. Do not exceed the recommended pressure.

**WARNING**

Storing the tire sealant and compressor kit or other equipment in the passenger compartment of the vehicle could cause injury. In a sudden stop or collision, loose equipment could strike someone. Store the tire sealant and compressor kit in its original location.

Tire sealant may not completely seal a 305/35ZR20 tire below –18°C (0°F).

If this vehicle has a tire sealant and compressor kit, there may not be a spare tire, tire changing equipment, and on some vehicles there may not be a place to store a tire.

The tire sealant and compressor can be used to temporarily seal punctures up to 6 mm (0.25 in) in the tread area of the tire. It can also be used to inflate an underinflated tire.

If the tire has been separated from the wheel, has damaged sidewalls, or has a large puncture, the tire is too severely damaged for the tire sealant and compressor kit to be effective. See Roadside Assistance Program (U.S. and Canada) on page 13-7 or Roadside Assistance Program (Mexico) on page 13-10.

Read and follow all of the tire sealant and compressor kit instructions.

The kit includes:

A. On/Off Button
B. Selector Switch (Sealant/Air or Air Only)
C. Pressure Relief Button
D. Pressure Gauge
E. Air Only Hose (Black)
F. Sealant/Air Hose (Clear)
G. Power Plug
**Tire Sealant**

Read and follow the safe handling instructions on the label adhered to the compressor.

Check the tire sealant expiration date on the sealant canister. The sealant canister should be replaced before its expiration date. Replacement sealant canisters are available at your local dealer. See “Removal and Installation of the Sealant Canister” following.

There is only enough sealant to seal one tire. After usage, the sealant canister and sealant/air hose assembly must be replaced. See “Removal and Installation of the Sealant Canister” following.

If a tire goes flat, avoid further tire and wheel damage by driving slowly to a level place. Turn on the hazard warning flashers. See *Hazard Warning Flashers on page 6-4*.

See *If a Tire Goes Flat on page 10-77* for other important safety warnings.

Do not remove any objects that have penetrated the tire.

1. Remove the tire sealant and compressor kit from its storage location. See *Storing the Tire Sealant and Compressor Kit on page 10-85*.

2. Unwrap the sealant/air hose (F) and the power plug (G).

3. Place the kit on the ground.

Make sure the tire valve stem is positioned close to the ground so the hose will reach it.

**Using the Tire Sealant and Compressor Kit to Temporarily Seal and Inflate a Punctured Tire**

Follow the directions closely for correct sealant usage.

When using the tire sealant and compressor kit during cold temperatures, warm the kit in a heated environment for five minutes. This will help to inflate the tire faster.
4. Remove the valve stem cap from the flat tire by turning it counterclockwise.

5. Attach the sealant/air hose (F) onto the tire valve stem. Turn it clockwise until it is tight.

6. Plug the power plug (G) into the accessory power outlet in the vehicle. Unplug all items from other accessory power outlets. See Power Outlets on page 5-5.

   If the vehicle has an accessory power outlet, do not use the cigarette lighter.

   If the vehicle only has a cigarette lighter, use the cigarette lighter.

   Do not pinch the power plug cord in the door or window.

7. Start the vehicle. The vehicle must be running while using the air compressor.

8. Turn the selector switch (B) clockwise to the Sealant + Air position.

9. Press the on/off button (A) to turn the tire sealant and compressor kit on.

   The compressor will inject sealant and air into the tire.

   The pressure gauge (D) will initially show a high pressure while the compressor pushes the sealant into the tire. Once the sealant is completely dispersed into the tire, the pressure will quickly drop and start to rise again as the tire inflates with air only.

10. Inflate the tire to the recommended inflation pressure using the pressure gauge (D). The recommended inflation pressure can be found on the Tire and Loading Information label. See Tire Pressure on page 10-62.

   The pressure gauge (D) may read higher than the actual tire pressure while the compressor is on. Turn the compressor off to get an accurate pressure reading. The compressor may be turned on/off until the correct pressure is reached.

   **Notice:** If the recommended pressure cannot be reached after approximately 25 minutes, the vehicle should not be driven farther. The tire is too severely damaged and the tire sealant and compressor kit cannot inflate the tire. Remove the power plug from the accessory power outlet and unscrew the inflating hose from the tire valve. See Roadside Assistance Program (U.S. and Canada) on page 13-7 or Roadside Assistance Program (Mexico) on page 13-10.

11. Press the on/off button (A) to turn the tire sealant and compressor kit off.
The tire is not sealed and will continue to leak air until the vehicle is driven and the sealant is distributed in the tire; therefore, Steps 12–18 must be done immediately after Step 11.

Be careful while handling the tire sealant and compressor kit as it could be warm after usage.

12. Unplug the power plug (G) from the accessory power outlet in the vehicle.
13. Turn the sealant/air hose (F) counterclockwise to remove it from the tire valve stem.
14. Replace the tire valve stem cap.
15. Return the sealant/air hose (F) and the power plug (G) back in their original locations.
16. If the flat tire was able to inflate to the recommended inflation pressure, remove the maximum speed label from the sealant canister and place it in a highly visible location. Do not exceed the speed on this label until the damaged tire is repaired or replaced.
17. Return the equipment to its original storage location in the vehicle.
18. Immediately drive the vehicle 8 km (5 mi) to distribute the sealant in the tire.
19. Stop at a safe location and check the tire pressure. Refer to Steps 1–11 under “Using the Tire Sealant and Compressor Kit without Sealant to Inflate a Tire (Not Punctured).”

If the tire pressure has fallen more than 68 kPa (10 psi) below the recommended inflation pressure, stop driving the vehicle. The tire is too severely damaged and the tire sealant cannot seal the tire. See Roadside Assistance Program (U.S. and Canada) on page 13-7 or Roadside Assistance Program (Mexico) on page 13-10.

If the tire pressure has not dropped more than 68 kPa (10 psi) from the recommended inflation pressure, use the compressor kit to inflate the tire to the recommended inflation pressure.
20. Wipe off any sealant from the wheel, tire, and vehicle.

21. Dispose of the used sealant canister and sealant/air hose (F) assembly at a local dealer or in accordance with local state codes and practices.

22. Replace it with a new canister available from your dealer.

23. After temporarily sealing a tire using the tire sealant and compressor kit, take the vehicle to an authorized dealer within 161 km (100 mi) of driving to have the tire repaired or replaced.

**Using the Tire Sealant and Compressor Kit without Sealant to Inflate a Tire (Not Punctured)**

To use the air compressor to inflate a tire with air only and not sealant:

1. Remove the tire sealant and compressor kit from its storage location. See Storing the Tire Sealant and Compressor Kit on page 10-85.

2. Unwrap the air only hose (E) and the power plug (G).

3. Place the kit on the ground. Make sure the tire valve stem is positioned close to the ground so the hose will reach it.

4. Remove the tire valve stem cap from the flat tire by turning it counterclockwise.

5. Attach the air only hose (E) onto the tire valve stem by turning it clockwise until it is tight.

See If a Tire Goes Flat on page 10-77 for other important safety warnings.

1. Remove the tire sealant and compressor kit from its storage location. See Storing the Tire Sealant and Compressor Kit on page 10-85.

2. Unwrap the air only hose (E) and the power plug (G).

3. Place the kit on the ground. Make sure the tire valve stem is positioned close to the ground so the hose will reach it.

4. Remove the tire valve stem cap from the flat tire by turning it counterclockwise.

5. Attach the air only hose (E) onto the tire valve stem by turning it clockwise until it is tight.
6. Plug the power plug (G) into the accessory power outlet in the vehicle. Unplug all items from other accessory power outlets. See Power Outlets on page 5-5.
   If the vehicle has an accessory power outlet, do not use the cigarette lighter.
   If the vehicle only has a cigarette lighter, use the cigarette lighter.
   Do not pinch the power plug cord in the door or window.

7. Start the vehicle. The vehicle must be running while using the air compressor.

8. Turn the selector switch (B) counterclockwise to the Air Only position.

9. Press the on/off button (A) to turn the compressor on.
   The compressor will inflate the tire with air only.

10. Inflate the tire to the recommended inflation pressure using the pressure gauge (D). The recommended inflation pressure can be found on the Tire and Loading Information label. See Tire Pressure on page 10-62.
   The pressure gauge (D) may read higher than the actual tire pressure while the compressor is on. Turn the compressor off to get an accurate reading. The compressor may be turned on/off until the correct pressure is reached. If the tire is inflated higher than the recommended pressure, press the pressure relief button (C), if equipped, until the proper pressure reading is reached. This option is only functional when using the air only hose (E).

11. Press the on/off button (A) to turn the tire sealant and compressor kit off.
   Be careful while handling the tire sealant and compressor kit as it could be warm after usage.

12. Unplug the power plug (G) from the accessory power outlet in the vehicle.

13. Disconnect the air only hose (E) from the tire valve stem, by turning it counterclockwise, and replace the tire valve stem cap.

14. Return the air only hose (E) and the power plug (G) back to their original locations.

15. Return the equipment to its original storage location in the vehicle.
Removal and Installation of the Sealant Canister

To remove the sealant canister:

1. Remove the plastic cover.
2. Unscrew the connector (B) from the canister (A).
3. Pull up on the canister (A) to remove it.
4. Replace with a new canister which is available from your dealer.
5. Push the new canister into place.
6. Screw the connector (B) to the canister (A).
7. Slide the plastic cover back on.

Storing the Tire Sealant and Compressor Kit

The tire sealant and compressor kit is located in a foam container in the trunk.

1. Open the trunk. See Trunk on page 2-9.
2. Remove the carpet.
3. Turn the center retainer counterclockwise to remove the cover.
10-86 Vehicle Care

4. Remove the tire sealant and compressor kit from the foam container.

To store the tire sealant and compressor kit, reverse the steps.

Tire Changing

Removing the Spare Tire and Tools

Spare Tire

1. Open the trunk. See Trunk on page 2-9.
2. Remove the carpet.
3. Turn the center retainer counterclockwise to remove the spare tire cover.
4. Remove the spare tire and place it next to the tire being changed.

Tools

The jack and tools are stored below the spare tire.

Coin/Pierce Jack with Two-Piece Wrench

A. Tool Container
B. Two-Piece Wrench
C. Strap
D. Jack Handle Extension
E. Coin/Pierce Jack
Hex-Head Jack with Three-Piece Wrench

A. Tool Container
B. Three-Piece Wrench
C. Strap
D. Hex Head Jack

Removing the Flat Tire and Installing the Spare Tire

1. Do a safety check before proceeding. See If a Tire Goes Flat on page 10-77 for more information.

2. If the vehicle has wheel bolt caps, remove the caps. Store the caps with the wheel cover.

3. Use the fully extended wheel wrench to loosen all the wheel nuts one-half turn counterclockwise. Do not remove them yet.

4. Place the tools next to the tire being changed.

1. Turn the end of the jack (C) counterclockwise to loosen it. Remove the jack (B) from the retaining bracket.

2. Remove the tool container (A).

3. Remove the tools and tire strap from the tool container.
10-88 Vehicle Care

Notice: Make sure that the jack lift head is in the correct position or you may damage your vehicle. The repairs would not be covered by your warranty.

4. Position the jack lift head at the jack location nearest the flat tire. The location is indicated by a mark on the bottom edge of the vehicle. The jack must not be used in any other position.

Raise the jack until it engages with the jacking point.

WARNING
Getting under a vehicle when it is lifted on a jack is dangerous. If the vehicle slips off the jack, you could be badly injured or killed. Never get under a vehicle when it is supported only by a jack.

WARNING
Raising the vehicle with the jack improperly positioned can damage the vehicle and even make the vehicle fall. To help avoid personal injury and vehicle damage, be sure to fit the jack lift head into the proper location before raising the vehicle.

5. If you have a coin/pierce jack, attach the jack handle extension to the jack by sliding the hook through the end of the jack and insert the other end of the jack handle into the wrench.

If you have a hex head jack, place the hex tube end of the wrench over the hex head of the jack.
6. Raise the vehicle by turning the wrench clockwise until the vehicle is far enough off the ground to allow enough room for the compact spare tire to fit under the vehicle.

Keep the hook parallel to the ground. The wrench may need to be removed and repositioned to continue turning it.

7. Remove all of the wheel nuts and place them in a dry, clean place to avoid getting dirt in the threads.
10-90 Vehicle Care

**WARNING**

Rust or dirt on a wheel, or on the parts to which it is fastened, can make wheel nuts become loose after time. The wheel could come off and cause an accident. When changing a wheel, remove any rust or dirt from places where the wheel attaches to the vehicle. In an emergency, a cloth or a paper towel can be used; however, use a scraper or wire brush later to remove all rust or dirt.

8. Remove any rust or dirt from the wheel bolts, mounting surfaces, and spare wheel.

9. Place the compact spare tire on the wheel-mounting surface.

10. Reinstall the wheel nuts with the rounded end of the nuts toward the wheel. Tighten each nut as much as possible using the wheel wrench until the wheel is held firmly against the hub.

   Use your free hand to prevent the wheel from turning while you are tightening.

11. Lower the vehicle by turning the wrench counterclockwise. Lower the jack completely.

**WARNING**

Never use oil or grease on bolts or nuts because the nuts might come loose. The vehicle's wheel could fall off, causing a crash.
12. Tighten the wheel nuts firmly in a crisscross sequence, as shown.

**WARNING**

Wheel nuts that are improperly or incorrectly tightened can cause the wheels to become loose or come off. The wheel nuts should be tightened with a torque wrench to the proper torque specification after replacing. Follow the torque specification supplied by the aftermarket manufacturer when using accessory locking wheel nuts. See Capacities and Specifications on page 12-2 for original equipment wheel nut torque specifications.

**Notice:** Improperly tightened wheel nuts can lead to brake pulsation and rotor damage. To avoid expensive brake repairs, evenly tighten the wheel nuts in the proper sequence and to the proper torque specification. See Capacities and Specifications on page 12-2 for the wheel nut torque specification.

**Storing a Flat or Spare Tire and Tools**

- **WARNING**

Storing a jack, a tire, or other equipment in the passenger compartment of the vehicle could cause injury. In a sudden stop or collision, loose equipment could strike someone. Store all these in the proper place.

To store a flat or spare tire and tools:

1. Return the jack and tools as they were originally stored in the trunk.
2. Return the spare tire cover as it was in the trunk.
3. Install the retainer nut and turn it clockwise until tight.
4. Return the rear trunk carpet.
5. Place the flat tire face up on the load floor.
6. Route the strap provided, as shown, to secure the flat tire.

The compact spare tire is for temporary use only. Replace the compact spare with a full-size tire as soon as possible.

### Compact Spare Tire

**WARNING**

Driving with more than one compact spare tire at a time could result in loss of braking and handling. This could lead to a crash and you or others could be injured. Use only one compact spare tire at a time.

If this vehicle has a compact spare tire, it was fully inflated when new; however, it can lose air over time. Check the inflation pressure regularly. It should be 420 kPa (60 psi).

Stop as soon as possible and check that the spare tire is correctly inflated after being installed on the vehicle. The compact spare tire is designed for temporary use only. The vehicle will perform differently with the spare tire installed and it is recommended that the vehicle speed be limited to 80 km/h (50 mph). To conserve the tread of the spare tire, have the standard tire repaired or replaced as soon as convenient and return the spare tire to the storage area.

**Notice:** When the compact spare is installed, do not take the vehicle through an automatic car wash with guide rails. The compact spare can get caught on the rails which can damage the tire, wheel, and other parts of the vehicle.

Do not use the compact spare on other vehicles.

Do not mix the compact spare tire or wheel with other wheels or tires. They will not fit. Keep the spare tire and its wheel together.

**Notice:** Tire chains will not fit the compact spare. Using them can damage the vehicle and can damage the chains too. Do not use tire chains on the compact spare.
Jump Starting

For more information about the vehicle battery, see Battery on page 10-35.

If the battery has run down, try to use another vehicle and some jumper cables to start your vehicle. Be sure to use the following steps to do it safely.

⚠️ WARNING

Batteries can hurt you. They can be dangerous because:

- They contain acid that can burn you.
- They contain gas that can explode or ignite.
- They contain enough electricity to burn you.

If you do not follow these steps exactly, some or all of these things can hurt you.

Notice: Ignoring these steps could result in costly damage to the vehicle that would not be covered by the warranty.

Trying to start the vehicle by pushing or pulling it will not work, and it could damage the vehicle.

![Diagram of jump start connections]

The jump start positive (A) and negative (B) posts are located in the engine compartment on the driver side of the vehicle.

These posts are used instead of a direct connection to the battery.

The positive jump start connection is covered by a red cap. Remove to expose the terminal.

1. Check the other vehicle. It must have a 12-volt battery with a negative ground system.

Notice: Only use a vehicle that has a 12-volt system with a negative ground for jump starting. If the other vehicle does not have a 12-volt system with a negative ground, both vehicles can be damaged.

2. Position the two vehicles so that they are not touching.

10-94 Vehicle Care

Notice: If any accessories are left on or plugged in during the jump starting procedure, they could be damaged. The repairs would not be covered by the vehicle warranty. Whenever possible, turn off or unplug all accessories on either vehicle when jump starting the vehicle.

4. Turn the ignition to LOCK/OFF and switch off all lights and accessories in both vehicles, except the hazard warning flashers if needed.

WARNING
An electric fan can start up even when the engine is not running and can injure you. Keep hands, clothing and tools away from any underhood electric fan.

WARNING
Using a match near a battery can cause battery gas to explode. People have been hurt doing this, and some have been blinded. Use a flashlight if you need more light.

Be sure the battery has enough water. You do not need to add water to the battery installed in your new vehicle. But if a battery has filler caps, be sure the right amount of fluid is there. If it is low, add water to take care of that first. If you do not, explosive gas could be present.

Battery fluid contains acid that can burn you. Do not get it on you. If you accidentally get it in your eyes or on your skin, flush the place with water and get medical help immediately.

5. Connect one end of the red positive (+) cable to the jump start positive (+) post (A).

6. Connect the other end of the red positive (+) cable to the positive (+) terminal of the good battery (B).

WARNING
Fans or other moving engine parts can injure you badly. Keep your hands away from moving parts once the engine is running.
7. Connect one end of the black negative (−) cable to the negative (−) terminal of the good battery (C).

8. Connect the other end of the black negative (−) cable to the negative (−) post (D).

9. Start the engine in the vehicle with the good battery and run the engine at idle speed for at least four minutes.

10. Try to start the vehicle that had the dead battery. If it will not start after a few tries, it probably needs service.

Notice: If the jumper cables are connected or removed in the wrong order, electrical shorting may occur and damage the vehicle. The repairs would not be covered by the vehicle warranty. Always connect and remove the jumper cables in the correct order, making sure that the cables do not touch each other or other metal.

To disconnect the jumper cables from both vehicles:

1. Disconnect the black negative (−) cable from the vehicle that had the dead battery.

2. Disconnect the black negative (−) cable from the vehicle with the good battery.

3. Disconnect the red positive (+) cable from the vehicle with the good battery.

4. Disconnect the red positive (+) cable from the other vehicle.

5. Return the caps over the positive (+) and negative (−) terminals to their original positions.
Towing

Towing the Vehicle

Notice: To avoid damage, the disabled vehicle should be towed with all four wheels off the ground. Care must be taken with vehicles that have low ground clearance and/or special equipment. Always flatbed on a car carrier.

Due to low ramp angles on the ZL1, use care when loading the vehicle onto a flatbed carrier. Front spring spacers are provided for lifting the front suspension.

Consult your dealer or a professional towing service if the disabled vehicle must be towed. See Roadside Assistance Program (U.S. and Canada) on page 13-7 or Roadside Assistance Program (Mexico) on page 13-10.

To tow the vehicle behind another vehicle for recreational purposes, such as behind a motor home, see “Recreational Vehicle Towing” in this section.

Recreational Vehicle Towing

Notice: Dolly towing or dinghy towing the vehicle may cause damage because of reduced ground clearance. Always put the vehicle on a flatbed truck or trailer.

The vehicle was neither designed nor intended to be towed with any of its wheels on the ground. If the vehicle must be towed, see “Towing the Vehicle” earlier in this section.
Appearance Care

Exterior Care

Washing the Vehicle

To preserve the vehicle's finish, wash it often and out of direct sunlight.

*Notice:* Do not use petroleum based, acidic, or abrasive cleaning agents as they can damage the vehicle's paint, metal, or plastic parts. If damage occurs, it would not be covered by the vehicle's warranty.

Approved cleaning products can be obtained from your dealer. Follow all manufacturer directions regarding correct product usage, necessary safety precautions, and appropriate disposal of any vehicle care product.

*Notice:* Avoid using high pressure washes closer than 30 cm (12 in) to the surface of the vehicle. Use of power washers exceeding 8,274 kPa (1,200 psi) can result in damage or removal of paint and decals.

Rinse the vehicle well, before washing and after, to remove all cleaning agents completely. If they are allowed to dry on the surface, they could stain.

Dry the finish with a soft, clean chamois or an all-cotton towel to avoid surface scratches and water spotting.

Finish Care

Application of aftermarket clearcoat sealant/wax materials is not recommended. If painted surfaces are damaged, see your dealer to have the damage assessed and repaired. Foreign materials such as calcium chloride and other salts, ice melting agents, road oil and tar, tree sap, bird droppings, chemicals from industrial chimneys, etc., can damage the vehicle's finish if they remain on painted surfaces. Wash the vehicle as soon as possible. If necessary, use non-abrasive cleaners that are marked safe for painted surfaces to remove foreign matter.

Occasional hand waxing or mild polishing should be done to remove residue from the paint finish. See your dealer for approved cleaning products.
**10-98 Vehicle Care**

Do not apply waxes or polishes to uncoated plastic, vinyl, rubber, decals, simulated wood, or flat paint as damage can occur.

*Notice:* Machine compounding or aggressive polishing on a basecoat/clearcoat paint finish may damage it. Use only non-abrasive waxes and polishes that are made for a basecoat/clearcoat paint finish on the vehicle.

To keep the paint finish looking new, keep the vehicle garaged or covered whenever possible.

**Protecting Exterior Bright Metal Parts**

Regularly clean bright metal parts with water or chrome polish on chrome or stainless steel trim, if necessary.

For aluminum, never use auto or chrome polish, steam, or caustic soap to clean. A coating of wax, rubbed to high polish, is recommended for all bright metal parts.

**Hood Air Extractor**

It is not recommended that the air extractor on the ZL1 be waxed, as it will change the gloss level of the surface. In addition, care must be used when waxing around the air extractor. If a small amount of wax is applied to the extractor it can create an irregular appearance in the surface of the panel. If wax, debris, or other materials create stains on the air extractor, see your dealer for the recommended cleaner.

The air extractor has vent screens in the openings. Keep leaves or other debris out of the vent screens.

*Notice:* Pushing on the vent screens could damage them. Do not push on the screens when clearing.

There is a water deflector on the underside of the air extractor. Do not remove it.
Convertible Top care
Frequently hand wash convertible tops with mild car wash soap. Never use a stiff brush, steam, bleach, or aggressive cleaners. If necessary, a soft brush can be used to remove dirt. When finished cleaning, thoroughly rinse the fabric. Avoid automatic car washes with overhead brushes or very high pressure sprays as they can cause damage and leaking.
Only lower the top when it is completely dry and avoid leaving the top lowered for extended periods of time to prevent excessive interior weathering. Avoid leaving large amounts of snow on the top for extended periods of time as damage may also occur.

Cleaning Exterior Lamps/ Lenses and Emblems
Use only lukewarm or cold water, a soft cloth, and a car washing soap to clean exterior lamps and lenses. Follow instructions under "Washing the Vehicle" later in this section.

Windshield and Wiper Blades
Clean the outside of the windshield with glass cleaner.
Clean rubber blades using lint-free cloth or paper towel soaked with windshield washer fluid or a mild detergent. Wash the windshield thoroughly when cleaning the blades. Bugs, road grime, sap, and a buildup of vehicle wash/wax treatments may cause wiper streaking.
Replace the wiper blades if they are worn or damaged. Damage can be caused by extreme dusty conditions, sand, salt, heat, sun, snow and ice.

Weatherstrips
Apply silicone grease on weatherstrips to make them last longer, seal better, and not stick or squeak. See Recommended Fluids and Lubricants on page 11-12.

Tires
Use a stiff brush with tire cleaner to clean the tires. Notice: Using petroleum-based tire dressing products on the vehicle may damage the paint finish and/or tires. When applying a tire dressing, always wipe off any overspray from all painted surfaces on the vehicle.
Wheels and Trim — Aluminum or Chrome

Use a soft, clean cloth with mild soap and water to clean the wheels. After rinsing thoroughly with clean water, dry with a soft, clean towel. A wax may then be applied.

Notice: Chrome wheels and other chrome trim may be damaged if the vehicle is not washed after driving on roads that have been sprayed with magnesium, calcium, or sodium chloride. These chlorides are used on roads for conditions such as ice and dust. Always wash the chrome with soap and water after exposure.

Notice: To avoid surface damage, do not use strong soaps, chemicals, abrasive polishes, cleaners, brushes, or cleaners that contain acid on aluminum or chrome-plated wheels. Use only approved cleaners. Also, never drive a vehicle with aluminum or chrome-plated wheels through an automatic car wash that uses silicone carbide tire cleaning brushes. Damage could occur and the repairs would not be covered by the vehicle warranty.

Steering, Suspension, and Chassis Components

Visually inspect front and rear suspension and steering system for damaged, loose, or missing parts or signs of wear. Inspect the power steering for proper hook-up, binding, leaks, cracks, chafing, etc. Visually check constant velocity joints, rubber boots, and axle seals for leaks.

Body Component Lubrication

Lubricate all key lock cylinders, hood hinges, liftgate hinges, and steel fuel door hinge unless the components are plastic. Applying silicone grease on weatherstrips with a clean cloth will make them last longer, seal better, and not stick or squeak.

Underbody Maintenance

Use plain water to flush dirt and debris from the vehicle's underbody. Your dealer or an underbody car washing system can do this. If not removed, rust and corrosion can develop.

Sheet Metal Damage

If the vehicle is damaged and requires sheet metal repair or replacement, make sure the body repair shop applies anti-corrosion material to parts repaired or replaced to restore corrosion protection.

Original manufacturer replacement parts will provide the corrosion protection while maintaining the vehicle warranty.

**Finish Damage**

Quickly repair minor chips and scratches with touch-up materials available from your dealer to avoid corrosion. Larger areas of finish damage can be corrected in your dealer's body and paint shop.

**Chemical Paint Spotting**

Airborne pollutants can fall upon and attack painted vehicle surfaces causing blotchy, ring-shaped discolorations, and small, irregular dark spots etched into the paint surface.

**Interior Care**

To prevent dirt particle abrasions, regularly clean the vehicle's interior. Immediately remove any soils. Note that newspapers or dark garments that can transfer color to home furnishings can also permanently transfer color to the vehicle's interior.

Use a soft bristle brush to remove dust from knobs and crevices on the instrument cluster. Using a mild soap solution, immediately remove hand lotions, sunscreen, and insect repellent from all interior surfaces or permanent damage may result.

Your dealer may have products for cleaning the interior. Use cleaners specifically designed for the surfaces being cleaned to prevent permanent damage. To prevent overspray, apply all cleaners directly to the cleaning cloth. Cleaners should be removed quickly. Never allow cleaners to remain on the surface being cleaned for extended periods of time.

Cleaners may contain solvents that can become concentrated in the interior. Before using cleaners, read and adhere to all safety instructions on the label. While cleaning the interior, maintain adequate ventilation by opening the doors and windows.

To prevent damage, do not clean the interior using the following cleaners or techniques:

- Never use a razor or any other sharp object to remove a soil from any interior surface.
- Never use a brush with stiff bristles.
- Never rub any surface aggressively or with excessive pressure.
- Do not use laundry detergents or dishwashing soaps with degreasers. For liquid cleaners, use approximately 20 drops per 3.78 L (1 gal) of water. A concentrated soap solution will leave a residue that creates streaks and attracts dirt. Do not use solutions that contain strong or caustic soap.
10-102  Vehicle Care

- Do not heavily saturate the upholstery when cleaning.
- Do not use solvents or cleaners containing solvents.

**Interior Glass**

To clean, use a terry cloth fabric dampened with water. Wipe droplets left behind with a clean dry cloth. Commercial glass cleaners may be used, if necessary, after cleaning the interior glass with plain water.

**Notice:** To prevent scratching, never use abrasive cleaners on automotive glass. Abrasive cleaners or aggressive cleaning may damage the rear window defogger.

**Fabric/Carpet**

Start by vacuuming the surface using a soft brush attachment. If a rotating brush attachment is being used during vacuuming, only use it on the floor carpet. Before cleaning, gently remove as much of the soil as possible using one of the following techniques:

- Gently blot liquids with a paper towel. Continue blotting until no more soil can be removed.
- For solid soils, remove as much as possible prior to vacuuming.

To clean:

1. Saturate a clean lint-free colorfast cloth with water or club soda. Microfiber cloth is recommended to prevent lint transfer to the fabric or carpet.
2. Remove excess moisture by gently wringing until water does not drip from the cleaning cloth.
3. Start on the outside edge of the soil and gently rub toward the center. Fold the cleaning cloth to a clean area frequently to prevent forcing the soil in to the fabric.
4. Continue gently rubbing the soiled area until there is no longer any color transfer from the soil to the cleaning cloth.
5. If the soil is not completely removed, use a mild soap solution followed only by club soda or plain water. If the soil is not completely removed, it may be necessary to use a commercial upholstery cleaner or spot lifter. Test a small hidden area for colorfastness before using a commercial upholstery cleaner or spot lifter. If ring formation occurs, clean the entire fabric or carpet.

Following the cleaning process, a paper towel can be used to blot excess moisture.
**Instrument Panel, Vinyl, and Other Plastic Surfaces**

Use a soft microfiber cloth dampened with water to remove dust and loose dirt. For a more thorough cleaning, use a soft microfiber cloth dampened with a mild soap solution.

*Notice:* Soaking or saturating leather, especially perforated leather, as well as other interior surfaces, may cause permanent damage. Wipe excess moisture from these surfaces after cleaning and allow them to dry naturally. Never use heat, steam, spot lifters or spot removers. Do not use cleaners that contain silicone or wax-based products. Cleaners containing these solvents can permanently change the appearance and feel of leather or soft trim and are not recommended.

Do not use cleaners that increase gloss, especially on the instrument panel. Reflected glare can decrease visibility through the windshield under certain conditions.

*Notice:* Use of air fresheners may cause permanent damage to plastics and painted surfaces. If an air freshener comes in contact with any plastic or painted surface in the vehicle, blot immediately and clean with a soft cloth dampened with a mild soap solution. Damage caused by air fresheners would not be covered by the vehicle warranty.

**Floor Mats**

**WARNING**

If a floor mat is the wrong size or is not properly installed, it can interfere with the pedals. Interference with the pedals can cause unintended acceleration and/or increased stopping distance which can cause a crash and injury. Make sure the floor mat does not interfere with the pedals.

Use the following guidelines for proper floor mat usage.

- The original equipment floor mats were designed for your vehicle. If the floor mats need replacing, it is recommended that GM certified floor mats be purchased. Non-GM floor mats may not fit properly and may interfere with the pedals. Always check that the floor mats do not interfere with the pedals.
10-104 Vehicle Care

- Use the floor mat with the correct side up. Do not turn it over.
- Do not place anything on top of the driver side floor mat.
- Use only a single floor mat on the driver side.
- Do not place one floor mat on top of another.

Both floor mats are held in place by two hook-type retainers.

Removing and Replacing the Floor Mats

1. Pull up on the rear of the mat to remove it from the hooks.
2. Reinstall by lining up the floor mat retainer openings over the carpet retainers and hook into position.
3. Make sure the floor mat is properly secured and verify that it does not interfere with the pedals.
Service and Maintenance

General Information
Your vehicle is an important investment. This section describes the required maintenance for the vehicle. Follow this schedule to help protect against major repair expenses resulting from neglect or inadequate maintenance. It may also help to maintain the value of the vehicle if it is sold. It is the responsibility of the owner to have all required maintenance performed.

Your dealer has trained technicians who can perform required maintenance using genuine replacement parts. They have up-to-date tools and equipment for fast and accurate diagnostics. Many dealers have extended evening and Saturday hours, courtesy transportation, and online scheduling to assist with service needs.

With trained technicians, the dealer is the place for routine maintenance such as oil changes and tire rotations and additional maintenance items like tires, brakes, batteries, and wiper blades.

Notice: Damage caused by improper maintenance can lead to costly repairs and may not be covered by the vehicle warranty. Maintenance intervals, checks, inspections, recommended fluids, and lubricants are important to keep the vehicle in good working condition.

The Tire Rotation and Required Services are the responsibility of the vehicle owner. It is recommended to have your dealer perform these services every 12 000 km/7,500 mi. Proper vehicle maintenance helps to keep the vehicle in good working condition, improves fuel economy, and reduces vehicle emissions.
11-2 Service and Maintenance

Because of the way people use vehicles, maintenance needs vary. There may need to be more frequent checks and services. The Additional Required Services - Normal are for vehicles that:

- Carry passengers and cargo within recommended limits on the Tire and Loading Information label. See Vehicle Load Limits on page 9-14.
- Are driven on reasonable road surfaces within legal driving limits.
- Use the recommended fuel. See Recommended Fuel on page 9-56.

Refer to the information in the Maintenance Schedule Additional Required Services - Normal chart.

The Additional Required Services - Severe are for vehicles that are:

- Mainly driven in heavy city traffic in hot weather.
- Mainly driven in hilly or mountainous terrain.
- Frequently towing a trailer.
- Used for high speed or competitive driving.
- Used for taxi, police, or delivery service.

Refer to the information in the Maintenance Schedule Additional Required Services - Severe chart.

⚠️ WARNING

Performing maintenance work can be dangerous and can cause serious injury. Perform maintenance work only if the required information, proper tools, and equipment are available. If they are not, see your dealer to have a trained technician do the work. See Doing Your Own Service Work on page 10-4.
Maintenance Schedule

Owner Checks and Services

At Each Fuel Stop

- Check the engine oil level. See Engine Oil on page 10-13.

Once a Month

- Check the tire inflation pressures. See Tire Pressure on page 10-62.
- Inspect the tires for wear. See Tire Inspection on page 10-68.
- Check the windshield washer fluid level. See Washer Fluid on page 10-32.

Engine Oil Change

When the CHANGE ENGINE OIL SOON message displays, have the engine oil and filter changed within the next 1 000 km/600 mi. If driven under the best conditions, the engine oil life system might not indicate the need for vehicle service for more than a year. The engine oil and filter must be changed at least once a year and the oil life system must be reset. Your trained dealer technician can perform this work. If the engine oil life system is reset accidentally, service the vehicle within 5 000 km/3,000 mi since the last service. Reset the oil life system when the oil is changed. See Engine Oil Life System on page 10-16.

Tire Rotation and Required Services Every 12 000 km/7,500 mi

Rotate the tires, if recommended for the vehicle, and perform the following services. See Tire Rotation on page 10-68.

- Check engine oil level and oil life percentage. If needed, change engine oil and filter, and reset oil life system. See Engine Oil on page 10-13 and Engine Oil Life System on page 10-16.
- Check engine coolant level. See Engine Coolant on page 10-24.
- Check windshield washer fluid level. See Washer Fluid on page 10-32.
11-4 Service and Maintenance

- Visually inspect windshield wiper blades for wear, cracking, or contamination. See Exterior Care on page 10-97. Replace worn or damaged wiper blades. See Wiper Blade Replacement on page 10-38.
- Check tire inflation pressures. See Tire Pressure on page 10-62.
- Inspect tire wear. See Tire Inspection on page 10-68.
- Visually check for fluid leaks.
- Inspect engine air cleaner filter. See Engine Air Cleaner/Filter (Except ZL1) on page 10-18 or Engine Air Cleaner/Filter (ZL1 Only) on page 10-19.
- Inspect brake system.
- Visually inspect steering, suspension, and chassis components for damaged, loose, or missing parts or signs of wear. See Exterior Care on page 10-97.
- Check restraint system components. See Safety System Check on page 3-16.
- Visually inspect fuel system for damage or leaks.
- Visually inspect exhaust system and nearby heat shields for loose or damaged parts.
- Lubricate body components. See Engine Air Cleaner/Filter (Except ZL1) on page 10-18 or Engine Air Cleaner/Filter (ZL1 Only) on page 10-19.
- Check automatic transmission shift lock control function. See Automatic Transmission Shift Lock Control Function Check on page 10-37.
- Check ignition transmission lock. See Ignition Transmission Lock Check on page 10-37.
- Check parking brake and automatic transmission park mechanism. See Park Brake and P (Park) Mechanism Check on page 10-37.
- Check accelerator pedal for damage, high effort, or binding. Replace if needed.
- Visually inspect gas strut for signs of wear, cracks, or other damage. Check the hold open ability of the strut. See your dealer if service is required.
- Check tire sealant expiration date, if equipped. See Tire Sealant and Compressor Kit on page 10-78.
- Inspect sunroof track and seal, if equipped. See Sunroof on page 2-17.

a) Or every two years, whichever comes first. More frequent replacement may be needed if the vehicle is driven in areas with heavy traffic, areas with poor air quality, or areas with high dust levels. Replacement may also be needed if there is a reduction in air flow, excessive window fogging, or odors.

b) Check all fuel and vapor lines and hoses for proper hook-up, routing, and condition. Check that the purge valve, if the vehicle has one, works properly. Replace as needed.

c) Or every four years, whichever comes first.

d) Or every five years, whichever comes first. See Cooling System (Except ZL1 Engines) on page 10-20 or Cooling System (ZL1 Engine Only) on page 10-22 or Cooling System (Intercooler) on page 10-23.

e) Or every 10 years, whichever comes first. Inspect for fraying, excessive cracking, or damage; replace, if needed.

Special Application Services

- Vehicles with manual transmissions: Every two years drain, flush, and fill clutch hydraulic system.

- Severe Commercial Use Vehicles Only: Lubricate chassis components every 5,000 km/3,000 mi.

- Have underbody flushing service performed once a year.
Additional Maintenance and Care

Your vehicle is an important investment and caring for it properly may help to avoid future costly repairs. To maintain vehicle performance, additional maintenance services may be required. It is recommended that your dealer perform these services — their trained dealer technicians know your vehicle best. Your dealer can also perform a thorough assessment with a multi-point inspection to recommend when your vehicle may need attention. The following list is intended to explain the services and conditions to look for that may indicate services are required.

Battery
The battery supplies power to start the engine and operate any additional electrical accessories.
- To avoid break-down or failure to start the vehicle, maintain a battery with full cranking power.
- Trained dealer technicians have the diagnostic equipment to test the battery and ensure that the connections and cables are corrosion-free.

Belts
- Belts may need replacing if they squeak or show signs of cracking or splitting.
- Trained dealer technicians can inspect the belts and recommend replacement when necessary.

Brakes
Brakes stop the vehicle and are crucial to safe driving.
- Signs of brake wear may include chirping, grinding, or squealing noises, or difficulty stopping.
- Trained dealer technicians have access to tools and equipment to inspect the brakes and recommend quality parts engineered for the vehicle.

Fluids
Proper fluid levels and approved fluids protect the vehicle’s systems and components. See Recommended Fluids and Lubricants on page 11-12 for GM approved fluids.
- Engine oil and windshield washer fluid levels should be checked at every fuel fill.
- Instrument cluster lights may come on to indicate that fluids may be low and need to be filled.
11-10 Service and Maintenance

Hoses
Hoses transport fluids and should be regularly inspected to ensure that there are no cracks or leaks. With a multi-point inspection, your dealer can inspect the hoses and advise if replacement is needed.

Lamps
Properly working headlamps, taillamps, and brake lamps are important to see and be seen on the road.

- Signs that the headlamps need attention include dimming, failure to light, cracking, or damage. The brake lamps need to be checked periodically to ensure that they light when braking.
- With a multi-point inspection, your dealer can check the lamps and note any concerns.

Shocks and Struts
Shocks and struts help aid in control for a smoother ride.

- Signs of wear may include steering wheel vibration, bounce/sway while braking, longer stopping distance, or uneven tire wear.
- As part of the multi-point inspection, trained dealer technicians can visually inspect the shocks and struts for signs of leaking, blown seals, or damage, and can advise when service is needed.

Tires
Tires need to be properly inflated, rotated, and balanced. Maintaining the tires can save money, fuel, and can reduce the risk of tire failure.

- Signs that the tires need to be replaced include three or more visible treadwear indicators; cord or fabric showing through the rubber; cracks or cuts in the tread or sidewall; or a bulge or split in the tire.
- Trained dealer technicians can inspect and recommend the right tires. Your dealer can also provide tire/wheel balancing services to ensure smooth vehicle operation at all speeds. Your dealer sells and services name brand tires.
Vehicle Care
To help keep the vehicle looking like new, vehicle care products are available from your dealer. For information on how to clean and protect the vehicle’s interior and exterior, see Interior Care on page 10-101 and Exterior Care on page 10-97.

Wheel Alignment
Wheel alignment is critical for ensuring that the tires deliver optimal wear and performance.
- Signs that the alignment may need to be adjusted include pulling, improper vehicle handling, or unusual tire wear.
- Your dealer has the required equipment to ensure proper wheel alignment.

Windshield
For safety, appearance, and the best viewing, keep the windshield clean and clear.
- Signs of damage include scratches, cracks, and chips.
- Trained dealer technicians can inspect the windshield and recommend proper replacement if needed.

Wiper Blades
Wiper blades need to be cleaned and kept in good condition to provide a clear view.
- Signs of wear include streaking, skipping across the windshield, and worn or split rubber.
- Trained dealer technicians can check the wiper blades and replace them when needed.

Vehicle Identification

Vehicle Identification Number (VIN)

This legal identifier is in the front corner of the instrument panel, on the left side of the vehicle. It can be seen through the windshield from outside. The VIN also appears on the Vehicle Certification and Service Parts labels and certificates of title and registration.

Engine Identification
The eighth character in the VIN is the engine code. This code identifies the vehicle's engine, specifications, and replacement parts. See "Engine Specifications" under Capacities and Specifications on page 12-2 for the vehicle's engine code.

Service Parts Identification Label
This label, in the trunk, has the following information:

- Vehicle Identification Number (VIN).
- Model designation.
- Paint information.
- Production options and special equipment.

Do not remove this label from the vehicle.

### Reporting Safety Defects

Your satisfaction and goodwill are important to your dealer and to Chevrolet. Normally, any concerns with the sales transaction or the operation of the vehicle will be resolved by your dealer's sales or service departments. Sometimes, however, despite the best intentions of all concerned, misunderstandings can occur. If your concern has not been resolved to your satisfaction, the following steps should be taken:

**STEP ONE:** Discuss your concern with a member of dealership management. Normally, concerns can be quickly resolved at that level. If the matter has already been reviewed with the sales, service, or parts manager, contact the owner of your dealership or the general manager.
STEP TWO: If after contacting a member of dealership management, it appears your concern cannot be resolved by your dealership without further help, in the U.S., call the Chevrolet Customer Assistance Center at 1-800-222-1020. In Canada, call General Motors of Canada Customer Care Centre at 1-800-263-3777 (English), or 1-800-263-7854 (French).

We encourage you to call the toll-free number in order to give your inquiry prompt attention. Have the following information available to give the Customer Assistance representative:

- Vehicle Identification Number (VIN). This is available from the vehicle registration or title, or the plate at the top left of the instrument panel and visible through the windshield.
- Dealership name and location.
- Vehicle delivery date and present mileage.

When contacting Chevrolet, remember that your concern will likely be resolved at a dealer's facility. That is why we suggest following Step One first.

STEP THREE — U.S. Owners: Both General Motors and your dealer are committed to making sure you are completely satisfied with your new vehicle. However, if you continue to remain unsatisfied after following the procedure outlined in Steps One and Two, you can file with the Better Business Bureau (BBB) Auto Line® Program to enforce your rights.

The BBB Auto Line Program is an out-of-court program administered by the Council of Better Business Bureaus to settle automotive disputes regarding vehicle repairs or the interpretation of the New Vehicle Limited Warranty. Although you may be required to resort to this informal dispute resolution program prior to filing a court action, use of the program is free of charge and your case will generally be heard within 40 days. If you do not agree with the decision given in your case, you may reject it and proceed with any other venue for relief available to you.

You may contact the BBB Auto Line Program using the toll-free telephone number or write them at the following address:

This program is available in all 50 states and the District of Columbia. Eligibility is limited by vehicle age, mileage, and other factors. General Motors reserves the right to change eligibility limitations and/or discontinue its participation in this program.
STEP THREE — Canadian Owners: In the event that you do not feel your concerns have been addressed after following the procedure outlined in Steps One and Two, General Motors of Canada Limited wants you to be aware of its participation in a no-charge Mediation/Arbitration Program. General Motors of Canada Limited has committed to binding arbitration of owner disputes involving factory-related vehicle service claims. The program provides for the review of the facts involved by an impartial third party arbiter, and may include an informal hearing before the arbiter. The program is designed so that the entire dispute settlement process, from the time you file your complaint to the final decision, should be completed in about 70 days. We believe our impartial program offers advantages over courts in most jurisdictions because it is informal, quick, and free of charge.

For further information concerning eligibility in the Canadian Motor Vehicle Arbitration Plan (CAMVAP), call toll-free 1-800-207-0685, or call the General Motors Customer Care Centre, 1-800-263-3777 (English), 1-800-263-7854 (French), or write to:

Customer Satisfaction Procedure (Mexico)

Did you get the Warranty Extension Plan? This plan is recommended by General Motors to supplement the warranty included with the new vehicle purchase. See your dealer for details.
13-4 Customer Information

Customer Assistance Procedure

Owner satisfaction and goodwill are very important to your dealer and General Motors. Normally, any problem with the transaction, sale, or usage of the vehicle must be handled by your dealer sales or service departments. However, we recognize that despite the good intentions of all parties involved, sometimes a misunderstanding may occur.

If you have a problem that has not been satisfactorily handled through the normal means, we suggest the following steps:

STEP ONE

Explain your case to your dealer service agent, service manager, dealer sales agent, or sales manager, depending on your case. Make sure that they have all necessary information. They are interested in your continual satisfaction.

STEP TWO

If you are not satisfied, please contact the general manager or your dealership owner to ask for their help. If they are not able to resolve your case, ask them to contact the right people at General Motors for support, if needed.

STEP THREE

If your case is not resolved in a reasonable amount of time by your dealer, please call the General Motors Customer Assistance Center (CAC) and provide the following information:

- Name
- Address
- Phone number
- Model year
- Brand
- Vehicle Identification Number (VIN)
- Mileage
- Delivery date
- Description of the problem
- Dealership name
- Dealership address

Service is available 24 hours a day, 365 days a year.
13-8 Customer Information

Calling for Assistance
When calling Roadside Assistance, have the following information ready:

• Your name, home address, and home telephone number.
• Telephone number of your location.
• Location of the vehicle.
• Model, year, color, and license plate number of the vehicle.
• Odometer reading, Vehicle Identification Number (VIN), and delivery date of the vehicle.
• Description of the problem.

Coverage
Services are provided up to 5 years/160 000 km (100,000 mi), whichever comes first.

In the U.S., anyone driving the vehicle is covered. In Canada, a person driving the vehicle without permission from the owner is not covered.

Roadside Assistance is not a part of the New Vehicle Limited Warranty. Chevrolet and General Motors of Canada Limited reserve the right to make any changes or discontinue the Roadside Assistance program at any time without notification.

Chevrolet and General Motors of Canada Limited reserve the right to limit services or payment to an owner or driver if they decide the claims are made too often, or the same type of claim is made many times.

Services Provided
• Emergency Fuel Delivery: Delivery of enough fuel for the vehicle to get to the nearest service station.
• Lock-Out Service: Service to unlock the vehicle if you are locked out. A remote unlock may be available if you have OnStar. For security reasons, the driver must present identification before this service is given.
• Emergency Tow from a Public Road or Highway: Tow to the nearest Chevrolet dealer for warranty service, or if the vehicle was in a crash and cannot be driven. Assistance is also given when the vehicle is stuck in the sand, mud, or snow.
**Flat Tire Change:** Service to change a flat tire with the spare tire. The spare tire, if equipped, must be in good condition and properly inflated. It is the owner’s responsibility for the repair or replacement of the tire if it is not covered by the warranty.

**Battery Jump Start:** Service to jump start a dead battery.

**Services Not Included in Roadside Assistance**

- Impound towing caused by violation of any laws.
- Legal fines.
- Mounting, dismounting, or changing of snow tires, chains, or other traction devices.
- Towing or services for vehicles driven on a non-public road or highway.

**Services Specific to Canadian Purchased Vehicles**

- **Fuel Delivery:** Reimbursement is approximately $5 Canadian. Diesel fuel delivery may be restricted. Propane and other fuels are not provided through this service.
- **Lock-Out Service:** Vehicle registration is required.
- **Trip Routing Service:** Detailed maps of North America are provided when requested either with the most direct route or the most scenic route. There is a limit of six requests per year. Additional travel information is also available. Allow three weeks for delivery.

**Trip Interruption Benefits and Assistance:** Must be over 250 kilometers from where your trip was started to qualify. General Motors of Canada Limited requires pre-authorization, original detailed receipts, and a copy of the repair orders. Once authorization has been received, the Roadside Assistance advisor will help to make arrangements and explain how to receive payment.

**Alternative Service:** If assistance cannot be provided right away, the Roadside Assistance advisor may give permission to get local emergency road service. You will receive payment, up to $100, after sending the original receipt to Roadside Assistance. Mechanical failures may be covered, however any cost for parts and labor for repairs not covered by the warranty are the owner responsibility.
13-10 Customer Information

Roadside Assistance Program (Mexico)

As a new owner, your vehicle is automatically enrolled in the Roadside Assistance program. The services are available at no cost under the terms and conditions of the program. The Roadside Assistance program is not part of, or included, in the coverage provided by the New Vehicle Limited Warranty.

Roadside Assistance provides assistance to the driver and passengers while driving the vehicle within your city of residence or on any passable road in Mexico, the United States, and Canada. Services are subject to the limitations described in the following pages. Program coverage varies by country.

Roadside Assistance is available 24 hours a day, 365 days of the year.

This program expires two years from the date of the invoice for the vehicle, regardless of vehicle mileage and changes in vehicle ownership.

For more information about the renewal of this program at the end of its term, contact the Chevrolet Customer Assistance Center at 01-800-466-0800.

Services Provided

- **Flat Tire Change**: If unable to change a flat tire, Roadside Assistance will provide towing service to the nearest authorized Chevrolet dealership. It is the owner's responsibility for the repair or replacement of the tire. This service is limited to the transfer of the vehicle to the repair facility.

- **Emergency Fuel Delivery**: Delivery of enough fuel for the vehicle to get to the nearest service station.

- **Lock-Out Service**: Service to unlock the vehicle if you are locked out.

- **Battery Jump Start**: Service to jump start a dead battery.

- **Emergency Messages**: Transmission of urgent phone messages.

- **Emergency Calls**: Call for emergency services.

- **Dealership Location Assistance**: Information regarding addresses and telephone numbers for Chevrolet dealers.

Black plate (10,1)
**Emergency Towing:** Tow to the nearest dealer for warranty service if the vehicle cannot be driven.

If the vehicle is involved in an accident during the commission of a crime, administrative violation, or breach of traffic regulations, Roadside Assistance will not provide service. When the vehicle is not accessible to be towed, all maneuvers required to access it will be at the owner’s expense.

If the vehicle is in another city outside of your residence, Roadside Assistance is limited to moving the vehicle to the nearest dealer. If you would like the vehicle moved to a different dealer, you will be asked to cover the difference in cost at the time of the move.

If the vehicle cannot be received by the nearest Chevrolet dealer due to scheduling conflicts, the vehicle will be taken to a safe place where it will remain for up to 48 hours until it can be taken to the dealer. If the storage costs exceed the amount authorized, the owner is responsible to pay the difference at the time of service. Contact Roadside Assistance for more information on authorized amounts.

**Trip Interruption:** This service is provided if you are prevented from further usage of your vehicle while traveling and it is not possible for the nearest Chevrolet dealership to repair the vehicle the same day, requiring the vehicle to stay at the dealership for a night or more. If this happens, in addition to the previously listed services and prior to confirmation by the dealership, you are entitled to choose one of the following alternatives, within the limits of existing Roadside Assistance program guidelines. If the costs exceed the amount authorized for these services, you must pay the difference at the time of service.

Roadside Assistance will coordinate hotel accommodations for all vehicle travelers for up to two nights. A rental car will be provided for up to two days and the vehicle must be returned to its original destination, excluding vehicles with a carrying capacity greater than 3.5 tons.
**Complimentary Transportation for Vehicle Pick Up**: Transportation to pick up your vehicle after repairs are complete. Once the dealer has reported that the vehicle has been repaired, Roadside Assistance will provide bus or commercial airline one-way service (subject to availability) for the person designated by you to collect your vehicle at the dealership's location if you or the designated person are not in the same town or city as the dealership.

*These services are not provided for U.S. or Canada residents. All services provided in the U.S. and Canada are at the owner's expense and will be reimbursed by Roadside Assistance.

**Services Not Included in Roadside Assistance**

Roadside Assistance does not cover or reimburse services for the following:

- Events caused by fraud or bad faith by the driver.
- Vehicle immobilization situations due to a major force or unforeseen circumstances, such as natural phenomena of an extraordinary nature, earthquakes, volcanic eruptions, and other cyclonic storms.
- Vehicle immobilization situations arising from car accidents caused by the driver of the vehicle or third parties. This means any occurrence that causes physical injury to the occupants and/or the vehicle caused by external forces.
- Acts of terrorism, riot or uproar, armed forces or police actions which prevent timely delivery of assistance services.
Food service, beverages, telephone calls, or other extra costs. Accommodation costs apply only to Mexico per the terms and conditions of the Roadside Assistance program.

- Any damage to the vehicle without intent, derived from the services provided.
- Cost of towing a trailer when choosing a Chevrolet dealer that is nearest to the temporary storage facility for the disabled vehicle.
- Cost of all maneuvers required to access the vehicle when it is not available to be towed.
- Cost of fuel provided.

Routine vehicle repair costs are not covered by the Roadside Assistance program. For more information, see your new vehicle warranty.

Scheduling Service Appointments (U.S. and Canada)

When the vehicle requires warranty service, contact your dealer and request an appointment. By scheduling a service appointment and advising the service consultant of your transportation needs, your dealer can help minimize your inconvenience.

If the vehicle cannot be scheduled into the service department immediately, keep driving it until it can be scheduled for service, unless, of course, the problem is safety related. If it is, please call your dealership, let them know this, and ask for instructions.

If your dealer requests you to bring the vehicle for service, you are urged to do so as early in the work day as possible to allow for same-day repair.
13-14 Customer Information

Courtesy Transportation Program (U.S. and Canada)

To enhance your ownership experience, we and our participating dealers are proud to offer Courtesy Transportation, a customer support program for vehicles with the Bumper-to-Bumper (Base Warranty period in Canada), extended powertrain, and/or hybrid-specific warranties in both the U.S. and Canada.

Several Courtesy Transportation options are available to assist in reducing inconvenience when warranty repairs are required.

Courtesy Transportation is not a part of the New Vehicle Limited Warranty. A separate booklet entitled “Limited Warranty and Owner Assistance Information” furnished with each new vehicle provides detailed warranty coverage information.

Transportation Options

Warranty service can generally be completed while you wait. However, if you are unable to wait, GM helps to minimize inconvenience by providing several transportation options. Depending on the circumstances, your dealer can offer one of the following:

Shuttle Service

Shuttle service is the preferred means of offering Courtesy Transportation. Dealers may provide shuttle service to get you to your destination with minimal interruption of your daily schedule. This includes one-way or round-trip shuttle service within reasonable time and distance parameters of your dealer's area.

Public Transportation or Fuel Reimbursement

If the vehicle requires overnight warranty repairs, and public transportation is used instead of your dealer's shuttle service, the expense must be supported by original receipts and can only be up to the maximum amount allowed by GM for shuttle service. In addition, for U.S. customers, should you arrange transportation through a friend or relative, limited reimbursement for reasonable fuel expenses may be available. Claim amounts should reflect actual costs and be supported by original receipts. See your dealer for information regarding the allowance amounts for reimbursement of fuel or other transportation costs.
Customer Information 13-15

** Courtesy Rental Vehicle **

Your dealer may arrange to provide you with a courtesy rental vehicle or reimburse you for a rental vehicle that you obtain if the vehicle is kept for an overnight warranty repair. Rental reimbursement will be limited and must be supported by original receipts. This requires that you sign and complete a rental agreement and meet state/provincial, local, and rental vehicle provider requirements. Requirements vary and may include minimum age requirements, insurance coverage, credit card, etc. You are responsible for fuel usage charges and may also be responsible for taxes, levies, usage fees, excessive mileage, or rental usage beyond the completion of the repair.

It may not be possible to provide a like vehicle as a courtesy rental.

** Additional Program Information **

All program options, such as shuttle service, may not be available at every dealer. Please contact your dealer for specific information about availability. All Courtesy Transportation arrangements will be administered by appropriate dealer personnel.

*General Motors reserves the right to unilaterally modify, change, or discontinue Courtesy Transportation at any time and to resolve all questions of claim eligibility pursuant to the terms and conditions described herein at its sole discretion.*

** Collision Damage Repair (U.S. and Canada) **

If the vehicle is involved in a collision and it is damaged, have the damage repaired by a qualified technician using the proper equipment and quality replacement parts. Poorly performed collision repairs diminish the vehicle resale value, and safety performance can be compromised in subsequent collisions.

** Collision Parts **

Genuine GM Collision parts are new parts made with the same materials and construction methods as the parts with which the vehicle was originally built. Genuine GM Collision parts are the best choice to ensure that the vehicle's designed appearance, durability, and safety are preserved. The use of Genuine GM parts can help maintain the GM New Vehicle Limited Warranty.
Recycled original equipment parts may also be used for repair. These parts are typically removed from vehicles that were total losses in prior crashes. In most cases, the parts being recycled are from undamaged sections of the vehicle. A recycled original equipment GM part may be an acceptable choice to maintain the vehicle's originally designed appearance and safety performance; however, the history of these parts is not known. Such parts are not covered by the GM New Vehicle Limited Warranty, and any vehicle failure related to such parts is not covered by that warranty.

**Repair Facility**

GM also recommends that you choose a collision repair facility that meets your needs before you ever need collision repairs. Your dealer may have a collision repair center with GM-trained technicians and state-of-the-art equipment, or be able to recommend a collision repair center that has GM-trained technicians and comparable equipment.

**Insuring the Vehicle**

Protect your investment in the GM vehicle with comprehensive and collision insurance coverage. There are significant differences in the quality of coverage afforded by various insurance policy terms. Many insurance policies provide reduced protection to the GM vehicle by limiting compensation for damage repairs through the use of aftermarket collision parts. Some insurance companies will not specify aftermarket collision parts. When purchasing insurance, we recommend that you ensure that the vehicle will be repaired with GM original equipment collision parts. If such insurance coverage is not available from your current insurance carrier, consider switching to another insurance carrier.

If the vehicle is leased, the leasing company may require you to have insurance that ensures repairs with Genuine GM Original Equipment Manufacturer (OEM) parts or Genuine Manufacturer replacement parts. Read the lease carefully, as you may be charged at the end of the lease for poor quality repairs.
If a Crash Occurs

If there has been an injury, call emergency services for help. Do not leave the scene of a crash until all matters have been taken care of. Move the vehicle only if its position puts you in danger, or you are instructed to move it by a police officer.

Give only the necessary information to police and other parties involved in the crash.

For emergency towing see Roadside Assistance Program (U.S. and Canada) on page 13-7 or Roadside Assistance Program (Mexico) on page 13-10.

Gather the following information:

- Driver name, address, and telephone number.
- Driver license number.
- Owner name, address, and telephone number.
- Vehicle license plate number.
- Vehicle make, model, and model year.
- Vehicle Identification Number (VIN).
- Insurance company and policy number.
- General description of the damage to the other vehicle.

Choose a reputable repair facility that uses quality replacement parts. See “Collision Parts” earlier in this section.

If the airbag has inflated, see What Will You See after an Airbag Inflates? on page 3-24.

Managing the Vehicle Damage Repair Process

In the event that the vehicle requires damage repairs, GM recommends that you take an active role in its repair. If you have a pre-determined repair facility of choice, take the vehicle there, or have it towed there. Specify to the facility that any required replacement collision parts be original equipment parts, either new Genuine GM parts or recycled original GM parts. Remember, recycled parts will not be covered by the GM vehicle warranty.

Insurance pays the bill for the repair, but you must live with the repair. Depending on your policy limits, your insurance company may initially value the repair using aftermarket parts. Discuss this with the repair professional, and insist on Genuine GM parts. Remember, if the vehicle is leased, you may be obligated to have the vehicle repaired with Genuine GM parts, even if your insurance coverage does not pay the full cost.
13-18 Customer Information

If another party’s insurance company is paying for the repairs, you are not obligated to accept a repair valuation based on that insurance company’s collision policy repair limits, as you have no contractual limits with that company. In such cases, you can have control of the repair and parts choices as long as the cost stays within reasonable limits.

Reporting Safety Defects

Reporting Safety Defects to the United States Government

If you believe that your vehicle has a defect which could cause a crash or could cause injury or death, you should immediately inform the National Highway Traffic Safety Administration (NHTSA) in addition to notifying General Motors.

If NHTSA receives similar complaints, it may open an investigation, and if it finds that a safety defect exists in a group of vehicles, it may order a recall and remedy campaign.

However, NHTSA cannot become involved in individual problems between you, your dealer, or General Motors.

To contact NHTSA, you may call the Vehicle Safety Hotline toll-free at 1-888-327-4236 (TTY: 1-800-424-9153); go to http://www.safercar.gov; or write to:

Administrator, NHTSA
1200 New Jersey Avenue, S.E.
Washington, D.C. 20590

You can also obtain other information about motor vehicle safety from http://www.safercar.gov.

Reporting Safety Defects to the Canadian Government

If you live in Canada, and you believe that the vehicle has a safety defect, notify Transport Canada immediately, and notify General Motors of Canada Limited.

Vehicle Data Recording and Privacy

This GM vehicle has a number of sophisticated computers that record information about the vehicle’s performance and how it is driven. For example, the vehicle uses computer modules to monitor and control engine and transmission performance, to monitor the conditions for airbag deployment and deploy airbags in a crash, and, if so equipped, to provide antilock braking to help the driver control the vehicle. These modules may store data to help your dealer technician service the vehicle. Some modules may also store data about how you operate the vehicle, such as rate of fuel consumption or average speed. These modules may also retain the owner’s personal preferences, such as radio presets, seat positions, and temperature settings.

Event Data Recorders

This vehicle has an Event Data Recorder (EDR). The main purpose of an EDR is to record, in certain crash or near crash-like situations, such as an airbag deployment or hitting a road obstacle, data that will assist in understanding how a vehicle’s systems performed. The EDR is designed to record data related to vehicle dynamics and safety systems for a short period of time, typically 30 seconds or less. The EDR in this vehicle is designed to record such data as:

- How various systems in the vehicle were operating.
- Whether or not the driver and passenger safety belts were buckled/fastened.
- How far, if at all, the driver was pressing the accelerator and/or brake pedal.
- How fast the vehicle was traveling.
This data can help provide a better understanding of the circumstances in which crashes and injuries occur.

**Important:** EDR data is recorded by the vehicle only if a non-trivial crash situation occurs; no data is recorded by the EDR under normal driving conditions and no personal data (e.g., name, gender, age, and crash location) is recorded. However, other parties, such as law enforcement, could combine the EDR data with the type of personally identifying data routinely acquired during a crash investigation.

To read data recorded by an EDR, special equipment is required, and access to the vehicle or the EDR is needed. In addition to the vehicle manufacturer, other parties, such as law enforcement, that have the special equipment, can read the information if they have access to the vehicle or the EDR.

GM will not access this data or share it with others except: with the consent of the vehicle owner or, if the vehicle is leased, with the consent of the lessee; in response to an official request by police or similar government office; as part of GM’s defense of litigation through the discovery process; or, as required by law. Data that GM collects or receives may also be used for GM research needs or may be made available to others for research purposes, where a need is shown and the data is not tied to a specific vehicle or vehicle owner.

**OnStar®**

If the vehicle is equipped with an active OnStar system, that system may also record data in crash or near crash-like situations. The OnStar Terms and Conditions provides information on data collection and use and is available at www.onstar.com (U.S.) or www.onstar.ca (Canada), or by pressing the Q button and speaking to an advisor. See OnStar Overview on page 14-1.

**Radio Frequency Identification (RFID)**

RFID technology is used in some vehicles for functions such as tire pressure monitoring and ignition system security, as well as in connection with conveniences such as key fobs for remote door locking/unlocking and starting, and in-vehicle transmitters for garage door openers. RFID technology in GM vehicles does not use or record personal information or link with any other GM system containing personal information.
Radio Frequency Statement

This vehicle has systems that operate on a radio frequency that comply with Part 15 of the Federal Communications Commission (FCC) rules and with Industry Canada Standards RSS-GEN/210/220/310.

Operation is subject to the following two conditions:
1. The device may not cause harmful interference.
2. The device must accept any interference received, including interference that may cause undesired operation of the device.

Changes or modifications to any of these systems by other than an authorized service facility could void authorization to use this equipment.
If equipped, this vehicle has a comprehensive, in-vehicle system that can connect to a live Advisor for Emergency, Security, Navigation, Connection, and Diagnostic Services.

The OnStar system status light is next to the OnStar buttons. If the status light is:

- Solid Green: System is ready.
- Flashing Green: On a call.
- Red: Indicates a problem.

Push or call 1-888-4-ONSTAR (1-888-466-7827) to speak to an Advisor.

Push to:

- Make a call, end a call, or answer an incoming call.
- Give OnStar Hands-Free Calling voice commands.
- Give OnStar Turn-by-Turn Navigation voice commands. Requires the available Directions and Connections service plan.
14-2 OnStar

Push to connect to a live Advisor to:

- Verify account information or update contact information.
- Get driving directions. Requires the available Directions and Connections service plan.
- Receive On-Demand Diagnostics for a check on the vehicle’s key operating systems.
- Receive Roadside Assistance.

Push to get a priority connection to an Emergency Advisor available 24/7 to:

- Get help for an emergency.
- Be a Good Samaritan or respond to an AMBER Alert.
- Get crisis assistance and evacuation routes.

OnStar Services

Emergency

With Automatic Crash Response, the built-in system can automatically connect to help in a crash even if you cannot ask for it.

Push to connect to an Emergency Advisor. GPS technology is used to identify the vehicle location and can provide critical information to emergency personnel. The Advisor is also trained to offer critical assistance in emergency situations.

Security

OnStar provides services like Stolen Vehicle Assistance, Remote Ignition Block, and Roadside Assistance, if the vehicle is equipped with these services. OnStar can unlock the vehicle doors remotely, if it is equipped with automatic door locks, and can help police locate the vehicle if it is stolen.

Navigation

OnStar navigation requires the Directions and Connections service plan.

Push to receive directions or have them sent to the vehicle navigation screen. Destinations can also be forwarded to the vehicle from Google Maps™ or MapQuest.com. The OnStar mapping database is continuously updated. Visit www.onstar.com for coverage maps.

Turn-by-Turn Navigation

1. Push to connect to a live Advisor.
2. Request directions.
3. Directions are downloaded to the vehicle.
4. Follow the voice-guided commands.
Using Voice Commands During a Planned Route

Cancel Route

Route Preview

2. Say “Route Preview.” System responds with the next three maneuvers.

Repeat

2. Say “Repeat.” System responds with the last direction given, then responds with “OnStar ready,” then a tone.

Get My Destination

2. Say “Get my destination.” System responds with miles to the destination, then responds with “OnStar ready,” then a tone.

Other Navigation Services Available from OnStar

OnStar eNav: Allows subscribers to send destinations from Google Maps and MapQuest.com to their Turn-by-Turn Navigation or screen-based navigation system. When ready, the directions will be downloaded to the vehicle.

Destination Download: Push 📈, then request the Advisor to download directions to the navigation system in the vehicle. After the call ends, push the “Go” button on the navigation screen to begin driving directions.

Destinations can also be downloaded on the go. For information about eNav, Destination Download, and coverage maps visit www.onstar.com.
14-4 OnStar

Connections
OnStar Hands-Free Calling allows calls to be made and received from the vehicle. The vehicle can also be controlled from a cell phone through the OnStar mobile app. See www.onstar.com for coverage maps.

Hands-Free Calling
2. Say “Dial.” System responds: “Please say the name or number to call.”
3. Say the entire number without pausing, including a “1” and the area code. System responds: “OK calling.”

Retrieve My Number
2. Say “My Number.” System responds: “Your OnStar Hands-Free Calling number is.”

End a Call
Push 📞. System responds: “Call ended.”

Store a Name Tag for Speed Dialing
2. Say “Store.” System responds: “Please say the number you would like to store.”
3. Say the entire number without pausing. System responds: “Please say the name tag.”

5. Say “Yes” or “No” to try again. System responds: “OK, storing <name tag>.”

Place a Call Using a Stored Number
2. Say “Call <name tag>.” System responds: “OK, calling <name tag>.”

Verify Minutes and Expiration
Push 📞 and say “minutes” then “verify” to check how many minutes remain and their expiration date.
**OnStar Mobile App**

With an iPhone® or Android™-based mobile device, an OnStar mobile app can be downloaded. The vehicle can be remote started, if equipped, or the doors can be unlocked from anywhere there is cell phone service. It can also check the fuel level, tire pressure, and oil life. It can connect to an OnStar Advisor anytime. For OnStar mobile app compatibility or further information, see www.onstar.com.

**Diagnostics**

OnStar Vehicle Diagnostics will perform a vehicle check every month. It will check the engine, transmission, antilock brakes, and major vehicle systems. It also checks the tire pressures, if the vehicle is equipped with the Tire Pressure Monitoring System. If a diagnostics check is needed between e-mails, push ☑️, and an Advisor can run a check.

**OnStar Additional Information**

**Transferring Service**

Push ☑️ to request account transfer eligibility information. The Advisor can assist in canceling or removing account information. If OnStar receives information that vehicle ownership has changed, OnStar may send a voice message to the vehicle, requesting updated account information.

**Reactivation for Subsequent Owners**

Push ☑️ and follow the prompts to speak to an Advisor as soon as possible after acquiring the vehicle. The Advisor will update vehicle records and will explain the OnStar service offers and options available.

**How OnStar Service Works**

Automatic Crash Response, Emergency Services, Crisis Assist, Stolen Vehicle Assistance, Vehicle Diagnostics, Remote Door Unlock, Roadside Assistance, Turn-by-Turn Navigation, and Hands-Free Calling are available on most vehicles. Not all OnStar services are available everywhere or on all vehicles. For more information, a full description of OnStar services, system limitations, and OnStar terms and conditions, see www.onstar.com (U.S.) or www.onstar.ca (Canada); contact OnStar at 1-888-4-ONSTAR (1-888-466-7827) or TTY 1-877-248-2080; or push ☑️ to speak with an Advisor. OnStar services require a vehicle electrical system, wireless service, and GPS satellite technologies to be available and operating for features to function properly. These systems may not operate if the battery is discharged or disconnected.
14-6 OnStar

OnStar service cannot work unless your vehicle is in a place where OnStar has an agreement with a wireless service provider for service in that area, and the wireless service provider has coverage, network capacity, reception, and technology compatible with OnStar’s service. Service involving location information about the vehicle cannot work unless GPS signals are available, unobstructed, and compatible with the OnStar hardware. OnStar service may not work if the OnStar equipment is not properly installed or it has not been properly maintained. If equipment or software is added, connected, or modified, OnStar service may not work. Other problems beyond OnStar’s control may prevent service such as hills, tall buildings, tunnels, weather, electrical system design and architecture of the vehicle, damage to the vehicle in a crash, or wireless phone network congestion or jamming.

Services for People with Disabilities
Advisors provide services to help subscribers with physical disabilities and medical conditions.

Push Q for help with:
- Locating a gas station with an attendant to pump gas.
- Finding a hotel, restaurant, etc., that meets accessibility needs.
- Providing directions to the closest hospital or pharmacy in urgent situations.

TTY Users
OnStar has the ability to communicate to the deaf, hard-of-hearing, or speech-impaired customers while in the vehicle. The available dealer-installed TTY system can provide in-vehicle access to all of the OnStar services, except Virtual Advisor and OnStar Turn-by-Turn Navigation.

Onstar.com
The website provides access to account information, manages the OnStar subscription, and allows viewing of videos of each service. Get subscription plan pricing and sign up for OnStar Vehicle Diagnostics. Click on the “My Account” tab on the home page.
**OnStar Personal Identification Number (PIN)**
A PIN is needed to access some of the OnStar services, like Remote Door Unlock and Stolen Vehicle Assistance. You will be prompted to change the PIN the first time when speaking with an Advisor. To change the OnStar PIN, call OnStar and provide the Advisor with the current number.

**Warranty**
OnStar equipment may be warranted as part of the new-vehicle limited warranty. The manufacturer of the vehicle furnishes detailed warranty information.

**Languages**
The vehicle can be programmed to respond in French or Spanish. Push and ask an Advisor. Advisors can speak French or Spanish.

**Potential Issues**
Some OnStar services are disabled after five days. OnStar cannot perform Remote Door Unlock or Stolen Vehicle Assistance after the vehicle has been off continuously for five days. After five days, OnStar can contact Roadside Assistance and a locksmith to help gain access to the vehicle.

**Global Positioning System (GPS)**
- Obstruction of the GPS can occur in a large city with tall buildings; in parking garages; around airports; in tunnels, underpasses, or parking garages; or in an area with very dense trees. If GPS signals are not available, the OnStar system should still operate to call OnStar. However, OnStar could have difficulty identifying the exact location.

- In emergency situations, OnStar can use the last stored GPS location to send to emergency responders.

- A temporary loss of GPS can cause loss of the ability to send a Turn-by-Turn Navigation route. The Advisor may give a verbal route or may ask for a call back after the vehicle is driven into an open area.

**Cellular and GPS Antennas**
Avoid placing items over or near the antenna to prevent blocking cellular and GPS signal reception. Cellular reception is required for OnStar to send remote signals to the vehicle.
Unable to Connect to OnStar Message
If there is limited cellular coverage or the cellular network has reached maximum capacity, this message may come on. Push $\mathbb{Q}$ to try the call again or try again after driving a few miles into another cellular area.

Vehicle and Power Issues
OnStar services require a vehicle electrical system, wireless service, and GPS satellite technologies to be available and operating for features to function properly. These systems may not operate if the battery is discharged or disconnected.

Add-on Electrical Equipment
The OnStar system is integrated into the electrical architecture of the vehicle. Do not add any electrical equipment. See Add-On Electrical Equipment on page 9-68. Added electrical equipment may interfere with the operation of the OnStar system and cause it to not operate.

Privacy
The complete OnStar Privacy Statement may be found at www.onstar.com. Privacy-sensitive users of wireless communications are cautioned that the privacy of any information sent via wireless cellular communications cannot be assured. Third parties may unlawfully intercept or access transmissions and private communications without consent.
